## Management Plan Update

### *Kick-Off Meeting*

**July 9, 2016 – 9:00 AM**

**Baileys Harbor Town Hall**

**2392 County Road F, Bailys Harbor, WI 54202**

---

The Kangaroo Lake Association (KLA) has received a grant totaling over \$21,000 from the Wisconsin Department of Natural Resources (WDNR) to fund 67% of a project designed to update the management plan that was completed for Kangaroo Lake in 2004. The studies completed as part of the 2004 management plan were focused within the southern basin of the lake (south of County Rd. E causeway). Along with repeating and conducting new studies within the southern basin, the current project will also implement studies within the lake's northern basin, an area designated as a *wetland gem* for its ecological value and importance in maintaining Wisconsin's biodiversity.

Brenton Butterfield, an Onterra lakes ecologist, speaks to a lake group in Waushara County about a littoral habitat study conducted on their lake. Public participation will be an integral part of the Kangaroo Lake project.

The design for the planning project update has been finalized and approved by the WDNR and includes two primary objectives: 1) the completion of in-depth studies including multiple plant surveys, water quality sampling, a shoreland health assessment survey, watershed modeling, and a stakeholder survey, and 2) the completion of a realistic management plan for Kangaroo Lake and its watershed. Studies being completed for this project have already been initiated this spring and will continue through the fall of 2016. The tasks associated with the analysis and reporting of the data will be completed during the fall and winter of 2016/17.

The project will also incorporate opportunities for stakeholder education and input, which are both very important components of all lake management planning efforts. The first opportunity for your participation in the process will be at the Project Kick-off Meeting to be held on Saturday, July 9<sup>th</sup> at 9:00 am at the Bailys Harbor Town Hall (2392 County Road F, Bailys Harbor, WI). In addition to this meeting as well as others, an additional opportunity for your input will be through a written stakeholder survey that will be distributed during the project.

Onterra, LLC, a lake management planning firm out of De Pere, has been hired to lead the project. During the meeting, Brenton Butterfield, a lakes ecologist with Onterra, LLC, will describe the project and its importance. The presentation will include a description of the project's components, a quick course on general lake ecology, and a breakdown of how the KLA's Planning Committee will be involved in the plan's completion. So, please plan on attending the meeting and do not hesitate to ask questions or make comments.

  - Five summer interns
- Services
  - Science and planning
- Philosophy
  - Promote realistic planning
  - Assist, not direct

Onterra, LLC  
Lake Management Planning

## **Why create a lake management plan?**

- To create a better understanding of the lake's positive and negative attributes.
- To discover ways to minimize the negative attributes and maximize the positive attributes.
- To foster realistic expectations and dispel myths.
- To create a snapshot of the lake for future reference and planning.

Onterra, LLC

# Kangaroo Lake Management Planning Project

November 2016 Update  
Submitted by: Brenton Butterfield, Onterra, LLC

With a Lake Management Planning Grant totaling \$21,000 from the Wisconsin Department of Natural Resources (WDNR) awarded to the Kangaroo Lake Association (KLA), a project is underway to update Kangaroo Lake's 2004 lake management plan. The 2004 plan guided a number of the KLA's activities, including multiple bulrush restoration projects, volunteer aquatic invasive species (AIS) monitoring, implementation of a voluntary 500-foot from shore slow-no-wake zone, and course woody habitat enhancement.

In 2015, the KLA elected to update the lake's management plan, with particular attention being paid to the lake's northern basin. This area north of the County Road E causeway was not surveyed during the initial management plan development. Comprehensive studies were completed by Onterra ecologists in 2016 in an effort to reassess the health of Kangaroo Lake. In addition, an anonymous stakeholder survey was distributed in November to gauge stakeholder perceptions about the lake and obtain stakeholder input. The updated lake management plan will contain historical and current data from the lake as well as provide guidance for its management by integrating stakeholder perceptions and goals with what is ecologically beneficial for the lake.

The majority of the field studies have been completed on Kangaroo Lake with the exception of winter water quality sampling scheduled for February of 2017. This project update is intended to provide Kangaroo Lake stakeholders with a preliminary look at some of the initial observations and results from the scientific studies completed in 2016, as well as provide a timeline for the remaining actions that will be taken as part of this project. While much of the data are still being analyzed, some study highlights that are available are discussed below.

## Water Quality Studies

Water quality data were collected from seven separate sampling events over the course of the 2016 growing season from April through October by both Onterra ecologists and KLA Citizen Lake Monitoring Network Volunteers. An additional water quality sampling event is scheduled for late-winter 2017 by Onterra ecologists. These data provide ecologists with a picture of what nutrient dynamics are like within the lake over the course of the year as well as what nutrients (phosphorus or nitrogen) regulate algal production. In addition, available historical data are being analyzed to determine if Kangaroo Lake's water quality has changed (for better or worse) over time. Initial results indicate that Kangaroo Lake's water quality falls into the *excellent* category for shallow, lowland drainage lakes in Wisconsin.

All of the water quality analyses are not yet complete, but preliminary results indicate that the average growing season (April-October) Secchi disk transparency, a measure of water clarity, in 2016 was the highest recorded since annual records began in 1993. The average growing season Secchi disk

Figure 1. Kangaroo Lake, Door County, Wisconsin.

transparency in 2016 was 8.3 feet compared to the historical average of 5.8 feet, and there has been an increasing trend in water clarity in Kangaroo Lake since 2012. The reason for the increase in water clarity in Kangaroo Lake is likely due to the observed decline free-floating algal abundance, measured through chlorophyll-a concentrations. Since 2014, growing season chlorophyll-a concentrations have been approximately 29% lower than the historical average.

To determine why changes have occurred in chlorophyll-a concentrations over time within a lake, lake managers typically look at phosphorus concentrations first. In the majority of Wisconsin's lakes, including Kangaroo Lake, phosphorus is the primary nutrient regulating algal production. If changes in phosphorus concentrations occur, usually chlorophyll-a concentrations respond in the same direction. In Kangaroo Lake, measured phosphorus concentrations have not declined since 2012, and in fact, have been slightly higher in 2015 and 2016 when compared to 2012-2013. The growing season phosphorus concentration in 2016 of 14.5 µg/L was nearly identical to the historical average of 14.9 µg/L. This indicates that the decline in chlorophyll-a concentrations and subsequent increase in water clarity in recent years are the result of another process and not the result of changes in phosphorus concentrations.

It is possible that the recent decrease in chlorophyll-a concentrations and increase in water clarity is the result of the relatively new invasion of the non-native zebra mussel to Kangaroo Lake. Discovered in Kangaroo Lake in 2008, populations of the filter-feeding zebra mussels have been shown to increase water clarity in lakes by decreasing the amount of suspended material within the water (i.e. algae and sediment). Zebra mussels are very efficient filter feeders, and water that has been filtered is almost entirely devoid of suspended material. Even unwanted particles, such as sediment, that pass through zebra mussels are deposited to the lake bottom. While quantitative data such as population density have not been collected for Kangaroo Lake's zebra mussel population, this is believed to be the most plausible explanation for declining chlorophyll-a concentrations independent of phosphorus concentrations.

#### *Aquatic Plant Studies*

Four surveys aimed at assessing Kangaroo Lake's aquatic plant community were conducted by Onterra ecologists in 2016. The first survey, the Early-Season Aquatic Invasive Species (ESAIS) Survey, is a meander-based survey completed in June where non-native aquatic plants are located and mapped visually. The primary goal of this meander-based survey is to locate occurrences of non-native plants which have the greatest probability of being located at this time of year. These include curly-leaf pondweed (CLP), which reaches its peak growth in June before naturally dying back by early July, and pale-yellow iris (PYI), which is typically in peak bloom in June. While Eurasian water milfoil (EWM) does not typically reach its peak growth until mid- to late-summer, it is also mapped during this survey as well. Fortunately, no occurrences of CLP or PYI were located in or along the shores of Kangaroo Lake in 2016. The 2016 EWM population in Kangaroo Lake is discussed in detail further in this update.

The whole-lake aquatic plant point-intercept surveys were completed on Kangaroo Lake in August. These grid-based surveys are designed to quantify the abundance of each aquatic plant species within the lake and allows for a quantitative comparison of the quality of Kangaroo Lake's native aquatic plant community to those of other lakes within the region and the state. Community mapping surveys aimed at mapping emergent and floating-leaf aquatic plants in Kangaroo Lake were also completed in August. During these surveys, a total of 26 aquatic plant species were located, only one of which is considered to be a non-native, invasive species: EWM. The southern basin contained 17 native aquatic plant species while the northern basin contained 21.

The plant communities in both the northern and southern basins were overwhelmingly dominated by muskgrasses, a group of native macroalgae which tend to be abundant in lakes like Kangaroo Lake with high concentrations of calcium carbonate. Eurasian water milfoil had a littoral frequency of occurrence of just 2.1% and 0.5% in the southern and northern basins, respectively. In the northern basin, the EWM was mainly confined in the southern area along the causeway. In the southern basin, EWM was more widespread with denser colonies occurring in the south-central portion of the lake. However, the point-intercept data indicate its occurrence in both basins is very low, and the EWM population is likely not having a significant impact ecologically or recreationally within either basin. However, Onterra ecologists will be working with the KLA Planning Committee to develop management strategies for continued monitoring and potential control of EWM in Kangaroo Lake.

#### *Additional Lake and Lake Stakeholder Studies*

In addition to water quality and aquatic plant studies, Onterra has completed surveys to assess the lake's shoreline development, examine its watershed, and evaluate fish habitat potential. Finally, an anonymous survey was sent to Kangaroo Lake stakeholders in November to assess their use of the lake, perceptions of historical and current water quality, concerns for the lake ecosystem and more. These results will be integrated into the management plan.

#### *Remaining Steps*

In summary, all project components are on schedule and proceeding as planned. Onterra is currently examining the study results in preparation for a spring meeting with the Kangaroo Lake Planning Committee. The meeting will be held to discuss the results and begin creation of management goals and actions the KLA will pursue in order to manage their lake in both a recreationally enjoyable and ecologically sound manner. These management goals and an entire project summary will be presented to the general public during a project Wrap-up meeting, likely to be held in the summer of 2016.

Lake Management Planning

## ***Summary of Project Results***

**Water Quality**

- Excellent for a shallow lowland drainage lake

**Watershed & Immediate Shoreline**

- Majority of watershed comprised of agriculture
- High degree of shoreland development in south basin; north basin largely undeveloped

