## APPENDIX A

---

**Public Participation Materials**

## ***Presentation Outline***

- Onterra, LLC
- Why Create a Management Plan?
- Elements of a Lake Management Planning Project
  - Data & Information
  - Planning Process
- 2010 Treatment Monitoring
- Recommendation for 2011

A circular inset image showing a group of ducks swimming in a pond.

## ***Onterra, LLC***

- Founded in 2005
- Staff
  - Four full-time ecologists
  - One part-time ecologist
  - One field technician
- Services
  - Science and planning
- Philosophy
  - Promote realistic planning
  - Assist, not direct

A photograph showing a group of people sitting on a small boat on a lake.

## ***Why create a lake management plan?***

- To create a better understanding of lake's positive and negative attributes.
- To discover ways to minimize the negative attributes and maximize the positive attributes.
- To foster realistic expectations and dispel myths.
- To create a snapshot of the lake for future reference and planning.

A goal without a plan is just a wish!

A photograph of tall reeds growing in a body of water.

## ***Elements of an Effective Lake Management Planning Project***

### **Data and Information Gathering**

*Environmental & Sociological*

### **Planning Process**

*Brings it all together*

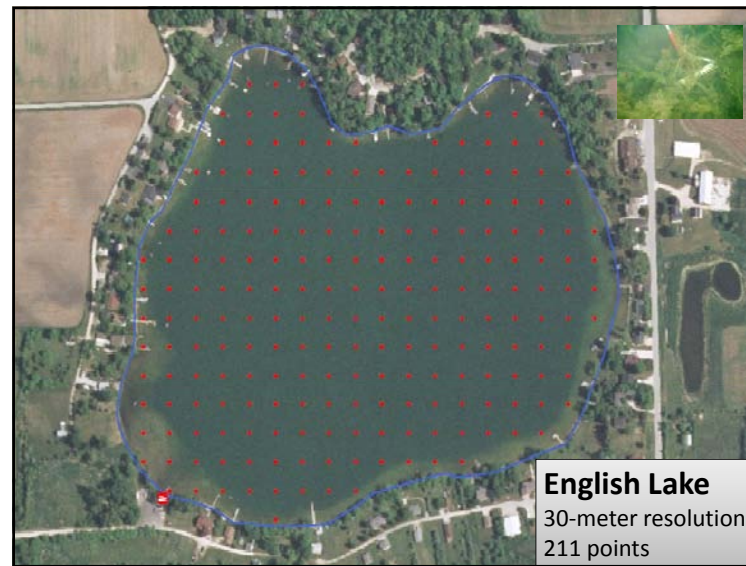

## ***Data and information gathering***

- Aquatic Plant Surveys
  - AIS (CLP & EWM) *Updated methods & compare to past surveys*
  - Comprehensive
- Water Quality Analysis *Update & compare*
- Watershed Assessment *Review (only moderate changes)*
- Shoreline Assessment *Evaluate shoreline condition*
- Fisheries Data Integration *Include available data*
- Stakeholder Survey *Official WDNR-approved survey*

## ***Aquatic Plant Surveys***

- Concerned with both native and non-native plants
- Multiple surveys used in assessment
  - Curly-leaf pondweed survey
  - Point-intercept survey
  - Plant community mapping

### ***Shoreland Assessment***

- Shoreland area is important for buffering runoff and provides valuable habitat for aquatic and terrestrial wildlife.
- It does not look at lake shoreline on a property-by-property basis.
- Assessment ranks shoreland area from shoreline back 35 feet

#### **Urbanized**

#### **Natural**

### ***Fisheries Data Integration***

- No fish sampling completed
- Assemble data from WDNR, USGS, & USFWS
- Fish survey results summaries (if available)
- Use information in planning as applicable

### ***Stakeholder Survey***

- Standard survey used as base
  - Planning committee develops additional questions and options
  - Must not lead respondent to specific answer through a “loaded” question
- Survey must be approved by WDNR

