

Hustisford-Hubbard Sanitary District
Dodge County
January 18, 1978

Wildcat Creek - Length = 12.0 miles
Gradient = 21.0 feet per mile

The Hustisford-Hubbard Sanitary District has proposed Wildcat Creek as a possible discharge site. Wildcat Creek originates east of Iron Ridge and flows southwesterly to join the Rock River below the dams at Hustisford. Several species of the fish may enter the creek during the spring spawning run. Minnows, chubs, and sticklebacks inhabit various reaches of the stream. Wildcat Creek is subject to fluctuating flows and heavy siltation in its lower reaches.

Recommendation

From the Hustisford-Hubbard Sanitary District proposed discharge site and for the remainder of Wildcat Creek the classification should be continuous fish and aquatic life.

The above recommendations represent a concurrence of opinion of the stream classification team who are as follows:

Robert Weber - District Engineer
Jim Congdon - Area Fish Manager
Tom Bainbridge - District Biologist
Roger Schlessler - Natural Resources Specialist

Respectfully submitted,

Thomas Bainbridge
District Biologist
