State of Wisconsin Runoff Management Section-WT/3 Department of Natural Resources 101 South Webster Street Madison, WI 53703

PO Box 7921 or Madison WI 53707-7921 Targeted Runoff Management (TRM) Grant Program Small-Scale Agricultural Application

Form 8700-300 (R 1/15)

Page 1 of 13

Notice: This application form template was created by the Wisconsin Department of Natural Resources. Application is hereby made to the Wisconsin Department of Natural Resources, Bureau of Watershed Management, for grant assistance consistent with s. 281.65, Wis. Stats., and Chapters NR 153 and NR 154, Wis. Adm. Code. Collection of this information is authorized under the authority of s. 281.65, Wis. Stats. Personal information collected will be used for administrative purposes and may be provided to requesters to the extent required by Wisconsin's Open Records Law [ss. 19.31 - 19.39, Wis. Stats.]. Unless otherwise noted, all citations refer to Wisconsin Administrative Code.

Please read the <u>instructions</u> prior to completion of this form. Complete all sections as applicable. Refer to the instructions for attachments.

Refer to the instructions for attachments.

A. Project Category: Total Maximum Da	ily Load	(TMDL) or Nor	-TMDL				
1. TMDL Project: The project mus	t meet a	ll of the following	g criteria:				

The project is in a geographical area covered by an EPA-approved TMDL.

 The project addresses the most critical nonpoint pollution sources of the agricultural nonpoint pollutants identified in the TMDL document.

Provide the title of the TMDL report that this project implements. (TMDL link: <a href="http://dnr.wi.gov/topic/tmdls/tmdlreports.html">http://dnr.wi.gov/topic/tmdls/tmdlreports.html</a>).

RECEIVED

Provide a link to the report, if available.

APR 1 6 2015

Provide the document page number(s) that identify the pollutants and sources being addressed by this project.

2. Non-TMDL Project: The project must be designed to achieve attainment of the NR 151 agricultural performance standards and prohibitions.

 Outstanding or Exceptional Resource Waters (ORW/ERW), Area of Special Natural Resource Interest (ASNRI) - To locate ASNRI using DNR's Surface Water Data Viewer go to http://apwmad0d1600/SL/Viewer.html?Viewer=SWDV&runWorkflow=DesignatedWaters. Name of Applicable ORW/ERW or ASNRI: ASNRI Endangered Threatened or Special Concern Water, East Twin River 3. Not Fully Supporting Uses or NPS Ranking of High or Medium. 4. Surface Water Quality Bonus Points: Federal NPS Program Watershed Project Funding Eligibility Check this box if the project meets all of the following criteria: The project addresses a nonpoint source impaired waterbody listed on the most current EPA-approved Section 303(d) list of impaired waters or a nonpoint source threatened unimpaired/high quality water. • The project is located upstream of and in the same 12-digit hydrologic unit (sub-watershed) as the 303(d) listed water or the unimpaired/high quality water. (Refer to Attachment A and http://dnrmaps.wi.gov/SL/?Viewer=SWDV for assistance.) • The project implements the goals and recommendations of an EPA-approved watershed-based "9 key element" plan. • The project controls the same NPS pollutants which are impairing the 303(d) listed waterbody or threatening the unimpaired/ high quality water. The project may be eligible for Federal NPS Program (Clean Water Act Section 319) Watershed Project Funding. (Refer to Attachment C of the application instructions for a list of eligible plans or link to map and plans at: http://dnr.wi.gov/water/9kemp/.) Provide the title of the EPA-approved nine key element plan this project implements. Groundwater Considerations For assistance with this section, consult the local DNR Drinking Water and Groundwater Specialist (http://dnr.wi.gov/topic/drinkingwater/documents/countycontacts.pdf) or the County Extension Office. Attach supporting documentation. Exceeds Groundwater Enforcement Standard Pollutant Causing Impairment: Exceeds Groundwater Preventive Action Limit Pollutant Causing Impairment: 7. Groundwater Susceptible to Contamination by Agricultural Nonpoint Source Pollutants E. Drinking Water Bonus Points: Yes Check this box if the project water quality goals identified above relate to the reduction of nonpoint source contaminants in X community or non-community public drinking water supplies. This includes any of the following: Municipal water supplies governed by chs. NR 809 and 811; Other-Than-Municipal (OTM) water supplies governed by chs. 809 and 811; Non-Transient water supplies governed by chs. NR 809 and 812; Transient water supplies governed by chs. NR 809 and 812. 1. If "Yes" and you checked box 5, 6, or 7 above, then mark a, b or c below and move on to question F. (You will need assistance from your local DNR Nonpoint Source Coordinator (http://dnr.wi.gov/topic/nonpoint/NPScontacts.html) or Water Supply Specialist (http://dnr.wi.gov/topic/drinkingwater/documents/countycontacts.pdf) to answer.) Check this box if the project is located: within the wellhead protection area of a municipal well, or within 1,200 feet of a municipal well for which a wellhead protection area is not delineated, or within 1,200 feet of an "Other-Than-Municipal (OTM)" water supply well, or within 1,200 feet of a non-transient water supply well Check this box if the project is located within 200 feet of Transient water supply well. ( ) b. Check this box if you did not select a or b. ( ) c.

