PO Box 7921 or Madison WI 53707-7921

Targeted Runoff Management (TRM) Grant Program Small-Scale Agricultural Application

Form 8700-300 (R 1/15)

Page 1 of 13

Notice: This application form template was created by the Wisconsin Department of Natural Resources. Application is hereby made to the Wisconsin Department of Natural Resources, Bureau of Watershed Management, for grant assistance consistent with s. 281.65, Wis. Stats., and Chapters NR 153 and NR 154, Wis. Adm. Code. Collection of this information is authorized under the authority of s. 281.65, Wis. Stats. Personal information collected will be used for administrative purposes and may be provided to requesters to the extent required by Wisconsin's Open Records Law [ss. 19.31 - 19.39, Wis. Stats.]. Unless otherwise noted, all citations refer to Wisconsin Administrative Code.

Please read the instructions prior to completion of this form. Complete all sections as applicable.

Refer to the instructions for attachments.

O 1. TMDL Project: The project mus					
 The project is in a geographical 	al area c	overed by an FF	A-approved TMDI		

The project addresses the most critical nonpoint pollution sources of the agricultural nonpoint pollutants identified in the TMDL document.

Provide the title of the TMDL report that this project implements. (TMDL link: http://dnr.wi.gov/topic/tmdls/tmdlreports.html).

Provide a link to the report, if available.

Provide the document page number(s) that identify the pollutants and sources being addressed by this project.

2. Non-TMDL Project: The project must be designed to achieve attainment of the NR 151 agricultural performance standards and prohibitions.

Yes

- The applicant certifies that funding from this grant will only be used for BMPs to bring existing cropland, existing livestock facilities and non-significant expansions of livestock operations into compliance with NR 151 performance standards or prohibitions. (See definitions for existing (existing prior to effective dates of standards and prohibitions) and significant expansion in the instructions at Part I. F & G and Part II. H, respectively).
- 3. The applicant certifies that funding from this grant will **not** be used for best management practices to bring a livestock facility or cropland back into compliance with a performance standard or prohibition in NR 151 when such compliance had previously been achieved after the **effective date** of the standard or prohibition. (See effective dates at instructions Part I. G.)

A.2. Us	se of Additional Funding
	Check this box if both of the following conditions are me

- The requested state-share amount in row 7 is less than the \$150,000 grant cap.
- The requested state-share amount in row 7 is below the maximum state-share in row 6. (The resulting cost-share rate is less than 70%.)

B. Method Used to	Calculate Cost Estimates:	Select the appropriate option.	Attach design, bid,	estimate documentation,
as applicable.				

- 1. Project costs are based on completed design and competitive bid on the project. Construction components and costs above should be detailed. Provide the supportive documentation attached to this application.
- 2. Project costs are based on completed design with materials and labor costs based on similar, recently bid projects. Construction components in C. above should be detailed. Provide the supportive documentation in this application.
- Project design is not complete; however, the proposed project and costs are based on similar and recent projects and costs. Provide as much construction detail in C. above as possible. Provide the supportive documentation in this application
- 4. Project design is not complete and the cost estimate is based on an average or a range of projects and costs. Provide as much construction detail in C. above as possible. Provide the supportive documentation in this application.
- 5. Project and costs are less specific than choices above. Provide explanation of cost estimates below or attached to this application.

C. Timeline and Source of Staff

For each applicable milestone listed below, fill in the appropriate data. **Target Completion Date** Source of Staff Milestone (month/year) Completion of design 05/2015 Landowner/LWCD Staff Obtaining required permits Landowner/LWCD Staff 01/2016 Landowner contacts LWCD 02/2015 CSA signing 01/2016 Landowner/LWCD Staff Bidding 02/2016 Landowner DNR approvals 10/2015 Landowner/LWCD Staff Contract signing 01/2016 Landowner/LWCD Staff BMP construction 06/2016 Landowner/LWCD Staff Site inspection and certification 08/2016 LWCD Project evaluation 09/2016 LWCD Other (specify)

0		icts observed or measured in receiving waters but the existence of the pollution is may be chosen if 2. or 7. is checked in D. Water Quality Needs.)
3. P	roject - Describe the water quality problem, the	solution being proposed and the expected environmental improvements.

Describe the pollution problem(s) at the site and its effect on water quality (on site and off site).

