

Date 6/26/2000

Facility Name STURTEVANT POTW

Receiving Water UNNAMED TRIBUTARY TO PIKE RIVER

Evaluated by LW Wawrzyn

This stream classification is not included in the revised code because (select one):

The discharger is no longer at this location.

A new classification has resulted in a full fish and aquatic life designation.
New survey date _____ Please provide copy of new classification report.

This receiving water should be added to the database and to the code. Specify information, as it should be included in code.

Other (please explain)

THIS FACILITY HAS BEEN ABANDONED AND NO
LONGER DISCHARGES TO THIS STREAM

Sturtevant, Racine County

The effluent from the Sturtevant Wastewater Treatment Plant is discharged to a ditch which has a $7Q_{10}$ of 0 cfs. The ditch originates west of the treatment plant and flows east for approximately 2.5 miles before entering the Pike River. Both the ditch and the Pike River have had alterations to their channels and flow through open, cultivated land with relatively little stream bank protection.

The treatment plant outfall is approximately one mile upstream of the confluence with the Pike River. St. Bonaventure School discharges their effluent to a ditch which enters the main ditch just upstream of the treatment plant outfall. S. C. Johnson and Sons, Inc. discharges cooling water at a point approximately 0.75 miles upstream of the confluence with the Pike River. The major portion of the flow is from S. C. Johnson and Sons, Inc.

An electrofishing survey conducted by Department of Natural Resources personnel in September, 1975 near the Chicago and Northwestern Railroad bridge, collected the following fish: brown bullheads, fathead minnows, green sunfish, and creek chubs. The Pike River is managed for forage species of fish only.

Hoods Creek is another small stream in the area, located about one mile north of Sturtevant.