<sup>2.</sup> If "Yes" and you checked box 1, 2, 3, or 4 for surface water considerations above, then place a check mark next to the drainage area where the project is located (see below).

F. Nature of the Water Quality Impact. Check the box if the states the project site.	ment applies to receiving waters that are being affected by
1. General water quality impacts. The receiving waters exp pollution sources. Cause and effect relationships between or impossible to establish. (Note: This may be chosen if 1,	the impairments and the specific site to be funded are difficult
Site-specific degradation. Site-specific impacts on receive such that a cause and effect relationship is clearly evident. Quality Needs.)	ving waters from the site to be funded are observable or measurable. (Note: This may be chosen if 1, 3, 4, 5 or 6 is checked in D. Water
Supporting information, such as data summaries or ph	otos, is attached. (Required to earn credit for statement 2.)
3. Threats. There are no nonpoint source impacts observed a source is perceived to be a threat. (Note: This may be chosen	or measured in receiving waters but the existence of the pollution sen if 2. or 7. is checked in D. Water Quality Needs.)
G. Project - Describe the water quality problem, the solution being	proposed and the expected environmental improvements.
surface or ground water, frequency, magnitude and/or duration (Recommendation: attach photos of pollution source areas, powater and mention photos here.)  Under this East Twin River Watershed project, the BMF 85 cows, 50 heifers and 15 calves, which will give Peka land use in the East Twin River watershed. Nonpoint so not ranked for lakes and high for groundwater and there to the watershed include sediment, nitrogen, phosphorus resulting in the potential of water quality degradation. T list for total phosphorus. The East Twin River flows appand there are intermittent streams as well on the Western surrounding the project site, 62.2 are fields covered by tinclude DP1 (5.6 ac), DP2 (5.5 ac), DP3 (19.5 ac), DP4 attached Section Map). As per the NMP, all fields have ton/acre spring surface manure application. DP3 is also application. Fields DP4, DP5 and DP6 are all no till with	respect site? What are all of the Performance Standards & ressed on the site? How does the site impact water quality? The distance(s) between source(s) and discharge points or areas to not discharge(s), etc. What is the current, estimated pollutant load? Dilution conveyance to waters of the state and the affected receiving P NR 154.04(3) Manure Storage System is being planned for arek 7 months of storage. Agriculture makes up 68% of the nurce pollution in this watershed is ranked high for streams, affore has an overall rank of high. Nonpoint source pollutants and manure. The pollutants are all found in manure runoff, the East Twin River has been proposed for the 2014 303(d) proximately 500 meters to the Southeast of the project site in side of the property. Of the 80 acres of property the Pekarek Nutrient Management Plan (NMP). These fields (12 ac), DP5 (8.2 ac), DP6 (3.1 ac) and DP7 (8.3 AC) (See a 4% slope. DP 1 and DP 2 have fall MB plow tillage and 20 fall MB plow tillage with 35 tons/acre winter surface manure the 15 tons/acre summer surface application. DP7 has fall MB oplication. Both DP1 and DP2 are SWQMA located 0-300

the water table. There are winter spreading restrictions in DP3, DP4, DP5, DP6 and DP7 if the field slopes are >9% and crops are not contoured; DP5 also has a section that cannot be winter spread. The topographic map included shows the path of potential runoff to East Twin River, intermittent streams, and the waterbody to the North of DP 6. These waterbodies are vulnerable to pollution in the heavily agriculture landscape. The long winter months when the ground is frozen as well as times of saturation in spring and fall heighten the risk of water quality degradation when inadequate manure storage facilities are present. The NMP states that DP3 is currently winter surface applied with 35 tons/acre, which could exacerbate water quality impairment, as its slopes face the intermittent streams on the

Page 9 of 13

TRM Grant Project Name:
Delmar Pekarek Manure Storage

Northwest of the property. In addition, Karst topography is prevalent in the landscape of Kewaunee County, limiting manure spreading in sensitive areas. Appropriately sized manure storage will eliminate the need for daily spreading/tiling, further protecting these sensitive areas in the landscape.

