

## Harvester GPS System

ASPL-004-04

The reason we got the GPS system was to cut the curly leaf pondweed earlier. With this system we can cut before the curly leaf surfaces. We can also cut when the wind reduces our visibility. With this system we have reduced our cost of harvesting because we have less overlapping and also we don't leave big strips which we would have to go back and cut again. I feel it has made our harvesting much more efficient. It eliminates the guess work when cutting. We made have saved 15% or more.

Frank Koshere and I gave a presentation on our GPS System at the Wisconsin Assn. of Lakes ~~at~~ ~~the~~ Convention at Green Bay. I have had several people call me ~~about~~ about the GPS system. Frank usually gives them my name and number.

Thanks

Pat Mahoney
