6. Summary of Project Challenges. (Space will expand to fit your text.)

Securing necessary permits for the project was the greatest challenge, due to the nature of the project. Construction during the fall of 2014 went well other than final restoration was occurring during some of the first snowfalls. The landscaper used pneumatic staple guns to install the erosion mat in those conditions. The stream restoration work held up very well during the spring thaw of 2015. One significant washout was discovered near station 10+70 caused by the adjacent wetland spilling over the stream bank at that location. The contractor repaired with topsoil, seed and erosion mat in June, 2015 per discussion with DNR staff. In August, 2015, the same washout re-appeared in the same location due to the wetland overtopping. DNR allowed placement of small rip-rap to be placed in washout and was restored with topsoil, seed and erosion mat. Photos of this washout and the repair are included with this final report. Overall, the site is looking great heading into its second full growing season in 2016.