#### 2. Describe the project.

What is this project? What pollution problem(s) described above will be addressed with this project and how? How much of the pollution problem(s) associated with this site/operation will this project address? Which of the NR 151 PS&Ps or TMDL goals identified above will this project address? Which, if any, will remain to be addressed (and why)? Will the remaining PS&Ps be addressed with other funding sources in the same timeframe as this project or will they need to be addressed in subsequent years/grants?

The LWCD is proposing to construct a concrete lined manure storage to collect all manure and milk house waste from the farm. This will allow proper manure storage until spreading occurs and prevents potential runoff. Pollution will be addressed by storing all waste/manure in an USDA/NRCS constructed manure storage. BMP's installed will address manure storage (309 gallons) and milkhouse waste (400 gal/day). The storage size will be 128x129x8 feet deep. The amount of manure and wastewater generated is 570,084 gallons. There are currently 177 animal units; no expansions are planned for now or in the future. Pekarek is currently following a 590 nutrient management plan and operates 62.2 acres of farmland. This grant will address all pollution problems at the site.

#### 3. Describe the expected environmental improvements.

How effective will this project be in solving the pollution problem(s) and water quality impacts described above? What is the expected percent reduction in pollutant loading or pollution potential after this project is completed? What is the compliance level with NR 151 PS&Ps that will be achieved with completion of this project and what will remain to be addressed? What is the potential for water quality improvement of the receiving water?

Through the construction of an USDA/NRCS approved 313 manure storage, all nutrients/manure will be contained and they will no longer be discharging to sensitive areas. A concrete lined manure storage will allow for proper nutrient application of manure/waste according to the Nutrient Management Plan.

Phosphorus and Nitrogen will be decreased and managed through a Nutrient Management Plan. Decrease in nutrient runoff into surface waters, ditches and groundwater will result after these practices are installed. The manure storage will also allow storage of nutrients during winter months and saturated fields in the spring/fall resulting in a lower chance of groundwater contamination.

#### H. Cost-Effectiveness

 a. Explain how the proposed best management practices are a reasonable means to achieve NR 151 Performance Standards and Prohibitions (PS&Ps) or TMDL water quality goals. Include factors such as cost-effectiveness, site feasibility, available technical standards, and practicality. If applicable, include information to demonstrate that BMP(s) are sized to meet current and allowable insignificant growth needs of the operation (e.g. concrete pads for barnyards, feed storage, etc.) to achieve PS&Ps and water quality goals.

Manure/barnyard/milkhouse has to be collected. Water quality standards addressed in NR 151 include discharge of nutrients into road ditches, and areas where winter spreading should not be used. Storage will no longer create the need to winter spread, therefore, protecting surface water and groundwater. Cost-effectiveness of the project was determined by following the NRCS/USDA 313 technical standards for manure storage and barnyard, using the appropriate separation distances and sizing (attached is 313 spreadsheet).

b. DNR requires that new or substantially altered manure storage facilities be designed to meet the applicable NR 151 PS&Ps. Typically, a manure storage facility that is designed and maintained to provide 180 days of storage is sufficient to meet NR 151 PS&Ps. The state share should be based only on the cost to construct a facility to meet NR 151 PS&Ps. Submit the WASTE STORAGE FACILITY DESIGN - 313 STANDARD worksheet or equivalent information to support the facility size and cost information submitted in this application.

The storage is sized for 7 months (210 days) because of the hard spring/winters that don't allow for farmers to spread in Kewaunee County. Also due to an increase in well contamination events, lack of winter spreadable acres, location of karst topography, proximity to intermittent streams, surface waterways and a high water table, 210 day storage allows for adequate waste management. 7 months allows these nutrients to be used in correlation with the nutrient management plan to properly land apply.

Form 8700-300 (R 1/15)

Page 10 of 13

TRM Grant Project Name:
Delmar Pekarek Manure Storage

2. If other alternative management measures were evaluated, list them here and describe why the alternative(s) is not being recommended.