### ***Planning Process***

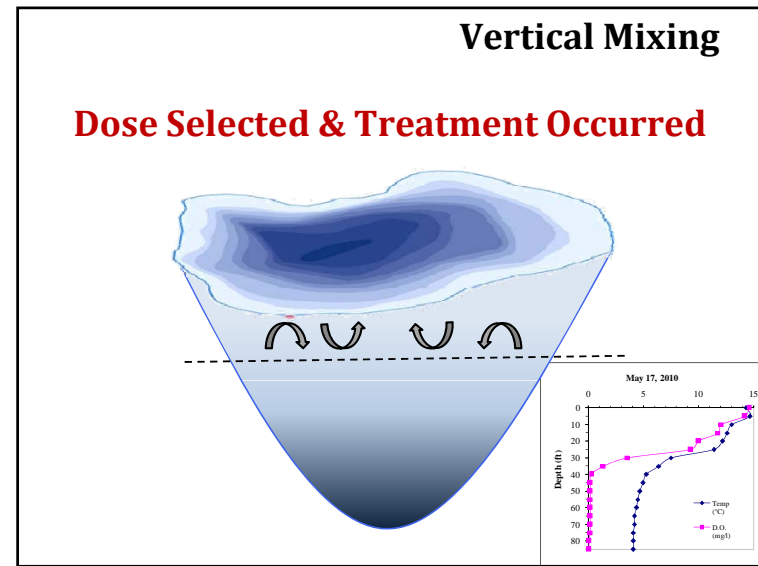

#### ***Planning Committee Meetings***

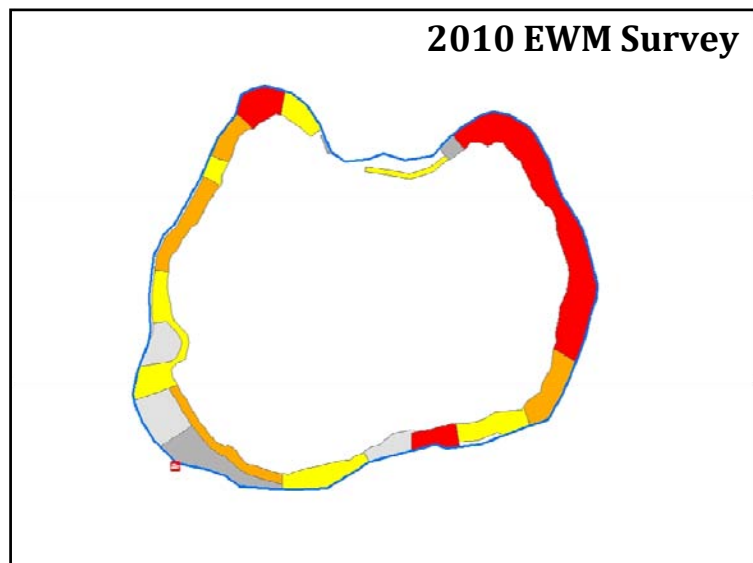

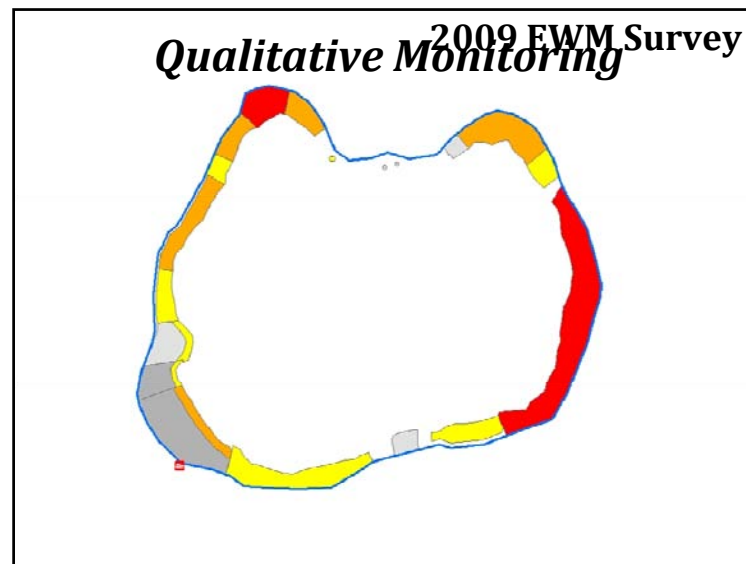

Study Results (including a stakeholder survey)  
Conclusions & Initial Recommendations

