B. Project Results Narrative

Please see Report prepared by James Amhrein for delisting to USEPA.

The DNR selected the West Branch of the Sugar River as a project through the new Targeted Resource Management (TRM) Program. The Dane County Land Conservation Department (LCD) received a \$125,000 grant to install conservation practices within one-and-a-half years.

A local work group comprised of LCD, DNR, landowners and operators, Upper Sugar River Watershed Association (USRWA), Deer Creek Sports and Conservation Club (DCSCC) and Trout Unlimited (TU) developed a management plan in early 2002. Streambank protection and fish habitat restoration were prioritized on the river. The LCD and DNR fish management staff oversaw the project installation. DCSCC and USRWA provided in-kind labor for the construction of fish habitat structures. DCSCC has received 20-year, 33-foot-wide easement on the project area for public access.

The installation of this project began in August and finished up in early October. Practices were installed on three different properties include 3,000 feet of riprap and edging, 11,205 feet of shaping and seeding, 240 fish habitat structures and 13 acres of critical area seeding.

The total project cost \$192,088.50. DNR provided \$119,330.50 from the TRM program and USDA Natural Resources Conservation Service funded \$24,758.00 from the Wildlife Habitat Incentives Program (WHIP) \$48,000.00 from other non-profits DCSCC and USRWA.