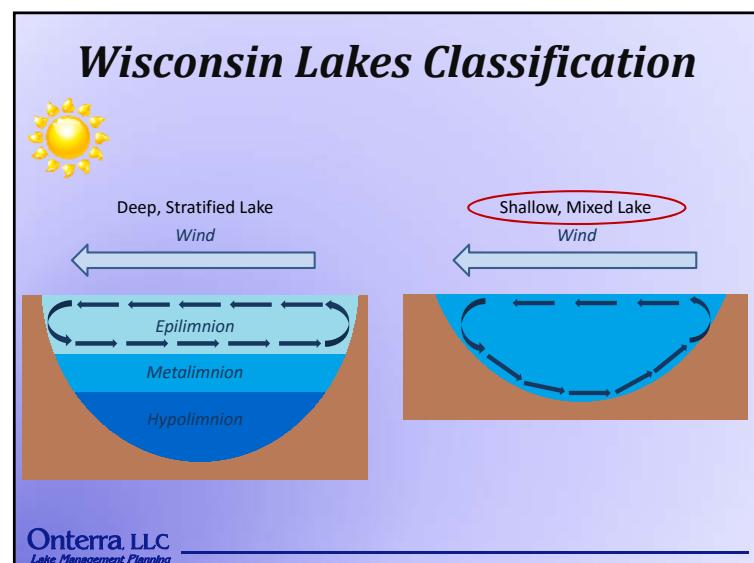

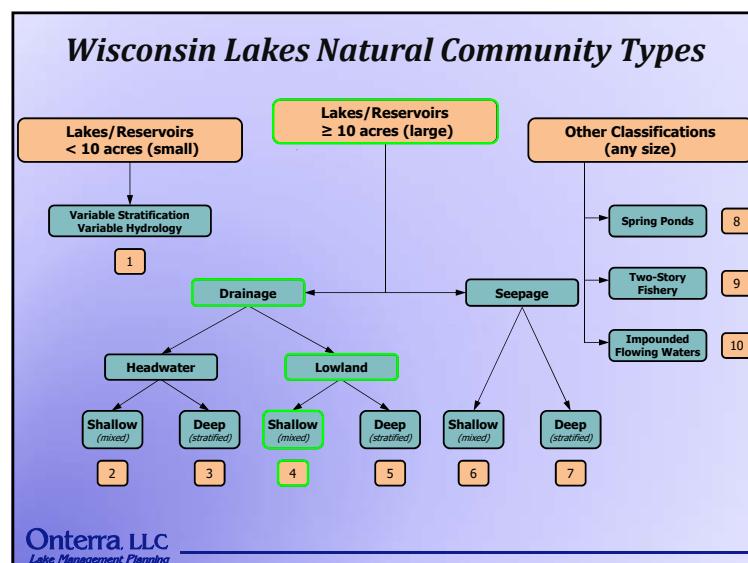

**Aquatic Plant Community**

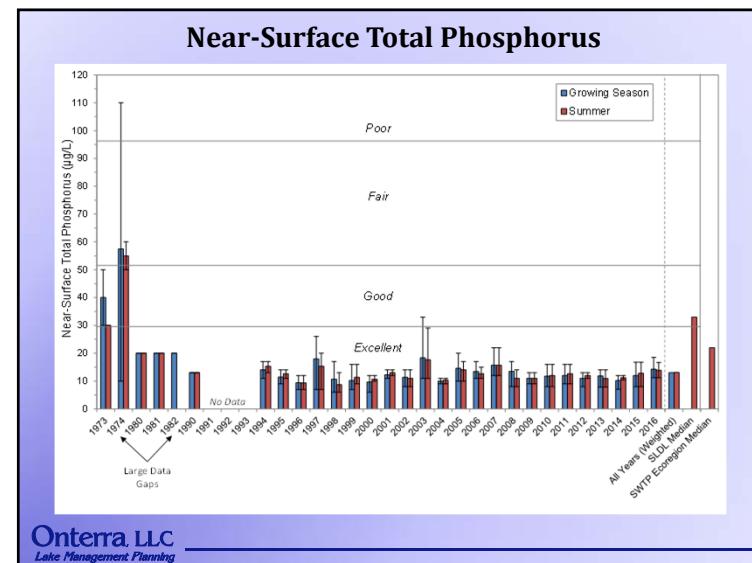

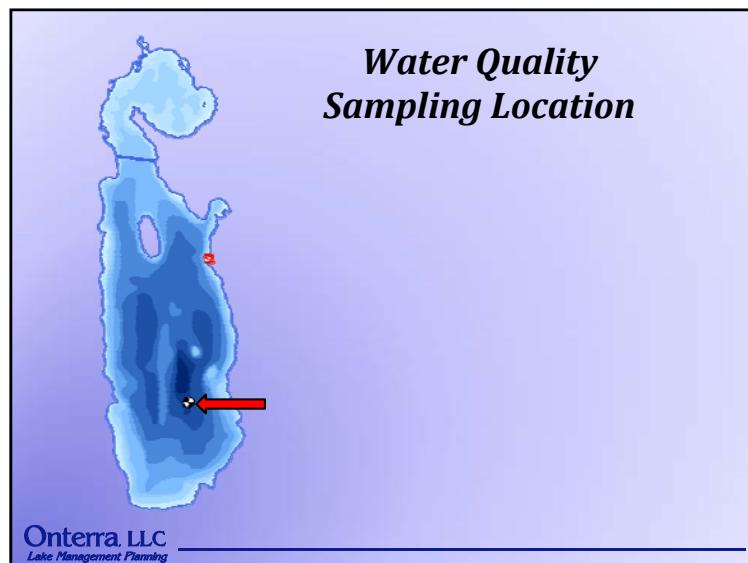

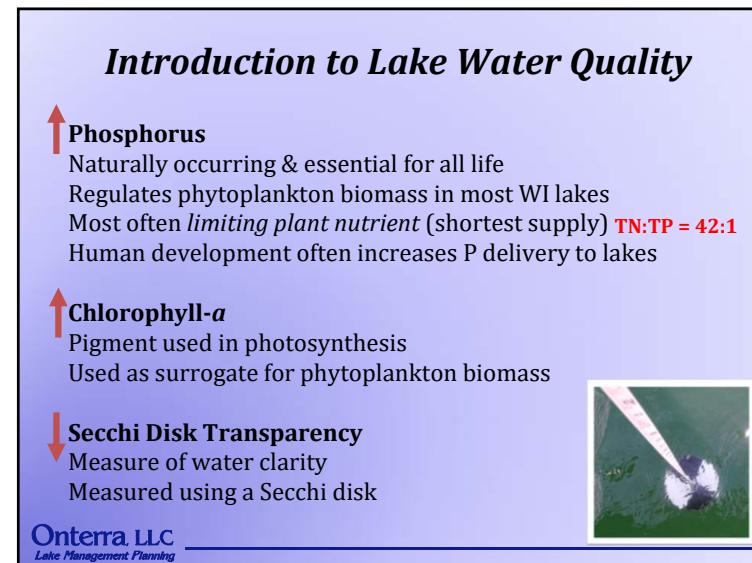

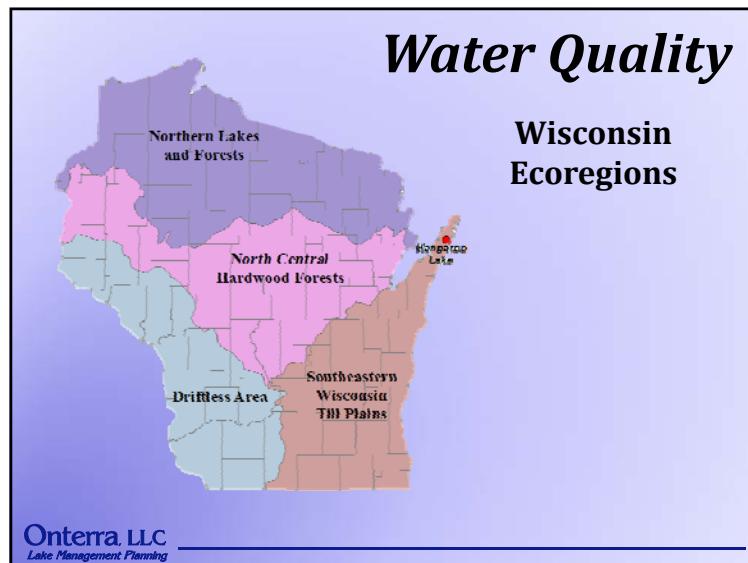

- High species richness for Southeast Wisconsin Till Plains Ecoregion
- Eurasian watermilfoil only non-native plant species located in 2016
- Hardstem bulrush community in south basin ~2.5 acres smaller than in 2003