Recommendations

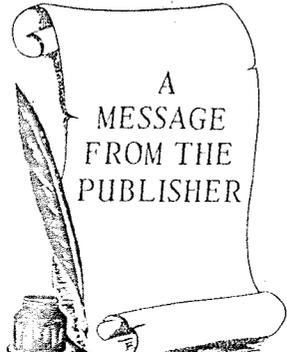

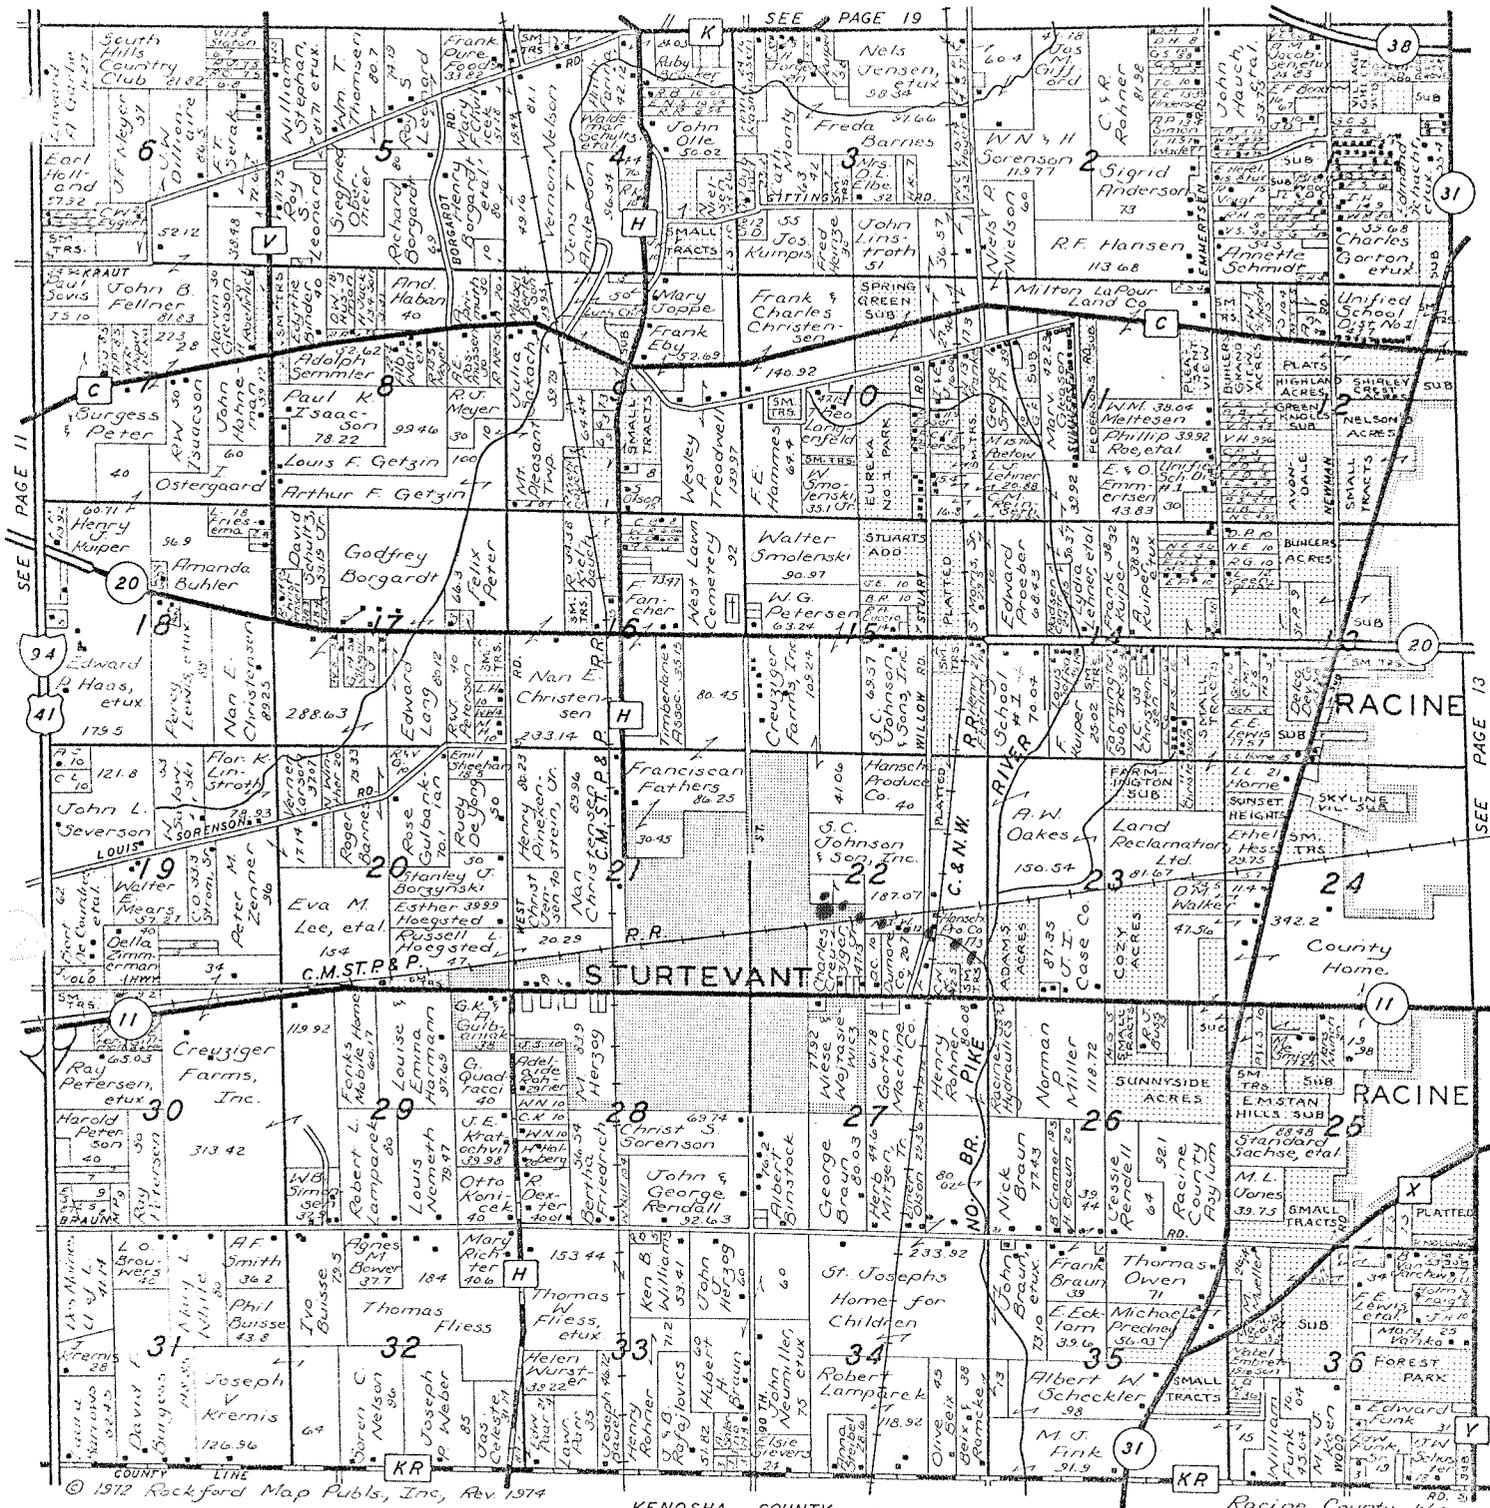

The section of the ditch upstream of the Sturtevant Wastewater Treatment Plant outfall shall be classified as a non-continuous, agricultural ditch. The section of the ditch from the treatment plant outfall to the Chicago and Northwestern Railroad bridge shall be classified as an effluent ditch. The section of the ditch from the railroad bridge to the confluence with the Pike River shall be classified as a continuous intermediate aquatic life stream. The Pike River shall be classified as a continuous fish and aquatic life stream.
