5. Additional Information. (Space will expand to fit your text.)

The total TRM grant was not expended for this project due to the addition of EQIP funding for part of the project. The EQIP funding was not awarded until after the TRM grant had been awarded. We still achieved the original project goals at a little over half of the TRM dollar amount that was projected for the project.

6. Summary of Project Challenges. (Space will expand to fit your text.)

The Murphy Farms Project was a typical manure storage project for a sand bedded freestall operation in Waupaca County. The challenge is to develop a system in which sand laden manure can be successfully transferred to, stored in, and emptied out of in a safe, convenient and reliable design. A typical design for such a project involves a separate transfer system for both manure and milkhouse waste to prevent sand from settling out in a transfer and plugging underground pipes thereby making an expensive system useless. This design was successfully implemented at Murphy Farms.