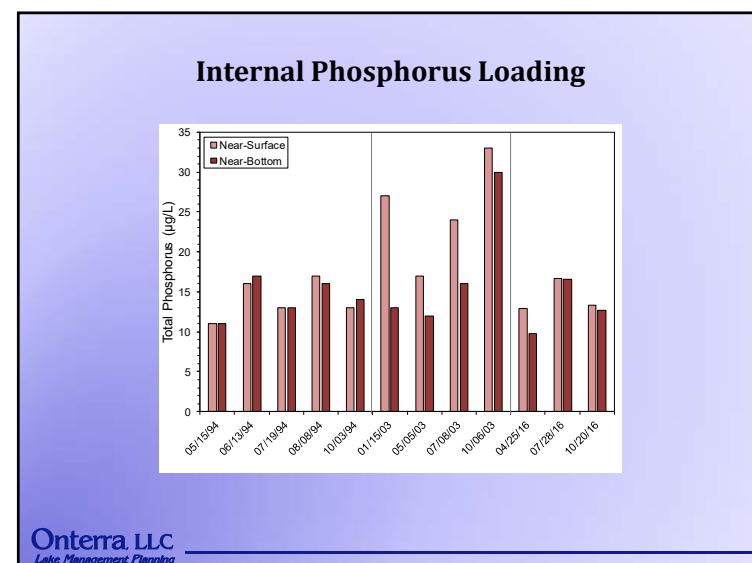

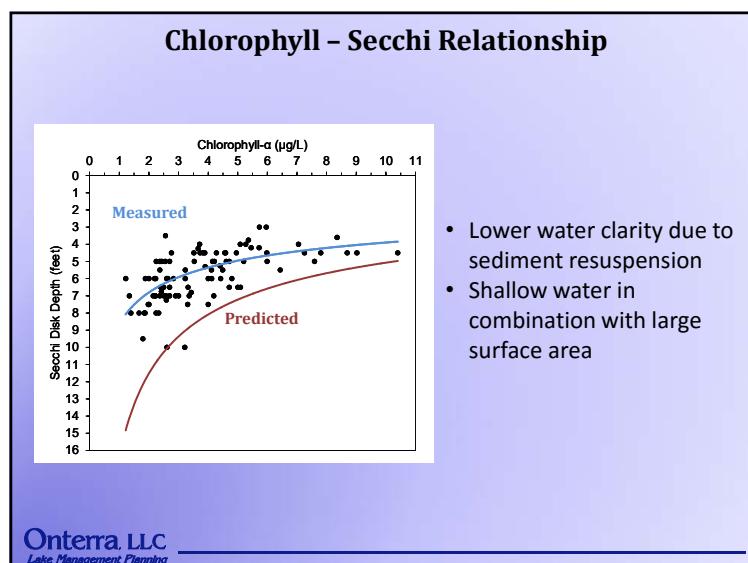

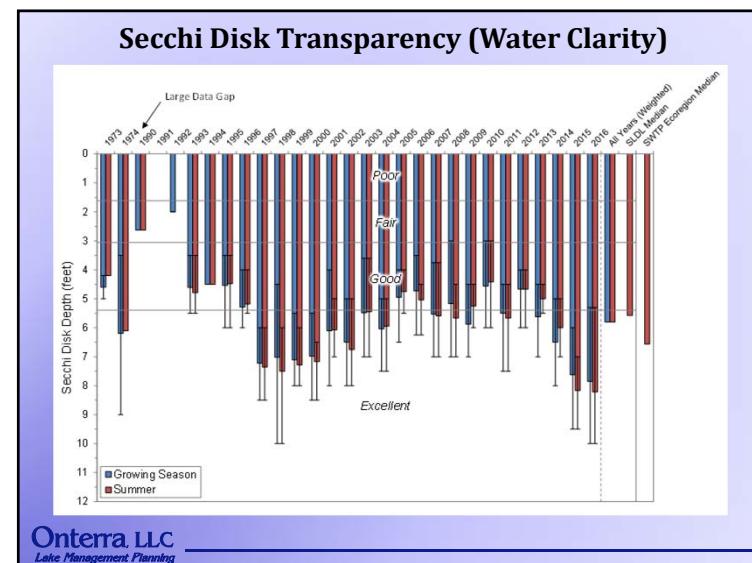

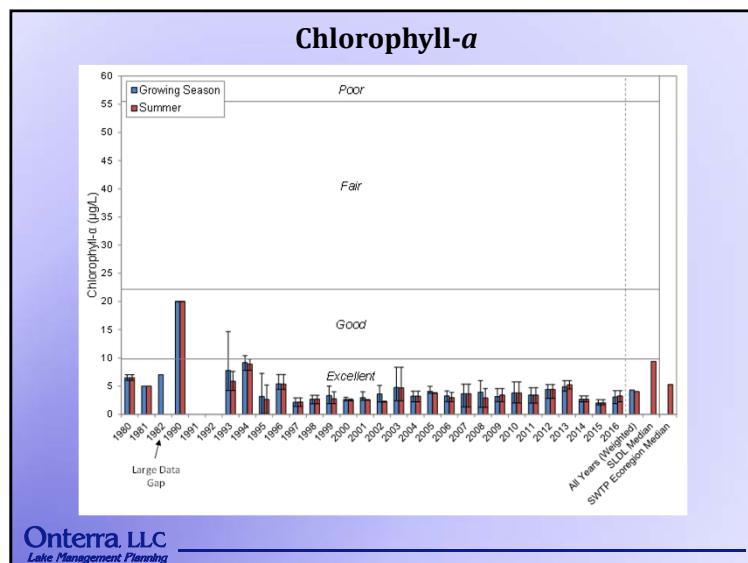

**Fisheries**

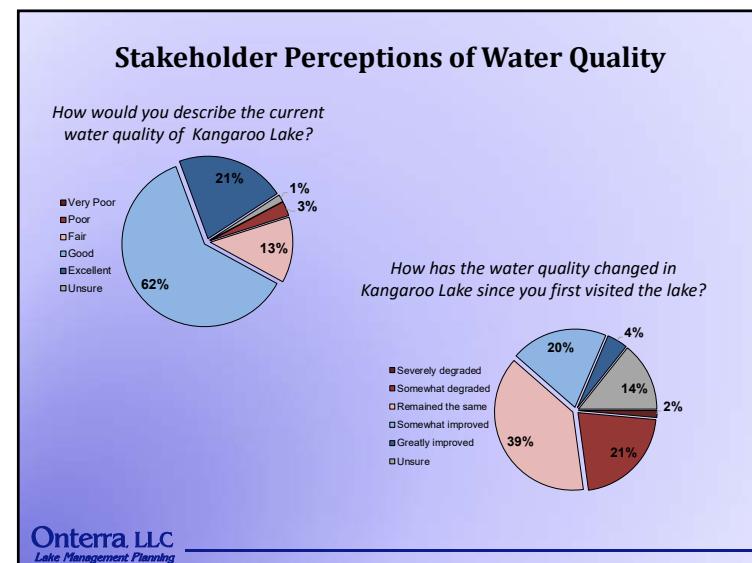

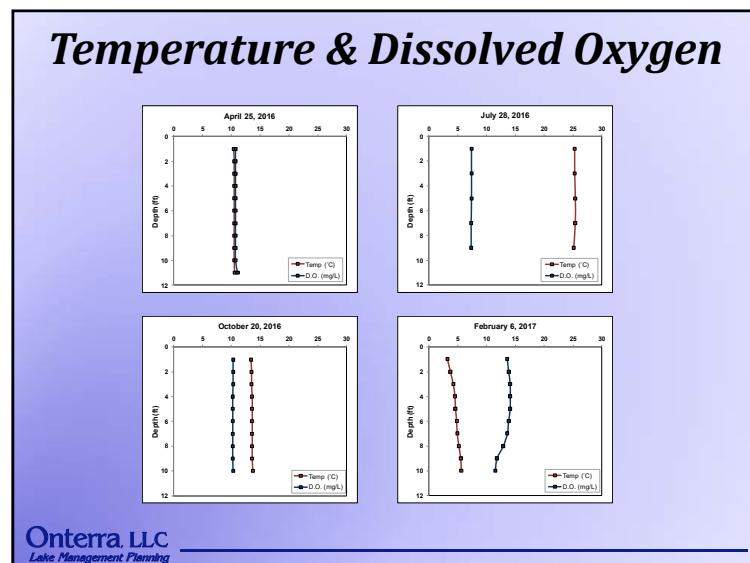

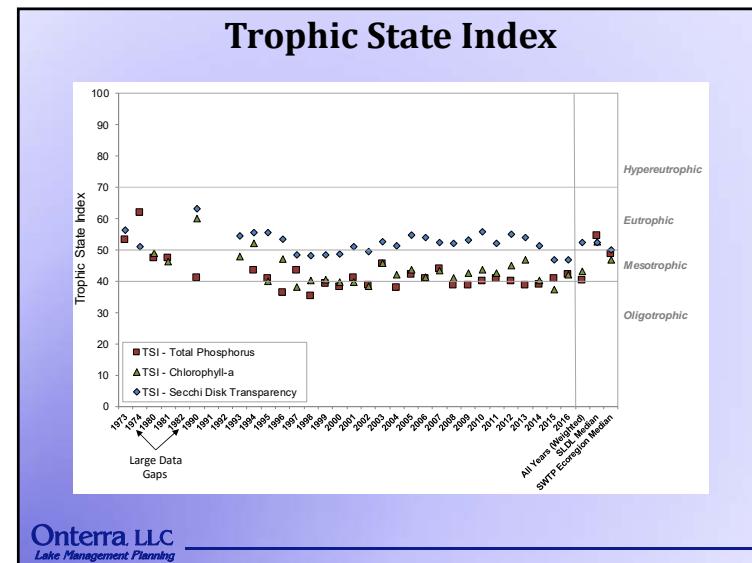

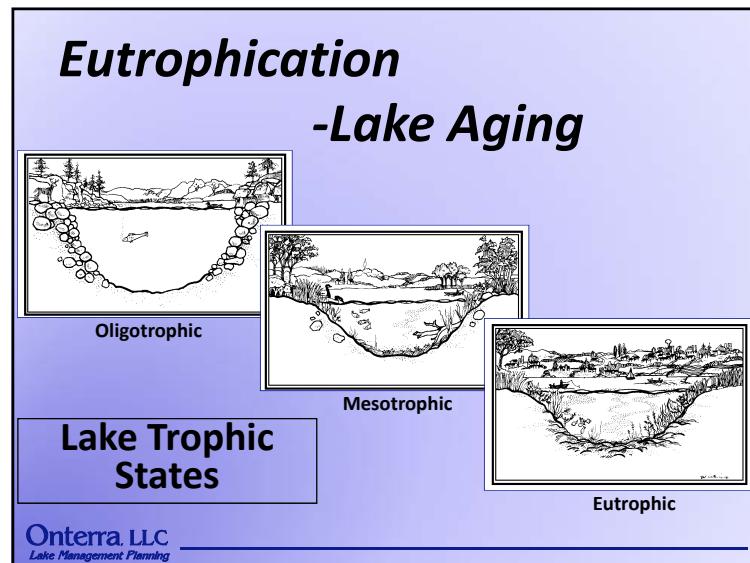

- Some changes have occurred; lake shifting from walleye- to bass-dominated fishery

**Onterra LLC**  
Lake Management Planning

## ***Additional Water Quality Parameters***

### **pH – Measure of water acidity**

- 8.6 in 2016

### **Alkalinity – capacity to resist fluctuations in pH**

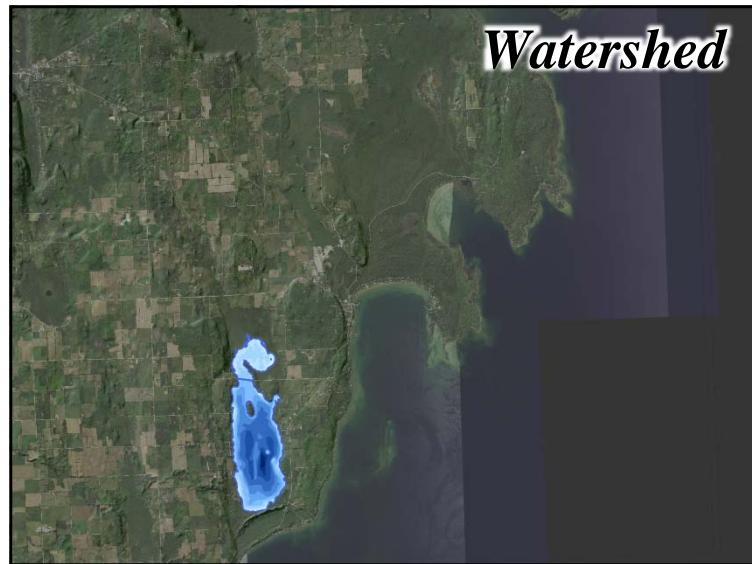

- 179 as mg/CaCO<sub>3</sub> in 2016

### **Calcium**

- 42 mg/L in 2016

**Environment highly suitable for zebra mussels**

**Onterra, LLC**  
Lake Management Planning

## ***Zebra Mussels (*Dreissena polymorpha*)***

- Discovered in Kangaroo Lake in 2008
- Create host of ecological & economic impacts
  - Alterations to food web
  - Changes in water quality
  - Displacement of native mussels