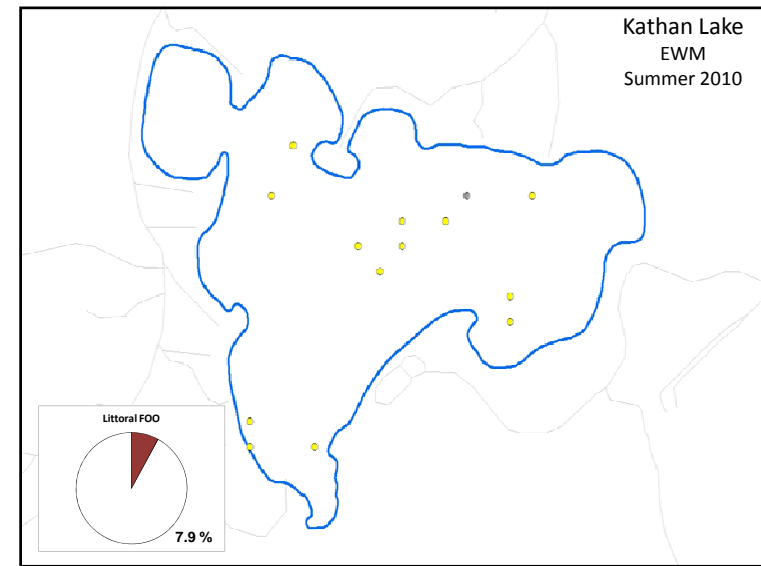

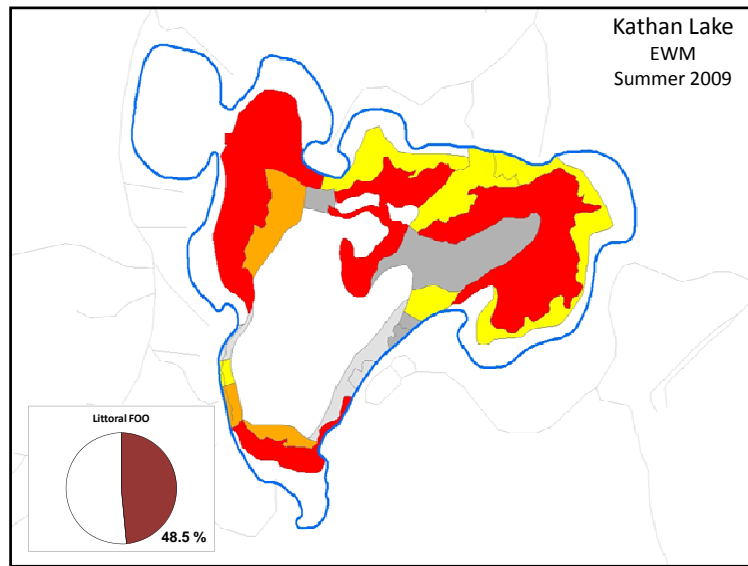

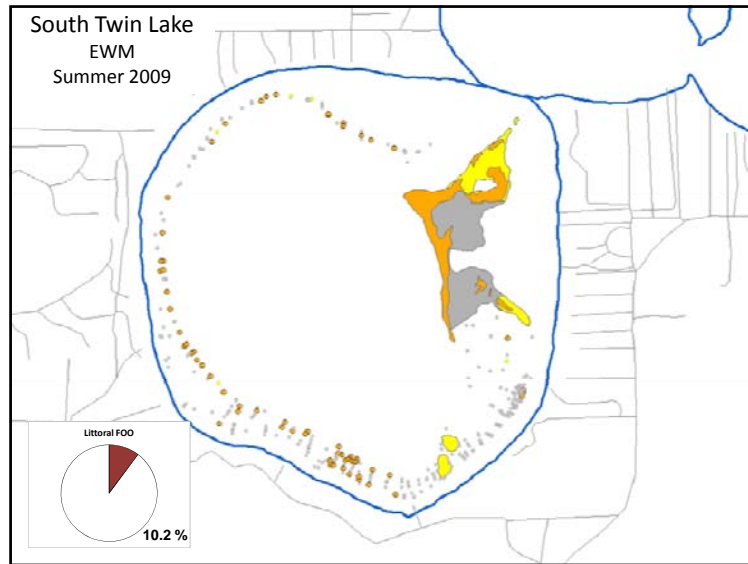

Management Goals  
Management Actions  
Timeframe  
Facilitator(s)

***Implementation Plan***

## Residual Herbicide Monitoring

## 2010 Treatment Results

- Results did not meet expectations
- Likely not a dosing issue
- Possible contributing factors to lack of effectiveness
  - pH: English Lake has a high pH
    - Herbicide formulation used (amine) not as susceptible to pH issues as other formulation (ester)
  - EWM genetics (tolerant strain)
    - Plant have not had DNA analysis (will this summer)
  - Filamentous algae covering EWM during treatment
    - No scientific evidence supports this claim
    - Herbicide was in water for at least 15 days

