SWIMS Project Summary

General Project Information

Project ID: LPT-466-14

Name: LONG LAKE PROT & REHAB DIST: LMI-Waterfront Projects Design & Installation and Alum Dosage Study

Type: Lakes Grant

Subtype: Lake Protection Grant

Status: COMPLETE

Start Date: 10/1/2013

End Date: 12/31/2020

Purpose: Long Lake P&R District is sponsoring a Lake Protection grant to protect and improve Long Lake water quality by designing and implementing shoreline restoration and runoff reduction practices. The project also includes an Alum dosage study.

Specific project tasks include: 1) Shoreline design/restoration on approximately 10 shoreline sites; 2) Design/installation of rain gardens, rock gardens, rock pits, and swales; 3) Alum dosage study.

Shoreline restorations will follow standards set forth in NR 191.24(3) unless mutually agreed to in writing with the regional lake coordinator before implementation occurs. Shoreline restorations using grant funding for plants or labor require a Department approved restrictive covenant that permanently establishes the vegetative buffer on the parcel. This project includes BMPs such as rain gardens and shoreline stabilization. Maintenance, operation, and protection will be specified in a ten-year contract for each BMP site. The Department may perform site inspection and/or monitoring.

Project deliverables include: a report and map summarizing project activities, including documenting linear feet of shoreline stabilized, square feet of shoreline buffer restored, and number of runoff reduction sites installed; individual property shoreline restoration/stabilization plans/maps; pre/post photos of funded restorations; list of property owners and parcels committed to covenants and/or contracts; and Alum dosage report.

Special conditions: Applicable water regulation and/or county zoning permits must be issued before construction activities commence.

This scope summarizes the project detail provided in the application and does not negate tasks/deliverables described therein. Data, records, and reports, including GIS-based maps, and digital images, must be submitted to the Department in a format specified by the regional Lake Coordinator.

SWIMS Project Summary

Long Lake, Wisconsin: Analysis of Phosphorus Sources, Loading Reduction Scenarios, and Alum Dosage and Application Strategies	The objectives of these investigations are several-fold: 1. re-examine the P budget and empirical steady-state models to evaluate and project water quality improvement as a result of internal P loading control 2. estimate annual and summer lakewide internal P loading from stratification and dissolved oxygen information presented in Polk County and Harmony Environmental (2013) for input into empirical steady-state models, 3. detail the development of thermal stratification using thermistors (i.e., temperature data loggers) deployed in the lake at ~ 0.5-m to 1-m intervals to record temperature hourly over the course of the summer to better document temporary stratification patterns and examine bottom water dissolved oxygen dynamics to improve lakewide internal P loading estimates for incorporation into empirical models, 4. and refine Al dosage and application strategies to improve longevity.		10/15/2017	
Runoff Reduction Plan [Rain garden]	The Runoff Reduction Plan Set provides top views and cross sections of the rain gardens and rock infiltration pits to be installed.	Tomma Freunds Schuh	4/24/2020