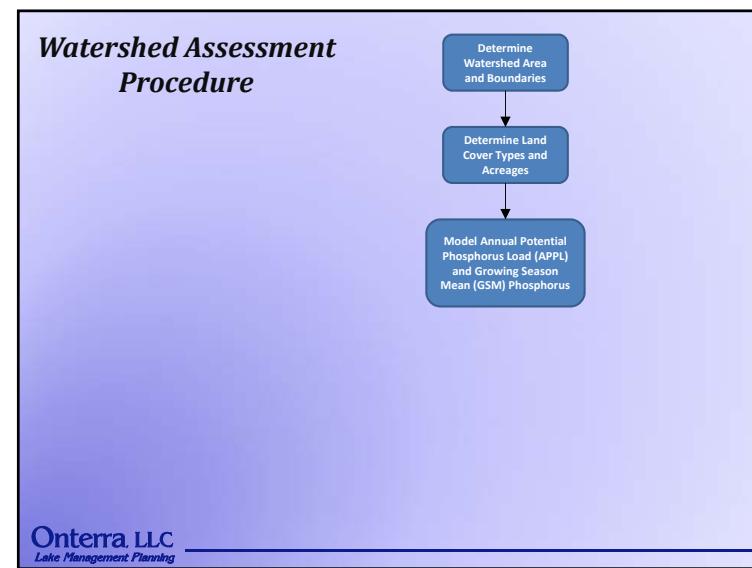

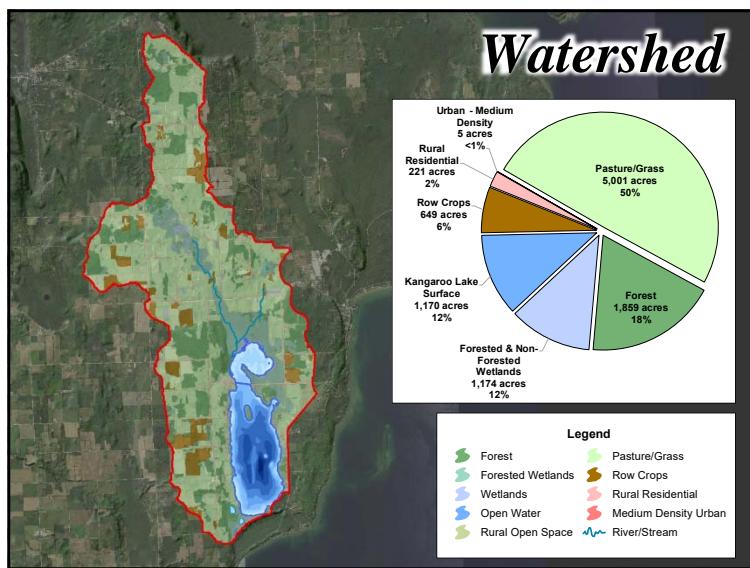

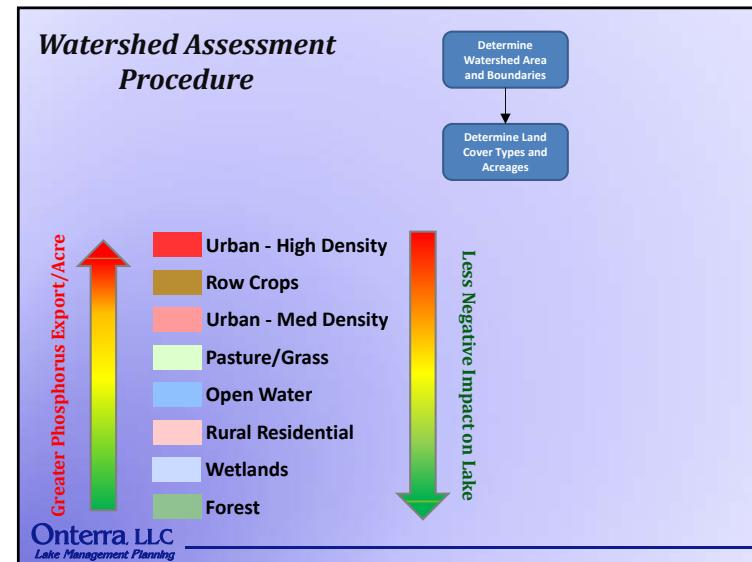

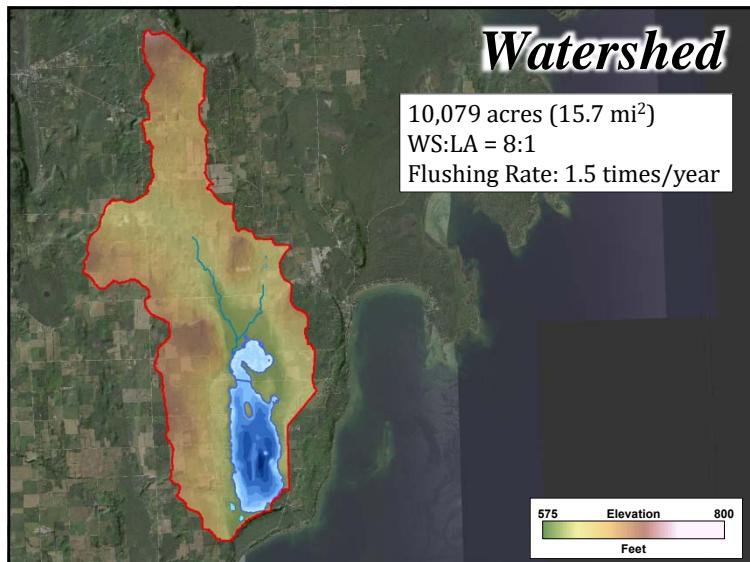

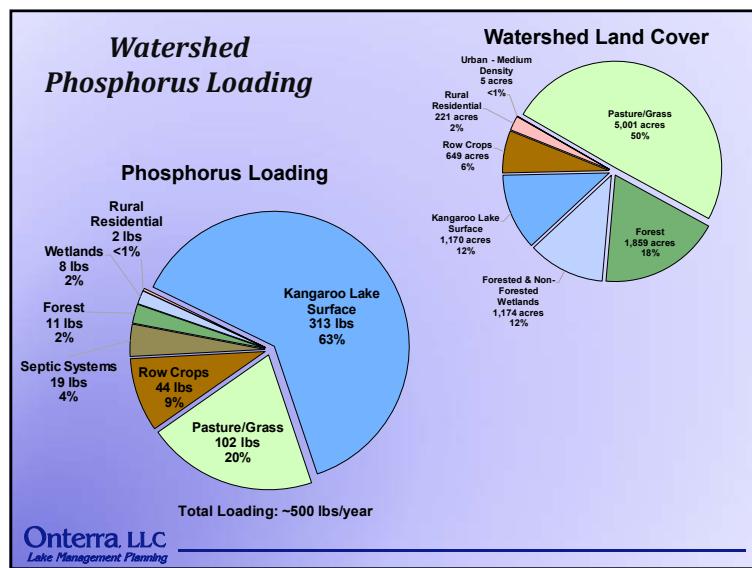

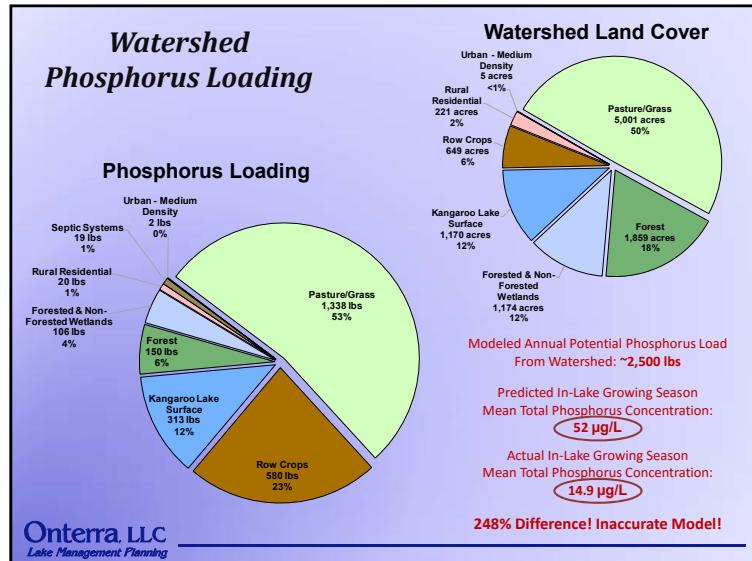

**Onterra, LLC**  
Lake Management Planning

## ***Watershed Assessment Procedure***

Determine  
Watershed Area  
and Boundaries

**Onterra, LLC**  
Lake Management Planning

## Shoreland Assessment

- Shoreland area is important for buffering runoff and provides valuable habitat for aquatic and terrestrial wildlife.
- EPA National Lakes Assessment results indicate shoreland development has greatest negative impact to health of our nation's lakes.
- It does not look at lake shoreline on a property-by-property basis.
- Assessment ranks shoreland area from shoreline back 35 feet

The diagram illustrates the range of shoreland assessment. On the left, under the heading "Urbanized", there is a photograph of a large, modern house with a deck overlooking a shoreline. An arrow labeled "Range" points to the right, where there is a photograph of a natural shoreline with dense green trees and bushes. The background of the slide is light purple.

**Urbanized**

**Natural**

Range

## Shoreline Assessment Category Descriptions

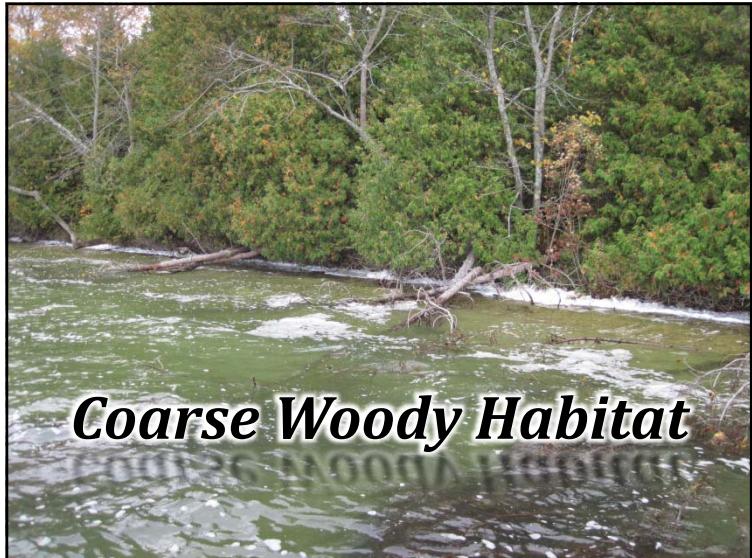

A horizontal color gradient bar with five photographs of lake shorelines corresponding to different categories: Urbanized, Developed-Unnatural, Developed-Semi-Natural, Developed-Natural, and Natural/Undeveloped. The bar transitions from red on the left to green on the right, with the text "More Natural Habitat" in blue at the top and "Greater Need for Restoration" in red at the bottom.

More Natural Habitat

Greater Need for Restoration

Onterra LLC  
Lake Management Planning

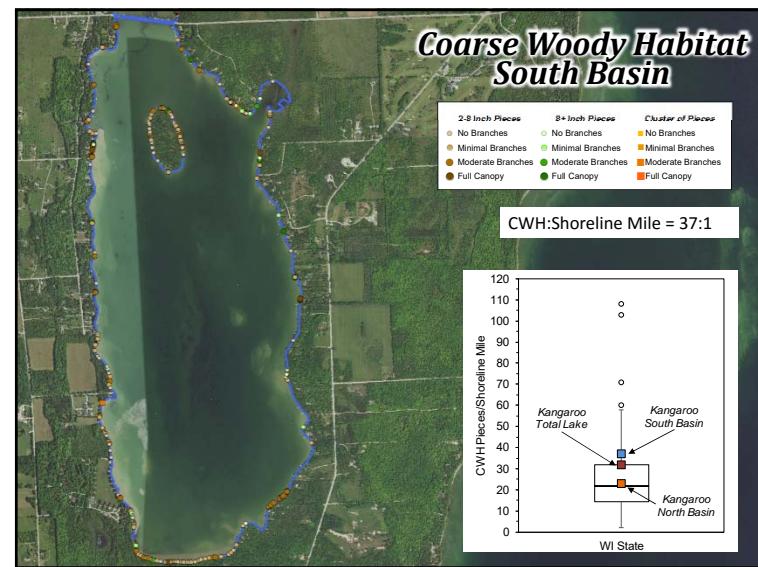

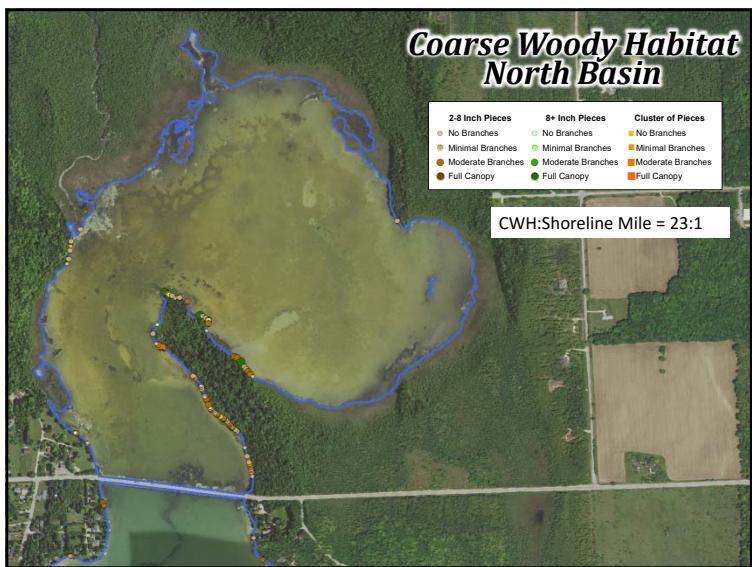

## Coarse Woody Habitat

- Provides shoreland erosion control and prevents suspension of sediments.
- Preferred habitat for a variety of aquatic life.
  - Periphyton growth fed upon by insects.
  - Refuge, foraging and spawning habitat for fish.
  - Complexity of CWH important.
- Changing of logging and shoreland development practices = reduced CWH in Wisconsin lakes.
- Survey aimed at quantifying CWH in Kangaroo Lake

Onterra, LLC  
Lake Management Planning

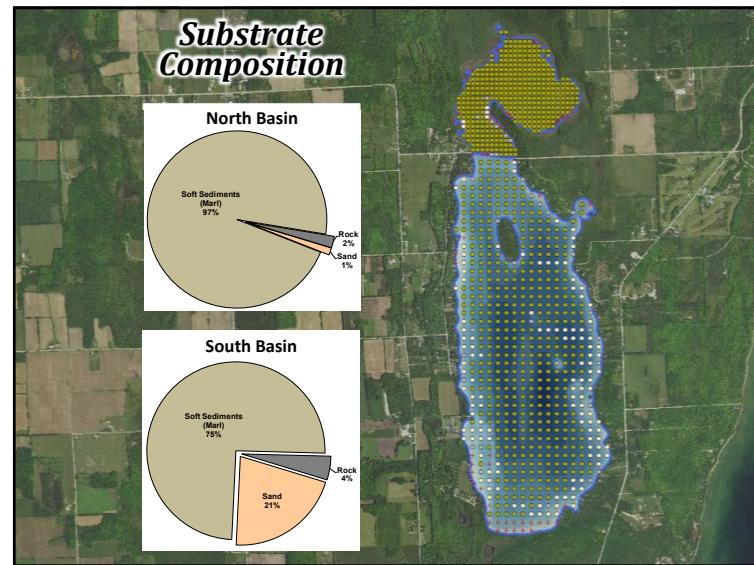

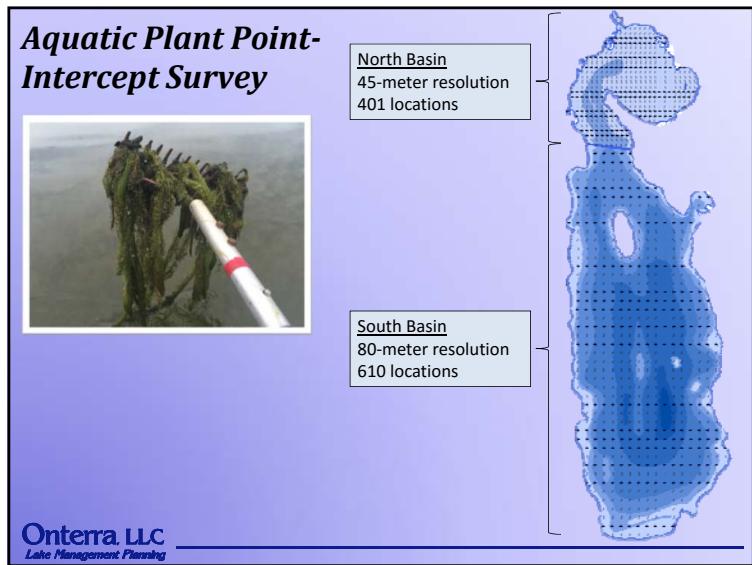

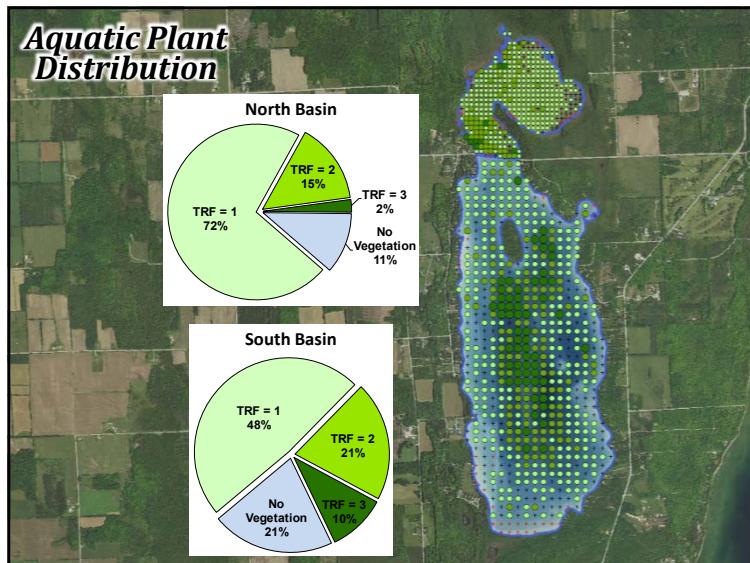

### ***Aquatic Plant Surveys***

- Assess both non-native & native species
- Four surveys completed in 2016
  - Early-Season AIS Survey
  - Whole-Lake Point-Intercept Survey
  - Emergent/Floating-Leaf Community Mapping Survey
  - Eurasian watermilfoil Peak-Biomass Survey