The LWCD had to use what is allowed by the NRCS/USDA 313 standard, according to the soil types that are on site with a concrete lined design. Pekarek could go with an in place Pipping or Slurrystore, but they would be a higher cost than a concrete lined structure. An earthen or clay lined cannot be constructed due to the soil types and the USDA/NRCS 313 Standard guidelines.

#### I. Project Evaluation Strategy

1. Project Modeling and Measures of Change

Describe the strategy that will be implemented to evaluate the pre- and post-project pollution potential and pollutant loading data that is required for the Final Project Report. Describe the pre- and post-project evaluation modeling methods and measures that the applicant will use to measure success in achieving the NR 151 PS&Ps or TMDL project goals. See the instructions for lists of BMPs, PS&Ps, modeling and measurement methods and units of measure.

Prior to the installation of a concrete lined manure storage, manure was being hauled daily and milk-house waste was tiled out into an adjacent crop field. After the USDA/NRCS approved manure storage (7 months) construction, daily hauling will no longer be needed. Milk-house waste will be collected and pumped into the manure storage, allowing it to be stored and applied based on the Nutrient Management Plan.

lf	in ad	dition	ty Monitoring (not eligible for cost sharing at this time) to the above, the project evaluation strategy includes evaluating BMP effectiveness and/or pre- and post-project ce monitoring, and the information will be provided to DNR, check all that apply below.
	] a. /	A one-	page summary of the project-specific BMP and/or water resource monitoring strategy is attached.
	] b. ī	The pr	oject will evaluate BMP pollution reduction effectiveness (e.g., inlet/outlet monitoring).
	] c. 7	The pr	oject will evaluate the in-stream physical habitat, fisheries, biological, or chemical conditions.
	₫ d. ī	The ap	oplicant is willing to participate with the Department to do monitoring in the project area should funding become available
J. E	viden	ce of	Local Support that currently exists for the proposed project - check the applicable situation below.
1.	of In	itent to iibitior	ry Situations - The total project cost is attributed to the resolution of a Notice of Discharge (NOD) or a Notice of Issue an NOD (NOI) under NR 243 or non-compliance with agricultural performance standards and as under subch. If of NR 151 or a local regulation and at least one of the following is attached to this in form: (check all that apply).
		a.	Signed and dated copy of the NOI or NOD issued under NR 243;
		b.	Signed and dated copy of letter signed by the authorized DNR representative stating that DNR will issue a notice under NR 151 or NR 243;
		C.	Signed and dated copy of letter from the authorized county representative that the local regulation will be enforced at the project site.
	If yo	u che	cked J.1., then go on to Question K. If this project is not regulatory, continue to number 2. of this question.
2.			ulatory Situations - Check the applicable situation below. Inmental unit has:
٠		a.	Developed a detailed pollution control plan with the landowner(s)/land operator(s) that identifies specific BMPs and the affected landowner(s)/land operator(s) indicated that they will sign a cost-share agreement to install the practices requested in this grant application; or
	0	b.	Conducted general assessments of the pollution sources within the project area and affected landowner(s)/land operator(s) indicated a general interest to participate in the project; or
	0	C.	Contacted the landowner(s)/land operator(s) about the proposed BMP installations; however, landowner(s)/land operator(s) participation is undetermined.
	$\boxtimes$	d.	If a. or b. is checked, letters of support for the project from affected landowner)/land operator are attached.

If a., b. or c. is checked above, provide details here.

We are working closely with Pekarek during the design process and they understand the environmental concerns of the current farm site and lack of winter spreadable acres. They want to construct a manure storage and if funded will

Form 8700-300 (R 1/15)