What are the critical pollutants and the pollutant sources on the project site? What are all of the Performance Standards & Prohibitions (PS&Ps) and/or TMDL goals that need to be addressed on the site? How does the site impact water quality? Describe how pollutants are conveyed to waters of the state, the distance(s) between source(s) and discharge points or areas to surface or ground water, frequency, magnitude and/or duration of discharge(s), etc. What is the current, estimated pollutant load? (Recommendation: attach photos of pollution source areas, pollution conveyance to waters of the state and the affected receiving water and mention photos here.)

Under this Red River and Sturgeon Bay Watershed project, the BMP NR 154.04(3) Manure Storage System and Barnyard Runoff Control are being planned for 200 beef cows, which will give DeBaker 7 months of storage. Although the Red River and Sturgeon Bay Watershed is located primarily in Door County, it also covers the Northwestern corner of Kewaunee County and Northeastern corner of Brown County. The Red River and Sturgeon Bay watershed is dominated by agriculture (57%) and ranked medium for nonpoint source issues affecting surface and high for those affecting groundwater. Nonpoint source pollutants to the watershed include sediment, nitrogen, phosphorus and manure. The pollutants are all found in manure and milk-house runoff, resulting in the potential of water quality degradation. In 2000, the Lakeshore Basin Partnership Team, which includes the Door-Kewaunee watershed, identified a list of priorities of the most pressing issues impacting the natural resources in the watershed including contamination of drinking water and loss of biodiversity. DeBaker's farm currently has 200 beef cows, which generate 462.7 cu feet of manure and wastewater per day. The manure is hauled daily and milkhouse waste is tiled into the field. The long winter months when the ground is frozen as well as times of saturation in spring and fall heighten the risk of water quality degradation when inadequate manure storage facilities are present. The barnyard areas that the animals are confined on are 13,540 square feet and can be seen on the attached project site map. The barnyard area sits at a higher elevation than the adjacent field; runoff flow down to this field results in very wet, mucky conditions. The estimated monthly runoff from these areas is 16,699 cubic feet. The proposed concrete barnyard and manure storage will eliminate the opportunity for runoff and soil degradation in this area. Roof gutters installed above the barnyard area will redirect effluent from storm events which will further reduce the opportunity for runoff. This site is bordered by an unnamed tributary to Green Bay approximately 500 meters to the East, and an unnamed tributary to Kewaunee River flows through the Southeastern property/spreading area, both of which are ASNRI (see attached map). The project site is located on 288 acres, of which 255 are cropland (See attached Section

Page 9 of 13

TRM Grant Project Name:

Nick DeBaker Manure Storage

Map). These fields are mostly silt loam/silty clay loam soils with fall spreading restrictions due to excessively drained soils (P) or 12" or less to the apparent water table. Winter spreading restrictions exist if the field slopes are >9% and not contoured. The topographic map included shows the path of potential runoff to the unnamed tributary to Green Bay and unnamed tributary to Kewaunee River. These waterbodies are vulnerable to pollution in the heavily agriculture landscape. In addition, Karst topography is prevalent in the landscape of Kewaunee County, limiting manure spreading in sensitive areas. Appropriately sized manure and barnyard storage facilities will eliminate the need for daily spreading/tiling, further protecting these sensitive areas in the landscape.

2. Describe the project.

What is this project? What pollution problem(s) described above will be addressed with this project and how? How much of the pollution problem(s) associated with this site/operation will this project address? Which of the NR 151 PS&Ps or TMDL goals identified above will this project address? Which, if any, will remain to be addressed (and why)? Will the remaining PS&Ps be addressed with other funding sources in the same timeframe as this project or will they need to be addressed in subsequent years/grants?

The LWCD is proposing to construct a concrete lined manure storage to collect all manure and milk house waste from the farm. This will allow proper manure storage until spreading occurs and prevents potential runoff. Pollution will be addressed by storing all waste/manure in an USDA/NRCS constructed manure storage. BMP's installed will address manure storage (96,600 gallons) and milkhouse waste (20 gal/day). The storage size will be 60x65x15 feet deep for 210 days (97,161 cu ft). The amount of manure and wastewater generated is 726,768 gallons. There are currently 200 animal units; no expansions are planned for now or in the future. A Nutrient Management Plan will be developed for DeBaker after the manure storage, milk-house, underground outlets and roof runoff BMP installation in compliance with the Kewaunee County Animal Waste Storage Ordinance. This grant will address all pollution problems at the site.

