Facility Name NORTH PARK POTW

Receiving Water UNNAMED TRIB. TO L. MICIGAN

Evaluated by WU WOLFE

This stream classification is not included in the revised code because (select one):

The discharger is no longer at this location.

A new classification has resulted in a full fish and aquatic life designation.
New survey date _____ Please provide copy of new classification report.

This receiving water should be added to the database and to the code. Specify information, as it should be included in code.

Other (please explain)
THIS FACILITY HAS BEEN ABANDONED. THE
SERVICE AREA IS NOW SERVED BY THE
RACINE POTW

R. Johnson

North Park, Racine County
Tributary to Lake Michigan

The effluent from the North Park wastewater treatment plant discharges to a small non-continuous tributary of Lake Michigan. The North Park tributary originates in Section 28, Caladonia Township, and flows approximately 1.5 miles to Lake Michigan north of Wind Point. However, the North Park Discharge is less than one tenth of a mile above Lake Michigan.

The North Park tributary flows through a low density residential and wooded area. The substrate consists of gravel and rock. The fishery is limited by fluctuating water levels in the upper reaches, however, salmonoid fishes do run up the stream in the fall.

The stream is utilized recreationally for snagging and as a playground for neighborhood children.

Recommendations

The North Park tributary shall be classified as a non-continuous intermediate aquatic life stream. Lake Michigan shall be classified as a lake.
