

Wisconsin Department of Natural Resources

SWIMS Project Summary

General Project Information

Project ID: NOR_01_CMP09 ATTAINS

Name: Impaired waters listing evaluation and post-monitoring for biological recovery of Newton Creek (2843650) and Hog Island Inlet (28743650)

Type: TMDL/303d Projects

Subtype: Evaluate for Delisting

Status: FINAL_RPT

Start Date: 7/1/2008

End Date: 6/30/2011

Purpose: This project involves evaluating 303d waters including Newton Creek and Hog Island Inlet which is required for proposing removal of waters from the state's impaired waters list. To complete necessary monitoring as required by EPA.

Objective: To determine if Newton Creek and Hog Island Inlet are meeting their designated or attainable uses (as described by Chapter NR 102) after recent remediation efforts to remove aquatic toxicity impairments caused by metals, pH's, and petroleum pollutants. Post-monitoring evaluation of the biological recovery of these waterbodies will further determine the overall success of remediation efforts towards substantially improving water quality and whether or not these waterbodies may be removed from the 303(d) list.

Comments: Project Category 1: Performance Measure SP 12 (Measure W) for high priority federal reporting purposes.

Outcome: Newton Creek: Macroinvertebrates: contracted out to LSRI to sample 3 sites, spring and fall, in 2008, 2009, 2010. Sampling complete by December 1 each year.
Fish Community: sample 2 sites once/yr in 2008, 2009, 2010. To be completed by September 30th each yr with data entry complete by Dec. 31st.
Water quality monitoring: 2 sites, non-event and event sampling.

Hog Island Inlet:
Macroinvertebrates: contracted out to LSRI to sample 4 sites once/yr in 2009 and 2010. Complete sampling by Sept. 30th each yr.
Fish Community: sample 3 sites once/yr by Mini-fyke netting in 2008 - 2010. Electrofish shoreline with mini-boomshocker in 2008 and 2010. Fish sampling complete by Sept 30th each year with data entry complete by Dec 31st.
Macrophyte community: Conduct point-intercept surveys of aquatic plants in 2008 - 2010 by August 31 each yr.
Water quality monitoring conducted on Hog Island in conjunction with sampling on Newton Creek.

Final Report:
Write a final report to summarize all findings and to make comparisons with historic data by June 30, 2011. Report will discuss/evaluate the overall biological and physical recovery of Newton Creek and Hog Island Inlet and make recommendations for future management in regards to status on 303d list.

303(d) Listing Evaluation and Post-Monitoring for Biological Recovery of Newton Creek (2843650) and Hog Island Inlet (2751220) after Remediation Action			4/11/2011	
Hog Island Inlet Photo	Hog Island Inlet Photo	Helmuth, Lisa	1/2/2012	
NOR1_09		Cordell H. Manz	3/25/2008	Collecting 36 samples for PAH's for 2 sites over 3 years will cost ~ \$10,206. This would cost ~\$3,402 for 2008. Cost of project in 2008 without PAH sampling would be \$15,283, if part and not all of project can be funded. Cutting all water chemistry sampling could reduce pricetag more if absolutely necessary.
Newton Creek and Hog Island Inlet Post-Remediation Assessment (2008 - 2014) Final Report	Project final report	Joe Graham and Craig Roesler	8/24/2015	Final report for monitoring of macroinvertebrates, fish, water quality, sediment quality, and macrophytes from 2008 2014 in Newton Creek and Hog Island Inlet to assess the condition of these waters and biological recovery following remediation of contaminated sediments in 2005.