3. Describe the expected environmental improvements.

How effective will this project be in solving the pollution problem(s) and water quality impacts described above? What is the expected percent reduction in pollutant loading or pollution potential after this project is completed? What is the compliance level with NR 151 PS&Ps that will be achieved with completion of this project and what will remain to be addressed? What is the potential for water quality improvement of the receiving water?

Through the construction of an USDA/NRCS approved 313 manure storage, all nutrients/manure will be contained and they will no longer be discharging to sensitive areas. A concrete lined manure storage will allow for proper nutrient application of manure/waste according to the Nutrient Management Plan.

Phosphorus and Nitrogen will be decreased and managed through a Nutrient Management Plan. Decrease in nutrient runoff into surface waters, ditches and groundwater will result after these practices are installed. The manure storage will also allow storage of nutrients during winter months and saturated fields in the spring/fall resulting in a lower chance of groundwater contamination.

H. Cost-Effectiveness

 a. Explain how the proposed best management practices are a reasonable means to achieve NR 151 Performance Standards and Prohibitions (PS&Ps) or TMDL water quality goals. Include factors such as cost-effectiveness, site feasibility, available technical standards, and practicality. If applicable, include information to demonstrate that BMP(s) are sized to meet current and allowable insignificant growth needs of the operation (e.g. concrete pads for barnyards, feed storage, etc.) to achieve PS&Ps and water quality goals.

Manure/barnyard/milkhouse has to be collected. Water quality standards addressed in NR 151 include discharge of nutrients into road ditches, and areas where winter spreading should not be used. Storage will no longer create the need to winter spread, therefore, protecting surface water and groundwater. Cost-effectiveness of the project was determined by following the NRCS/USDA 313 technical standards for manure storage and barnyard, using the appropriate separation distances and sizing (attached is 313 spreadsheet).

- b. DNR requires that new or substantially altered manure storage facilities be designed to meet the applicable NR 151 PS&Ps. Typically, a manure storage facility that is designed and maintained to provide 180 days of storage is sufficient to meet NR 151 PS&Ps. The state share should be based only on the cost to construct a facility to meet NR 151 PS&Ps. Submit the WASTE STORAGE FACILITY DESIGN 313 STANDARD worksheet or equivalent information to support the facility size and cost information submitted in this application.
 - The storage is sized for 7 months (210 days) because of the hard spring/winters that don't allow for farmers to spread

practices requested in this grant application; or

TRM Grant Project Name:

Nick DeBaker Manure Storage

in Kewaunee County. Also due to an increase in well contamination events, lack of winter spreadable acres, location of karst topography, proximity to intermittent streams, surface waterways and a high water table, 210 day storage allows for adequate waste management. 7 months allows these nutrients to be used in correlation with the nutrient management plan to properly land apply.

If other alternative management measures were evaluated, list them here and describe why the alternative(s) is not being recommended.

The LWCD had to use what is allowed by the NRCS/USDA 313 standard, according to the soil types that are on site with a concrete lined design. DeBaker could go with an in place Pipping or Slurrystore, but they would be a higher cost than a concrete lined structure. An earthen or clay lined cannot be constructed due to the soil types and the USDA/NRCS 313 Standard guidelines.

I. Project Evaluation Strategy

1. Project Modeling and Measures of Change

Describe the strategy that will be implemented to evaluate the pre- and post-project pollution potential and pollutant loading data that is required for the Final Project Report. Describe the pre- and post-project evaluation modeling methods and measures that the applicant will use to measure success in achieving the NR 151 PS&Ps or TMDL project goals. See the instructions for lists of BMPs, PS&Ps, modeling and measurement methods and units of measure.

Prior to the installation of a concrete lined manure storage, manure was being hauled daily and milk-house waste was tiled out into an adjacent crop field. After the USDA/NRCS approved manure storage (7 months) construction, daily hauling will no longer be needed. Milk-house waste will be collected and pumped into the manure storage, allowing it to be stored and applied based on the Nutrient Management Plan that will be completed if this project is funded as per the Kewaunee County Animal Waste Storage Ordinance.