**Onterra, LLC**  
Lake Management Planning

### Aquatic Plant Species

• 28 species located

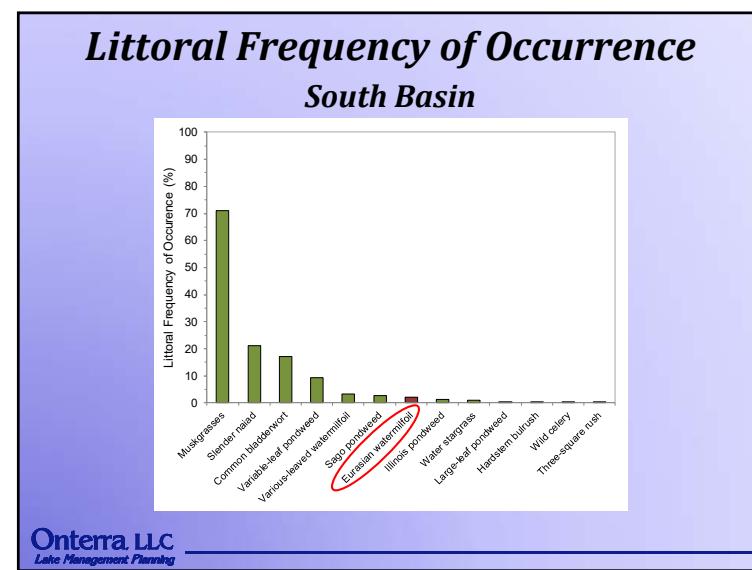

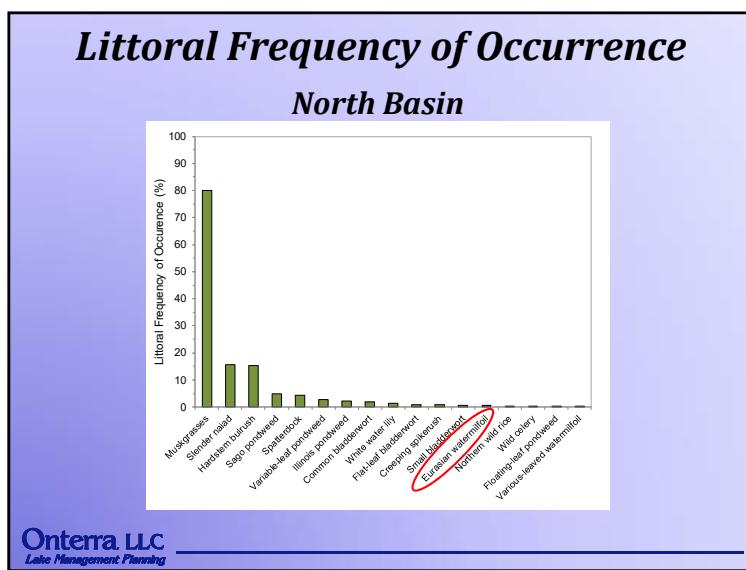

- 23 in North Basin (8 only found here)
- 19 in South Basin (4 only found here)
- 16 found in both basins
- 1 non-native: EWM
- Native *Phragmites* subspecies located in north basin
- Hybrid pondweed

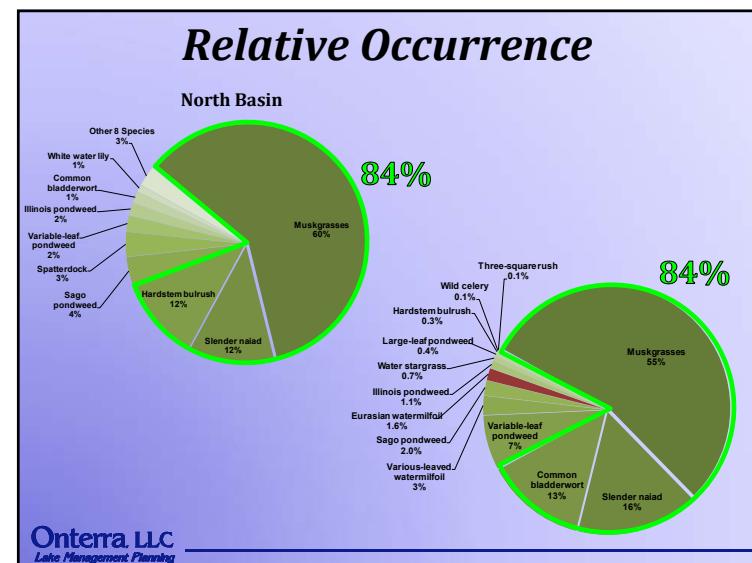

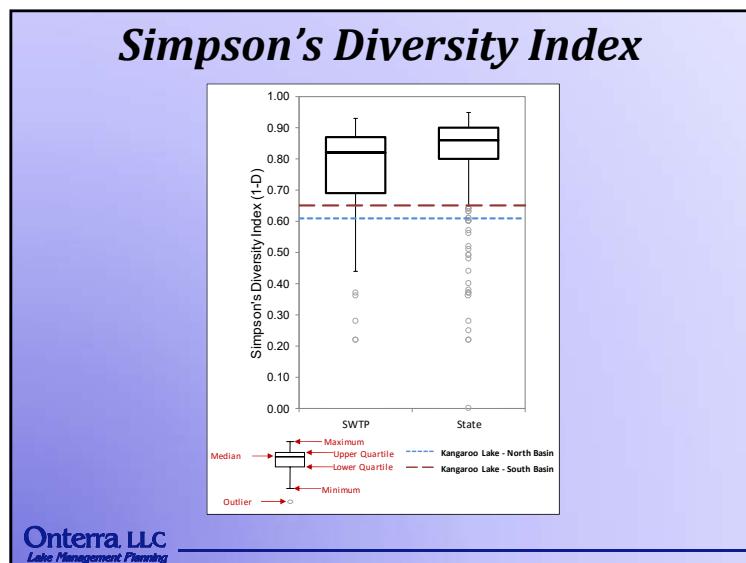

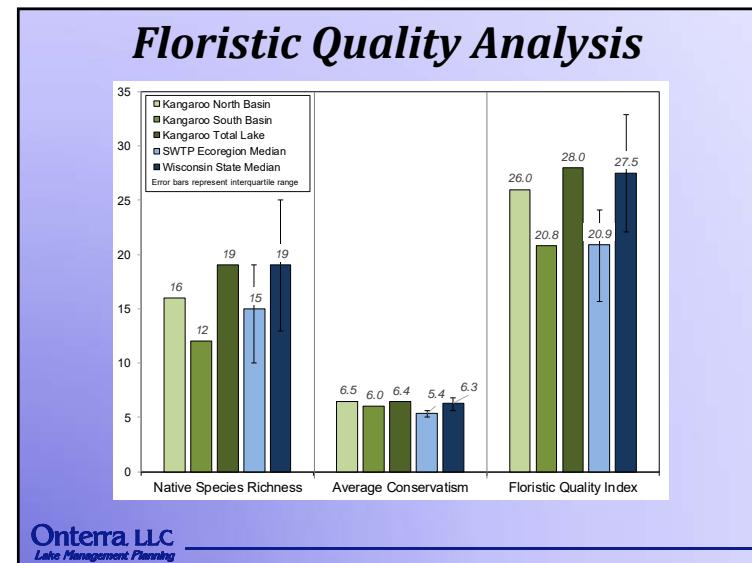

**Growth Form**

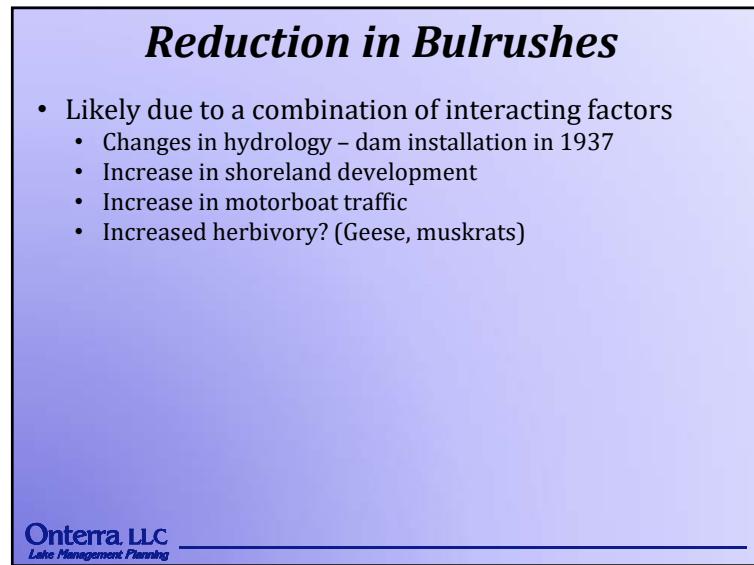

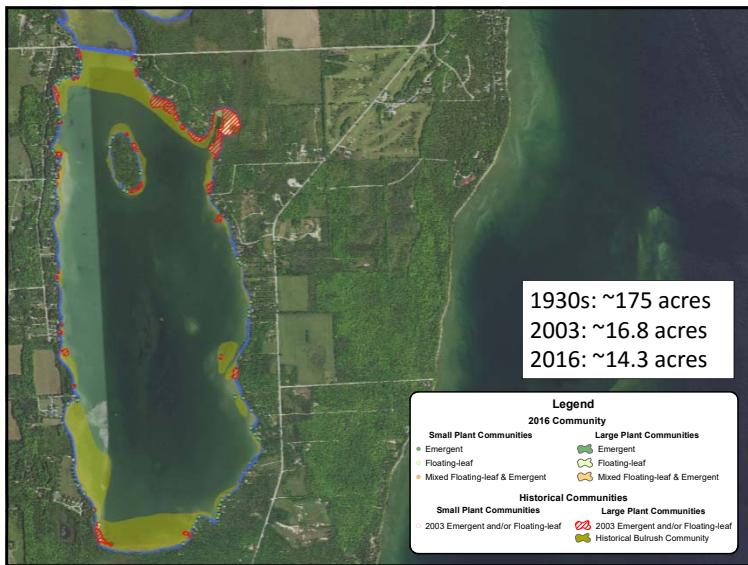

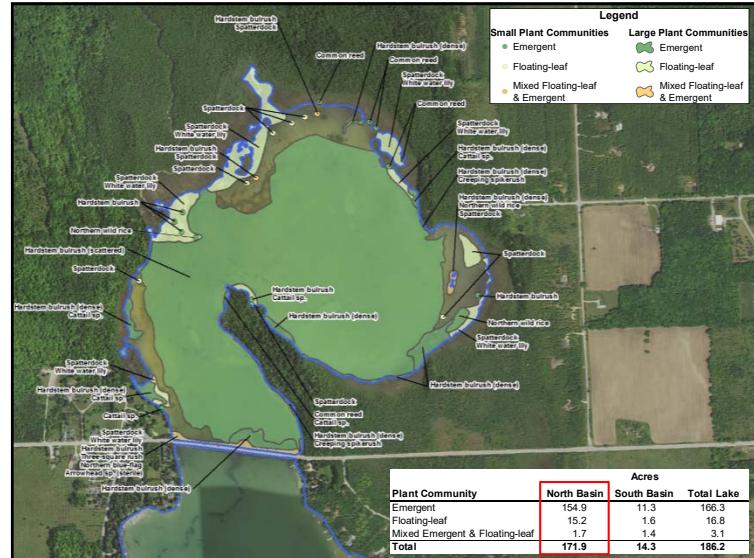

Scientific Name	Common Name	Coefficient of Conservation (C)	South Basin (2003)	South Basin (2016)	North Basin (2003)	North Basin (2016)

