**B. Project Results Narrative**

The Village of Sherwood purchased land, designed and constructed the Meadowcliff Pond. The Meadowcliff Pond reduces non-point source pollution prior to discharging to the Village's storm sewer system (MS4) and ultimately to Lake Winnebago. The project was designed using SLAMM V9.1.1 and SWMM in November 2005. The pond provides 80% TSS removal and 50% removal of phosphorus, as was indicated in grant application. The Village also developed a construction erosion control ordinance and a post-construction runoff ordinance. Both ordinances were adopted the Village Board and became effective on March 24, 2008.

**4. Satisfaction of Notice Requirements (If applicable)**

If cost sharing for this project was offered under a formal notice to achieve compliance with performance standards or prohibitions, provide information for each notice in the table below.

**5. Summary of Project Challenges**

Purchasing the property and working to satisfy the property owners requests took much time and effort. Adjustments to the project occurred during design and construction to accommodate property owners and Village residents. In July/August 2006 the Meadowcliff Pond grant project was amended to include additional storm sewer work to address low areas adjacent to the fill property.

**6. Additional Information about the Project (optional)**

The grant coordinators were very accomodating in dealing with project questions and reviewed information in a timely manner.