Page 11 of 13

	sign a cost-share agreement.
3.	Involvement of Partners - check box if applicable.  Partners, in addition to the unit of government (applicant) and landowner, have committed resources  (materials, equipment, staff or financial resources) towards the BMP installation, maintenance or evaluation of the project.  If checked, list the project partner(s).
	Letters from the project partner(s) indicating the resources they committed to support the project are attached. (Letters of resource support must be attached for a score here.)
K. C	onsistency with Other Resource Management Plans
	Check this box if the proposed project implements a water quality recommendation from a locally approved resource management plan. Examples include Smart Growth plans, Legacy Community plans, Water Star plans, local Storm Water Management plans, wellhead protection, lake management, regional water quality plans, Remedial Action plans and other watershed-based nonpoint source control plans.
	(This question does not include a TMDL report or implementation plan, or a County Land and Water Resource Management Plan.)
	Cite the name and date(s) of publication of the document. Attach pertinent page(s) or provide URL and page numbers. Summarize the water quality recommendation(s) and describe how it relates to the goals of this proposed project. (Required to earn credit for K.)
	Part III. Eligibility for Local Enforcement Multiplier
the o	pletion of Part III is optional. However, an applicant can increase the final project score by qualifying for a project multiplier. Check <b>ne</b> enforcement authority situation which <b>best</b> applies to the governmental unit applying for a TRM grant combined with the osed project.
0	The applicant certifies that it has local authority to enforce all state agricultural performance standards and prohibitions at all sites within the local jurisdiction where such state agricultural performance standards and prohibitions apply. <i>Multiply the initial project score by a factor of 1.15</i> .
0	The applicant certifies that it has local regulations that give local authority to enforce most, but not all, of the state agricultural performance standards and prohibitions at all sites within the local jurisdiction where such state agricultural performance standards apply; <b>and</b> this project addresses an enforceable performance standard or prohibition. <i>Multiply the initial project score by a factor of 1.10.</i>
•	The applicant certifies that it has local regulations that give local authority to partially enforce some of the state agricultural performance standards and prohibitions at some, but not all, of the sites within the local jurisdiction; <b>and</b> , this project addresses an enforceable performance standard or prohibition on a site under local jurisdiction. <i>Multiply the initial project score by a factor of 1.05</i> .
0	Applicant has no local authority to enforce state agricultural performance standards and prohibitions within the local jurisdiction for this proposed project. <i>No multiplier is earned.</i>
Co	opies of ordinances for which credit is taken in this section are: (choose at least one)
	Found at this website (provide most direct web page URL).
	Attached to this application.
$\boxtimes$	Already attached to another application for funding.

Carefully review the answers to all of the questions above. Is there additional information that will add to the understanding of this project? If so, describe here.

#### **Applicant Certification**

A Responsible Government Official (authorized signatory) must sign and date the application form prior to submittal to the DNR. The governmental official with signatory authority must be the person authorized by the Governmental Responsibility Resolution. I certify that, to the best of my knowledge, the information contained in this application and attachments is correct and true.

Signature of Authorized Government Official.

Date Signed

Name (Please Print)

Title

Davina Bonness

County Conservationist

The required, completed Governmental Responsibility Resolution (signed in blue ink) (see Attachment I) is attached.

#### Submittal Directions

To be considered for funding, provide the following for each application submitted:

- One copy of the completed application form [DNR Form 8700-300 (R 1/15)] with original signature in blue ink, and all attachments.
- Three additional copies of the completed, signed application form and all attachments.
- One electronic copy of the completed application form in PDFormat only plus all attachments and maps on CD.

or

All application materials must be postmarked by midnight April 15 of the same calendar year.

TRM Grant Project Name: Delmar Pekarek Manure Storage

Please use this page to write any constructive comment(s) you might have to improve this application.

Thank you.

Dear, Department of Natural Resources TRM Grant Board:

I, Delmar Pekarek, am currently working with the Kewaunee County Land & Water Conservation Department on submitting a 2016-2017 TRM grant for the construction of a manure storage, barnyard and roof gutters.

I am writing this letter to say that I am in support of this TRM grant application, that I am willing to implement any construction practices that would be included in this grant (if funded), and I am willing to sign a cost-share agreement and pay 30% of the total costs and any overruns of this manure storage facility/barnyard project.

I look forward to working with the Kewaunee County Land & Water Conservation Department and hearing if I am funded for this grant application so that I can properly store and distribute my manure accordingly.

Sincerely,

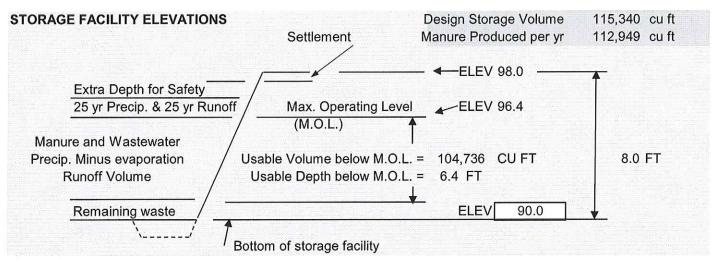

Mun fehret Delmar Pekarek April 7, 2015