FL = Floating-leaf; S/E = Submergent & Emergent; FF = Free-floating

**Onterra, LLC**  
Lake Management Planning

## ***Conclusions***

### **Water Quality**

- Excellent for shallow lowland drainage lake
  - Low phosphorus & chlorophyll-*a*
  - Clarity is lower than predicted based on chlorophyll-*a* due to sediment resuspension, but is still high
  - High concentration of calcium also reduces bio-available phosphorus

### **Watershed & Immediate Shoreland**

- Despite high degree of development in watershed, not significantly impacting lake water quality
- Fast draining soils allow most precipitation to percolate into the ground
- Shoreland in north basin largely undeveloped
- High degree of development of shoreland in south basin
- Degree of CWH higher when compared to other study lakes

**Onterra LLC**  
Lake Management Planning

## ***Conclusions***

### **Aquatic Plant Community**

- Standard analysis indicates high-quality native community
- Low species diversity, but expected for a marl lake (dominance by muskgrasses)
- Hardstem bulrush population smaller than in 2003
- Majority of EWM population in south-central portion of south basin; overall, low abundance within the lake in 2016

**Onterra LLC**  
Lake Management Planning

## ***Next Time...***

- Discuss EWM Management in WI and Kangaroo Lake
- Fisheries Information
- Stakeholder Survey
- Develop the framework for the Implementation Plan

**Onterra LLC**  
Lake Management Planning

## ***Summary of Project Conclusions***

**Water Quality**

- Excellent for a shallow lowland drainage lake

**Watershed & Immediate Shoreline**

- Majority of watershed comprised of agriculture, but...
- Significantly less phosphorus than predicted – quick draining soils
- High degree of shoreland development in south basin; north basin largely undeveloped

**Aquatic Plant Community**

- High species richness for Southeast Wisconsin Till Plains Ecoregion
- Eurasian watermilfoil only non-native plant species located in 2016
- Hardstem bulrush community in south basin ~2.5 acres smaller than in 2003

**Fisheries**

- Some changes have occurred; lake shifting from walleye- to bass-dominated fishery

Onterra, LLC  
Lake Management Planning

## ***Introduction to Lake Water Quality***

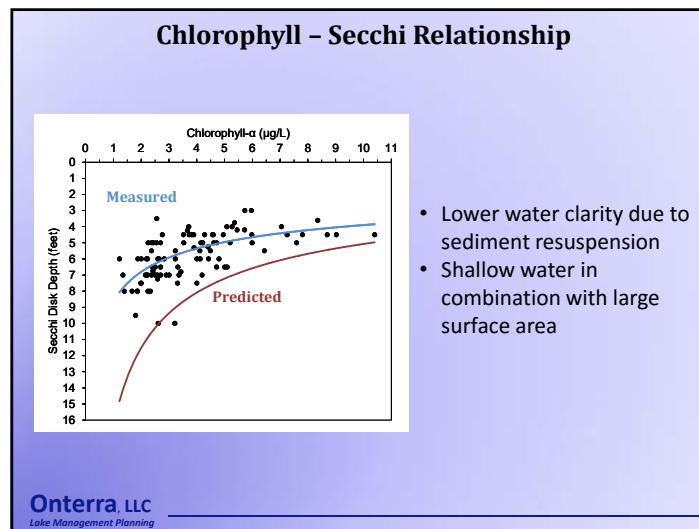

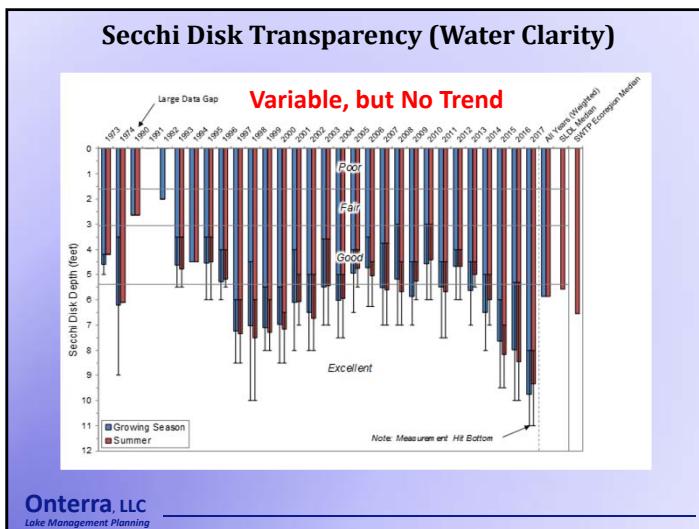

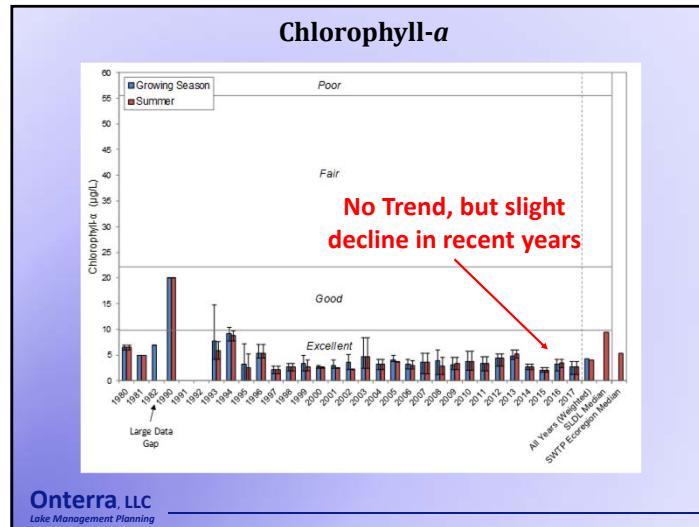

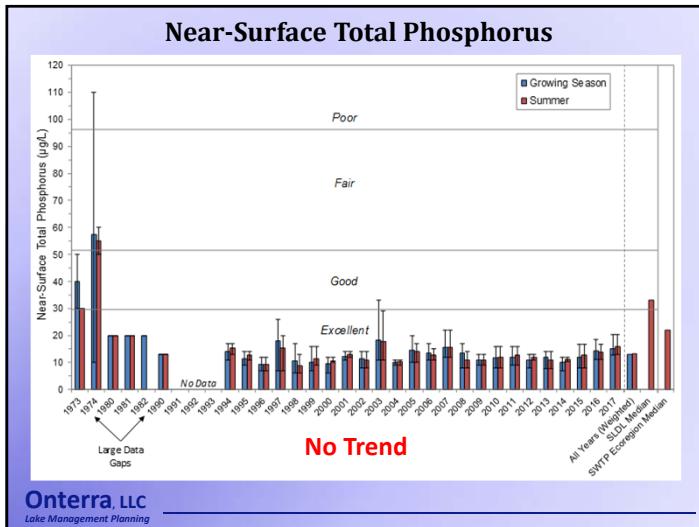

↑ **Phosphorus**  
Naturally occurring & essential for all life  
Regulates phytoplankton biomass in most WI lakes  
Most often *limiting plant nutrient* (shortest supply) **TN:TP = 42:1**  
Human development often increases P delivery to lakes

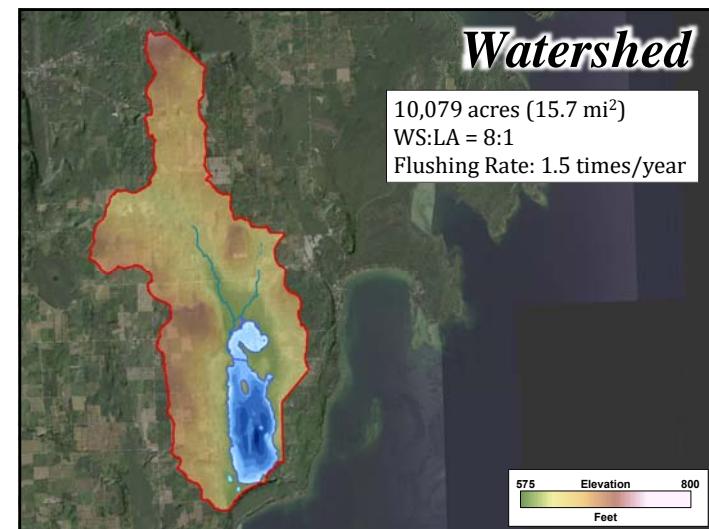

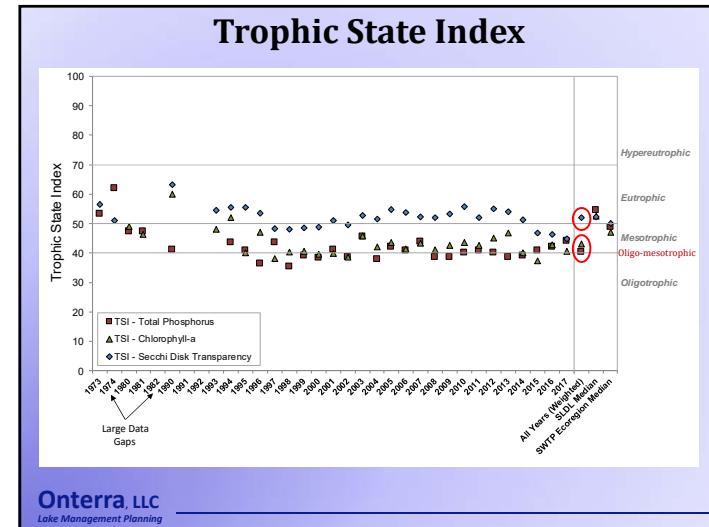

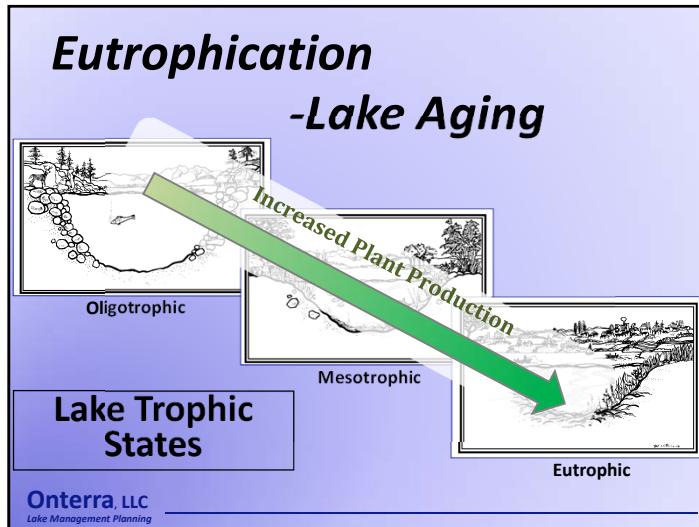

↑ **Chlorophyll-a**  
Pigment used in photosynthesis  
Used as surrogate for phytoplankton biomass