lf,	in additio	lity Monitoring (not eligible for cost sharing at this time) n to the above, the project evaluation strategy includes evaluating BMP effectiveness and/or pre- and post-project continuous monitoring, and the information will be provided to DNR, check all that apply below.
	W 5-5-0	e-page summary of the project-specific BMP and/or water resource monitoring strategy is attached.
L	_ b. The p	project will evaluate BMP pollution reduction effectiveness (e.g., inlet/outlet monitoring).
	c. The p	project will evaluate the in-stream physical habitat, fisheries, biological, or chemical conditions.
D	d. The a	applicant is willing to participate with the Department to do monitoring in the project area should funding become available
J. E	vidence o	of Local Support that currently exists for the proposed project - check the applicable situation below.
1.	of Intent prohibition	ory Situations - The total project cost is attributed to the resolution of a Notice of Discharge (NOD) or a Notice to Issue an NOD (NOI) under NR 243 or non-compliance with agricultural performance standards and one under subch. Il of NR 151 or a local regulation and <i>at least one</i> of the following is attached to this on form: (check all that apply).
	a.	Signed and dated copy of the NOI or NOD issued under NR 243;
	□ b.	Signed and dated copy of letter signed by the authorized DNR representative stating that DNR will issue a notice under NR 151 or NR 243;
	□ c.	Signed and dated copy of letter from the authorized county representative that the local regulation will be enforced at the project site.
	If you ch	ecked J.1., then go on to Question K. If this project is not regulatory, continue to number 2. of this question.
2.		gulatory Situations - Check the applicable situation below. ernmental unit has:

Conducted general assessments of the pollution sources within the project area and affected landowner(s)/land operator(s) indicated a general interest to participate in the project; or

Developed a detailed pollution control plan with the landowner(s)/land operator(s) that identifies specific BMPs and the affected landowner(s)/land operator(s) indicated that they will sign a cost-share agreement to install the

Form 8700-300 (R 1/15)

	c. Contacted the landowner(s)/land operator(s) about the proposed BMP installations; however, landowner(s)/land operator(s) participation is undetermined.
	d. If a. or b. is checked, letters of support for the project from affected landowner)/land operator are attached.
3.	f a., b. or c. is checked above, provide details here. We are working closely with DeBaker during the design process and they understand the environmental concerns of the current farm site and lack of winter spreadable acres. They want to construct a manure storage and if funded will sign a cost-share agreement. Involvement of Partners - check box if applicable.
Ö	Partners, in addition to the unit of government (applicant) and landowner, have committed resources (materials, equipment, staff or financial resources) towards the BMP installation, maintenance or evaluation of the project. f checked, list the project partner(s).
	Letters from the project partner(s) indicating the resources they committed to support the project are attached. (Letters of resource support must be attached for a score here.)
K. C	nsistency with Other Resource Management Plans
П	Check this box if the proposed project implements a water quality recommendation from a locally approved resource management plan. Examples include Smart Growth plans, Legacy Community plans, Water Star plans, local Storm Water Management plans, wellhead protection, lake management, regional water quality plans, Remedial Action plans and other watershed-based nonpoint source control plans.
	(This question does not include a TMDL report or implementation plan, or a County Land and Water Resource Management Plan.)
	Cite the name and date(s) of publication of the document. Attach pertinent page(s) or provide URL and page numbers. Summarize the water quality recommendation(s) and describe how it relates to the goals of this proposed project. (Required to earn credit for K.)
	Part III. Eligibility for Local Enforcement Multiplier
the c	letion of Part III is optional. However, an applicant can increase the final project score by qualifying for a project multiplier. Check e enforcement authority situation which best applies to the governmental unit applying for a TRM grant combined with the sed project.
0	The applicant certifies that it has local authority to enforce all state agricultural performance standards and prohibitions at all sites within the local jurisdiction where such state agricultural performance standards and prohibitions apply. <i>Multiply the initial project score by a factor of 1.15.</i>
0	The applicant certifies that it has local regulations that give local authority to enforce most, but not all, of the state agricultural performance standards and prohibitions at all sites within the local jurisdiction where such state agricultural performance standards apply; and this project addresses an enforceable performance standard or prohibition. Multiply the initial project score by a factor of 1.10.
•	The applicant certifies that it has local regulations that give local authority to partially enforce some of the state agricultural performance standards and prohibitions at some, but not all, of the sites within the local jurisdiction; and, this project addresses an enforceable performance standard or prohibition on a site under local jurisdiction. Multiply the initial project score by a factor of 1.05.
0	Applicant has no local authority to enforce state agricultural performance standards and prohibitions within the local jurisdiction for this proposed project. No multiplier is earned.
