B. Project Results Narrative

The acres to "T" equal 1801. Some of those include revisions to old plans from USLE to RUSLE 2. The clean water diversions are ones that already existed. Nothing new constructed through this grant. The numbers in this report reflect actual "installed" numbers.

No manure storage facilities were constructed or abandoned through this grant. There are 2 existing manure storage structures that meet NR 151 requirements. 3 landowners completed nutrient management plans on their farms using SNAPPLUS. This was done without cost-sharing.

One barnyard runoff control system was constructed - brining the actual "p: down to 3.3 pounds from 22.7 pounds.

Streambank Protection completed through this project includes:

- 178 Feet Stream Crossings
- 745 Feet Streambank Rip Rap
- 260 Feet Streambank Shaping
- 2029 Feet Streambank Fencing

Overall, this project accomplished more than we planned for as far as erosion and sediment control. Landowner participation was outstanding! We were able to bring all of the farms we were working with into full compliance with NR151.

The only challenges of the project was the weather and timing with crops and construction.

4. Satisfaction of Notice Requirements (if applicable)

If cost sharing for this project was offered under a formal notice to achieve compliance with performance standards or prohibitions, provide information for each notice in the table below.