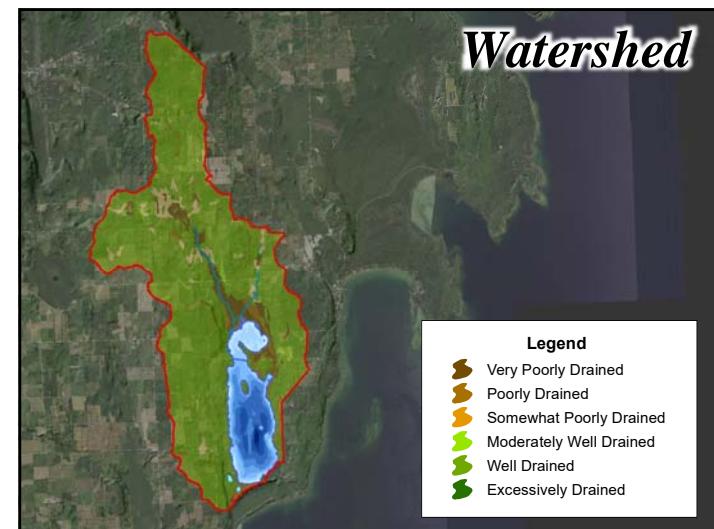

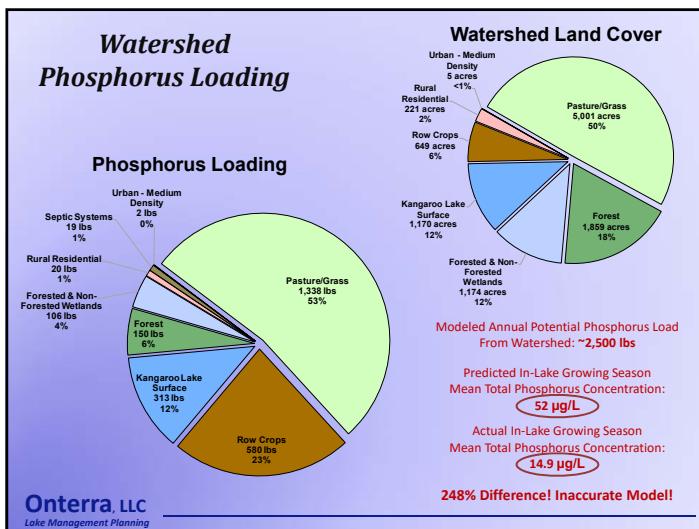

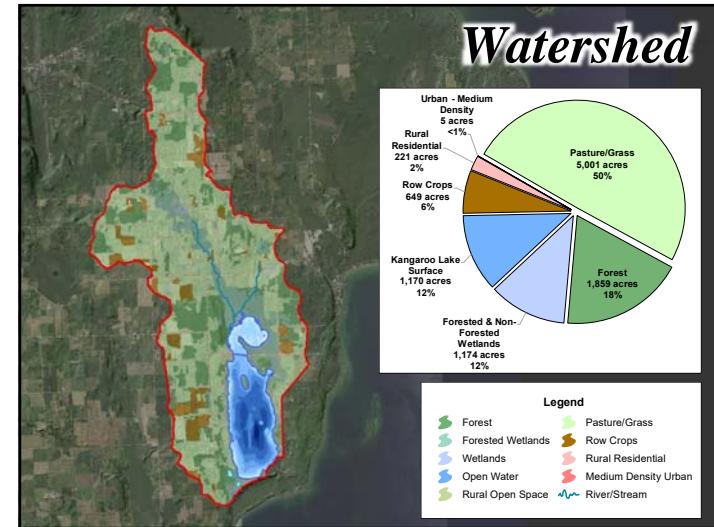

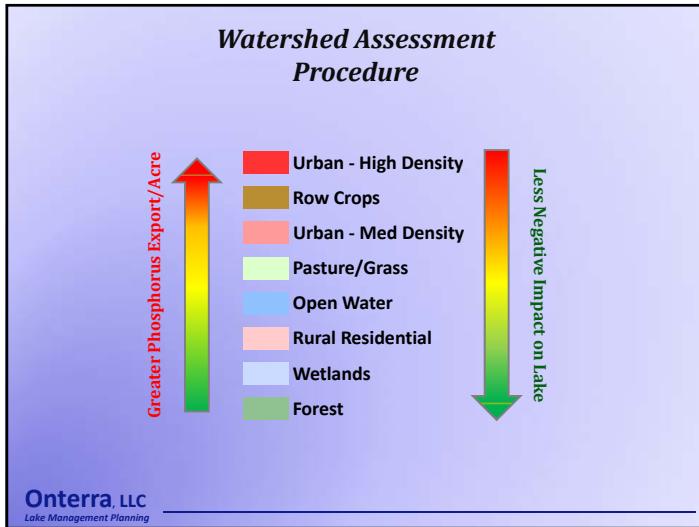

↓ **Secchi Disk Transparency**  
Measure of water clarity  
Measured using a Secchi disk

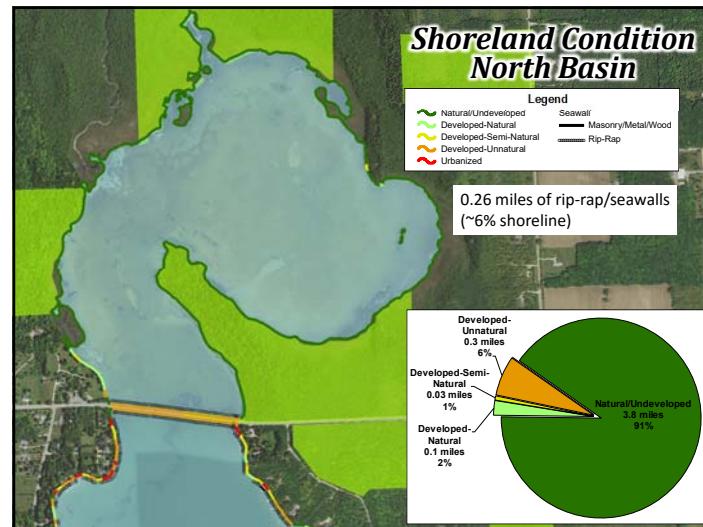

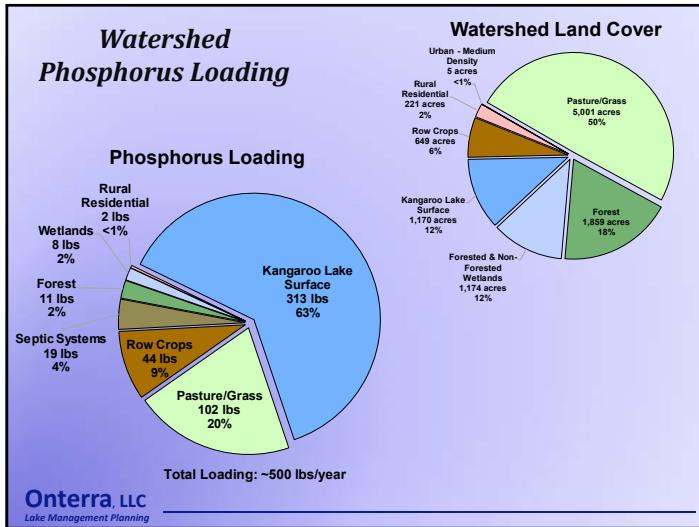

Onterra, LLC  
Lake Management Planning

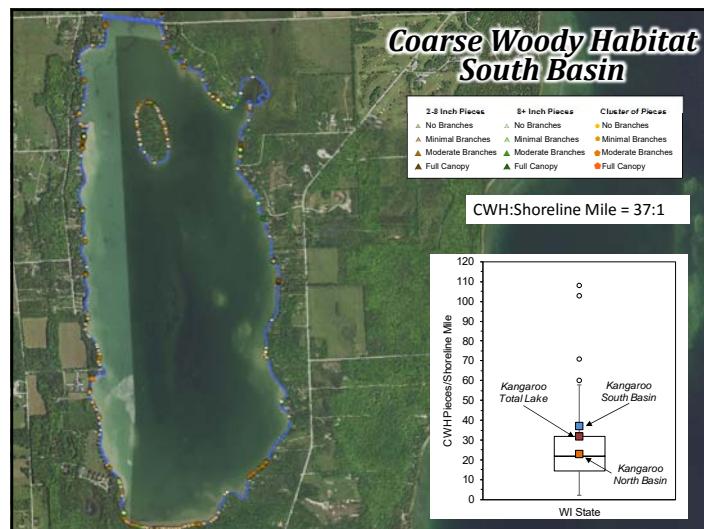

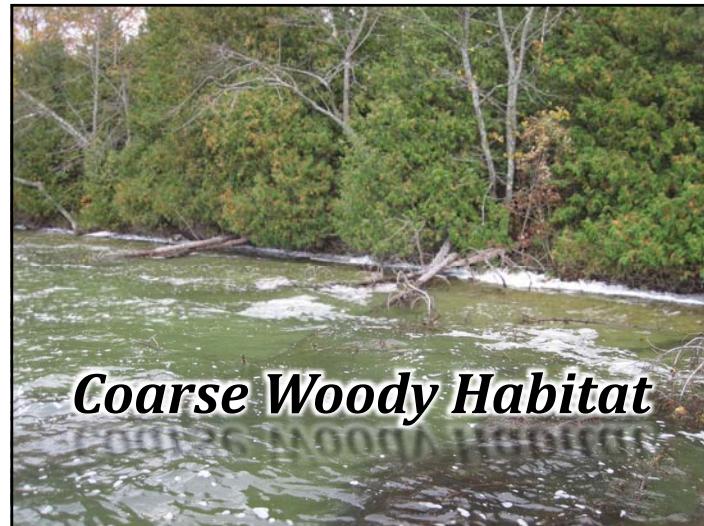

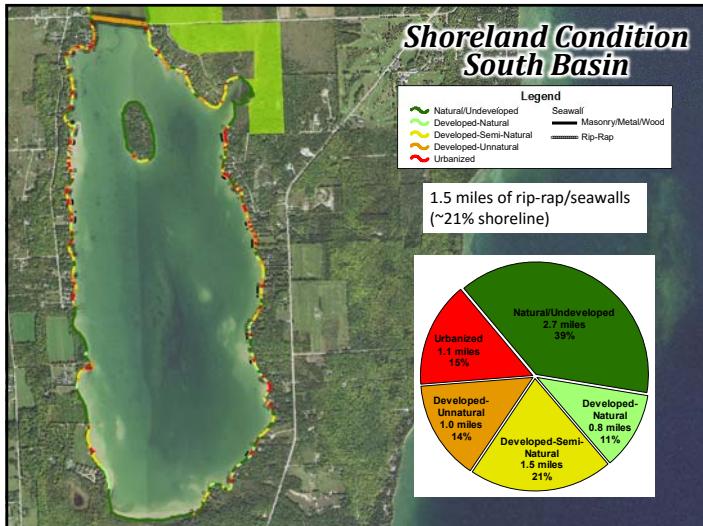

**Management Goal:**  
**Maintain Current Water Quality Conditions**

***Management Actions***

1. Continue monitoring of lakes' water quality through WDNR Citizens Lake Monitoring Network (CLMN)
2. Continue monitoring of Piel Creek water quality through the WDNR Water Action Volunteers (WAV)  
*Important for tracking sudden & long-term changes.*
3. Preserve natural & restore highly developed shoreland areas on Kangaroo Lake to improve habitat, reduce erosion, & protect water quality.
4. Preserve natural land cover within the Kangaroo Lake watershed beyond the immediate shoreland zone.

### Stakeholder Survey Response Charts and Comments

### Kangaroo Lake - Anonymous Stakeholder Survey

Surveys Distributed: 201  
Surveys Returned: 72  
Response Rate: 36%

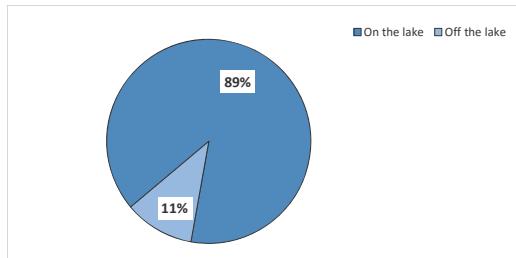

#### Kangaroo Lake Property

1. Do you own or rent your property on or near Kangaroo Lake? If you own more than one property, please select the type of property you have owned the longest. Please refer to this property as you answer the remaining questions in the survey. Please select one choice.

