**B. Project Results Narrative**

All runoff from the existing animal lot was directed to the new manure storage. This project was complete with the construction of a manure transfer system and manure storage facility sized and plumbed to contain milkhouse waste as well as barnyard runoff. Another feedlot was abandoned with out cost sharing and the cows brought to this site where they are housed in a new freestall barn also built at landowner expense. The BARNY data above does not reflect the additional pollution reduction from the abandonment of the other feedlot.

**4. Satisfaction of Notice Requirements (if applicable)**

If cost sharing for this project was offered under a formal notice to achieve compliance with performance standards or prohibitions, provide information for each notice in the table below.
