Kris,

We received the materials specified on our Small Lake Planning Grant #SPL-253-11 and used them the first time May 8<sup>th</sup>. While there will be a period of learning to use the equipment, our first experience proves it to be a more efficient and pleasing way to measure both dissolved oxygen and water temperature.

Materials received as listed in the grant:

- 1 YSI Pro20 meter
- 1 Pro20 10 meter cable assembly kit
- 1 Dissolved oxygen probe and Polarographic sensors.

Results of our tests are posted on the SWIMS data base along with all other CLMN data for Kirby Lake.

Many thanks. You have been most helpful on this project.

Sincerely,

David R. Andreasen, Self Help Volunteer