Answer Options	Response Percent	Response Count
Own	100.0%	72
Rent	0.0%	0
<i>answered question</i>		72
<i>skipped question</i>		0

2. Is your property from Question 1 located on the lake or off the lake? Please select one choice.

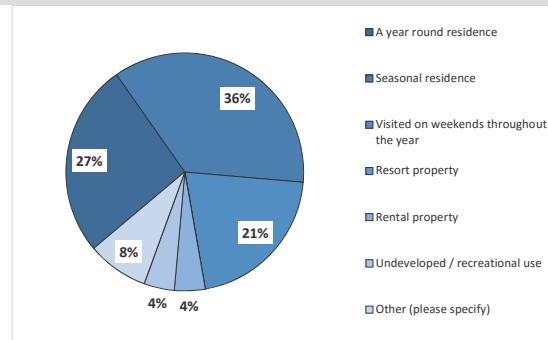

Answer Options	Response Percent	Response Count
On the lake	88.9%	64
Off the lake	11.1%	8
<i>answered question</i>		72
<i>skipped question</i>		0

3. How is your property on or near Kangaroo Lake utilized? Please select one choice.

Answer Options	Response Percent	Response Count
A year round residence	26.4%	19
Seasonal residence	36.1%	26
Visited on weekends throughout the year	20.8%	15
Resort property	0.0%	0
Rental property	4.2%	3
Undeveloped / recreational use	4.2%	3
Other (please specify)	8.3%	6
<i>answered question</i>		72
<i>skipped question</i>		0

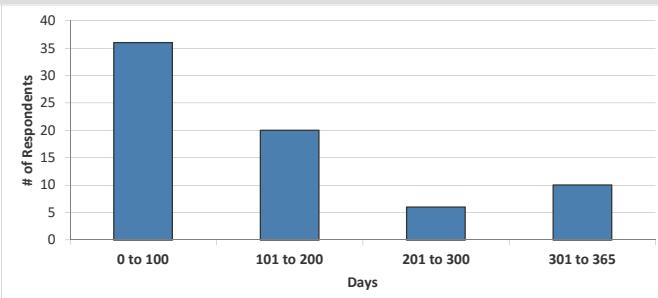

Response	Other (please specify)
1	Periodically rent a cabin on the lake.
2	Seasonal residence winterized
3	Visited as able
4	10 days per month
5	Rental/visited on the weekends
6	Part time all season residence (approx 50% of the year)

4. How many days each year is your property used by you or others? Refer to the property identified in Question 1. Please answer in approximate number of days.

Answer Options	Response Count
<i>answered question</i>	72
<i>skipped question</i>	0

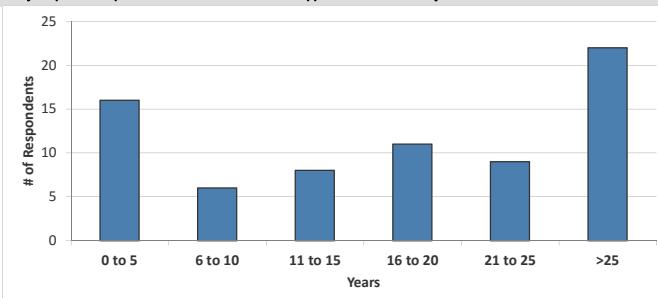

Category (# of days)	Response Count	Response Percent
0 to 100	36	50.0%
101 to 200	20	27.8%
201 to 300	6	8.3%
301 to 365	10	13.9%

5. How long have you owned or rented your property on or near Kangaroo Lake? If less than one year please respond with "1". Please answer in approximate number of years.

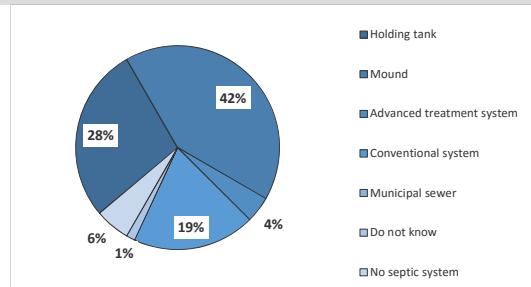

Answer Options	Response Count
<i>answered question</i>	72
<i>skipped question</i>	0

Category (# of years)	Response Count	Response Percent
0 to 5	16	22.2%
6 to 10	6	8.3%
11 to 15	8	11.1%
16 to 20	11	15.3%
21 to 25	9	12.5%
>25	22	30.6%

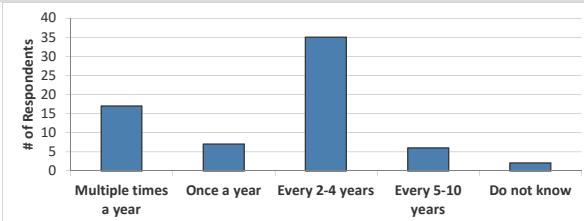

6. What type of septic system does your property utilize? Please select one choice.

Answer Options	Response Percent	Response Count
Holding tank	27.8%	20
Mound	41.7%	30
Advanced treatment system	4.2%	3
Conventional system	19.4%	14
Municipal sewer	0.0%	0
Do not know	1.4%	1
No septic system	5.6%	4
<b>answered question</b>	<b>72</b>	
<b>skipped question</b>	<b>0</b>	

7. How often is the septic system on your property pumped? Please select one choice.

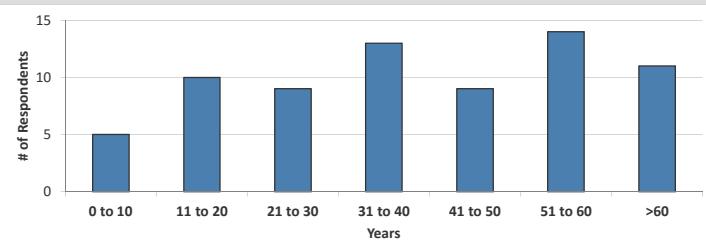

Answer Options	Response Percent	Response Count
Multiple times a year	25.4%	17
Once a year	10.4%	7
Every 2-4 years	52.2%	35
Every 5-10 years	9.0%	6
Do not know	3.0%	2
<b>answered question</b>	<b>67</b>	
<b>skipped question</b>	<b>5</b>	

*Recreational Activity on Kangaroo Lake*

8. How many years ago did you first visit Kangaroo Lake? Please answer in approximate number of years. If less than 1 year please type "1".

Answer Options	Response Count
<b>answered question</b>	<b>71</b>
<b>skipped question</b>	<b>1</b>
<b>Category (# of years)</b>	<b>Response Count</b>

	22
<b>answered question</b>	<b>22</b>
<b>skipped question</b>	<b>50</b>

Number	Response Date	Response Text	Categories
1	Dec 12, 2016 3:04 PM	If this survey is anonymous why do you have a unique ID on the front page	
2	Dec 6, 2016 4:17 PM	I do not understand why septic issues were listed as a problem. for some years now, there has been aggressive program by D.C. Sanitary to eliminate failing system. Since these recent years, whether or not that is an issue, Kangaroo Lake quality has gradually improved over 11-15 years. Also, fishing has clearly improved. I wonder whether prop boats or jet boats, and skis, are more problematic. You did not ask about schistosomiasis. It is a problem at a certain water temperature.	
3	Dec 5, 2016 6:07 PM	I think there should be more open conversation with new owners. le just suggestions, outboards are better than io as lake is shallow etc as example	
4	Dec 2, 2016 6:07 PM	Motor boats are always at the top of KLA's concerns - on the 4th of July weekend there was a maximum of 4-5 boats on the lake at one time. The lake is to be used and enjoyed. The DNR has strict guidelines. KLA should respect those guidelines and stay out other rules - it just turns neighbor against neighbor	
5	Nov 29, 2016 8:32 PM	KLA is doing an excellent job.	
6	Nov 28, 2016 11:34 PM	Thank you for keeping the KLA members informed. Not sure of the appropriateness of invasive plant species being used for fish sticks. The trees were free from the Nature Cons. who was removing non-native species - why would they be used to possibly "contaminate" the lake area with non-native species?	
7	Nov 28, 2016 9:41 PM	Although we grew up in Wisconsin and often vacationed in Door County with rental cabins on Kangaroo Lake, we now live in Tulsa, OK. We still own land near KL and visit Door County every few years, which we always find relaxing and attractive. Keeping Kangaroo Lake in pristine condition would seem to be a priority to us.	
8	Nov 28, 2016 4:10 PM	We're very happy with the work of KLA and other agencies in managing out lake.	
9	Nov 28, 2016 12:21 AM	My biggest concerns are stopping the spread of the invasive milfoil and developing a strategy to make Kangaroo Lake a decent game fishing lake once again.	
10	Nov 27, 2016 8:11 PM	I believe there are inconsistencies in the enforcement of rules and laws governing the preservation of Kangaroo Lake	
11	Nov 27, 2016 2:23 PM	Great lake	
12	Nov 26, 2016 6:25 PM	KLA is a fabulous organization which educates regularly. If I have answered incorrectly it is my fault!	
13	Nov 26, 2016 2:54 PM	need more fish	
14	Nov 25, 2016 10:35 PM	We have concern about the excessive plant growth on the north side of the causeway.	
15	Nov 23, 2016 3:24 PM	Although I am not a fisherman, members of my family are both skilled and enthusiastic fishermen. They no longer waste time trying to fish on our lake - they go elsewhere. Our lake will never be a great fishing lake. Kangaroo Lake is a "puddle" - a much beloved puddle, but a small, shallow lake. I believe it is a waste of time trying to make it into something it never was and never will be. I believe the clarity of the lake water is very good. When I first came, I recall it being quite good also, but there was a period where the lake was very cloudy, so things have improved. I believe efforts to curb powerboat traffic have gone far enough. Burdening all with restrictions when only a few cause problems is inappropriate. There are two properties on the lake with two jet skis. The owners/guests of those two places abuse the lake by doing substantial figure-8s and wheelies. Settle them down, don't restrict all because of the misdeeds of a few. I catch all the fish I want to at the Cornerstone Pub on Friday night, and the hot German Potato salad is great. I will look forward to seeing some of my comment in the survey - in past surveys my comments never seem to make the final cut.	
16	Nov 22, 2016 11:06 PM	The KLA has significantly helped us know and care for our lake. The website has excellent information. Volunteer efforts are increasing. KLA needs to expand outreach efforts to non-members and members to increase awareness of concerns and proactive ways of protecting the lake. Current members should celebrate our achievements and be grateful to our leaders over the years. We are a leader in the state but we can improve our efforts through greater involvement and participation. We applaud the partnerships with WDNR, The Nature Conservancy, Town of Baileys Harbor, The Ridges Sanctuary, Door County, etc.	
17	Nov 22, 2016 12:22 AM	Our cottage was built by my grandparents when I was 7 years old and our family has enjoyed it ever since. It would be nice to have some walleyes, perch planted as we enjoy fishing and it has really declined in recent years.	
18	Nov 16, 2016 7:51 PM	Boats are getting bigger on the lake with greater hp. There should be done kind of limits imposed and monitored at the boat launch	
19	Nov 16, 2016 2:49 PM	I have been a life long advocate proposing county wide protection of all Door County Lakes, marshes, and watersheds with specifically an emphasis on sand dunes. myself having put a Conservation Easement through the Nature Conservancy on the deed of my property. The Kangaroo, Clarke, and Europe Lakes dunes and water sheds are all of the most intricate protective part in the life of the lake and should all be treated and protected with the HIGHEST of regard involving county zoning and protection. The KLA has done virtually NOTHING for the past 20 years regarding this situation and that is why I am no longer a member. Every property owner with environmentally sensitive property should be contacted with a recommendation of Conservation Easement involving protection of said wetlands, dunes, Heins Creek and watersheds found involving the tail of the Kangaroo swamps. At Whitefish Dunes State Park you are not allowed to step off the wooden walkways where in as much at Kangaroo Lake Dunes, which are no lesser the value, your allowed to build on them and run your sewage through them no questions asked. You all know who I am and I would be more than willing to talk to someone...anyone regarding this coarse of action and the necessity involving it. J.M.N.	
20	Nov 15, 2016 12:55 AM	Thank you for coordinating this important fact finding survey.	
21	Nov 12, 2016 3:56 PM	My family has been on the lake for 134 years and there has been changes but overall I believe people here really care about the health and environment of our lake.	
22	Nov 11, 2016 7:56 PM	I wish Baileys Harbor would extend the sewage system to include Kangaroo Lake to protect the land and lake. Not sure if landowners septic systems are effecting the lake!

### Watershed Analysis WiLMS Results

**Date: 2/16/2017 Scenario: Kangaroo Lake Direct Watershed Current**

Lake Id: Kangaroo Lake

Watershed Id: 0

**Hydrologic and Morphometric Data**

Tributary Drainage Area: 8907.0 acre

Total Unit Runoff: 9.00 in.

Annual Runoff Volume: 6680.3 acre-ft

Lake Surface Area <As>: 1170.0 acre

Lake Volume <V>: 7107.0 acre-ft

Lake Mean Depth <z>: 6.1 ft

Precipitation - Evaporation: 3.9 in.

Hydraulic Loading: 7060.5 acre-ft/year

Areal Water Load <qs>: 6.0 ft/year

Lake Flushing Rate <p>: 0.99 1/year

Water Residence Time: 1.01 year

Observed spring overturn total phosphorus (SPO): 12.6 mg/m<sup>3</sup>

Observed growing season mean phosphorus (GSM): 14.9 mg/m<sup>3</sup>

% NPS Change: 0%

% PS Change: 0%