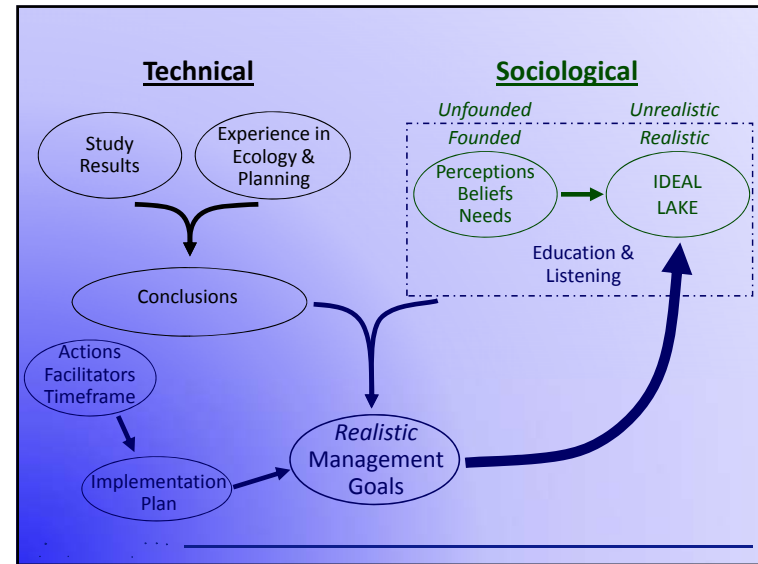

## What is the next step?

- Options
  - **Retreat at higher dose**
    - This may impact important native species and still not control EWM.
  - **Treat at same dose if filamentous algae is not present**
    - Likely a waste of money
  - **Do not treat until better information is available**
    - Most prudent option with information at hand
    - Recommended by WDNR
    - Important to continue monitoring

# Thank You

Onterra LLC  
Lake Management Planning**

## Presentation Outline

- Lake Management Planning Project Overview
- Study Results
  - Water Quality
  - Watershed
  - Aquatic Plants
  - Eurasian Water Milfoil
- “Big Picture”
- Stakeholder Survey
- Management Goals

## Study and Plan Goals

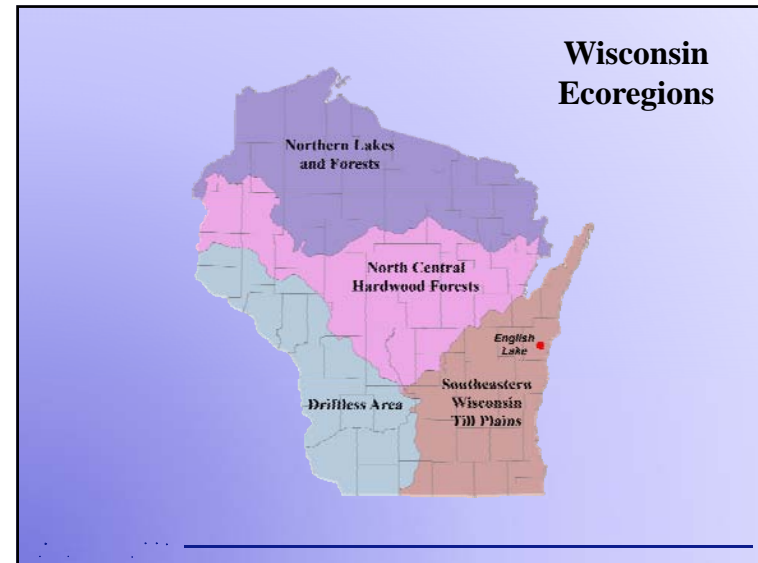

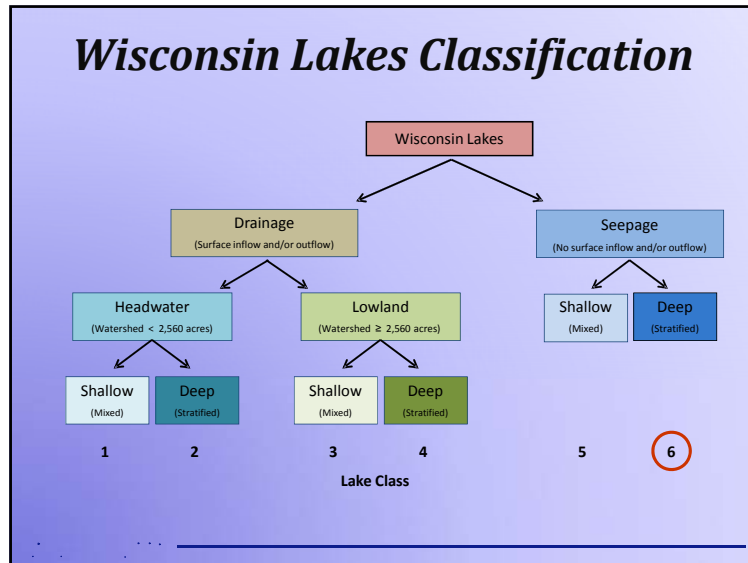

- Collect & Analyze Data
- Construct Long-Term & Useable Plan

## Water Quality

- ↑ **Phosphorus (Limiting Plant Nutrient)**  
*Nitrogen:Phosphorus 51:1*
- ↑ **Chlorophyll-*a* (Algal Abundance)**
- ↓ **Water Clarity (Secchi Disk)**

### Dissolved Oxygen and Temperature Profiles

#### • Dissolved Oxygen and Temperature Profiles

- English Lake has a small surface area and a high mean depth (36 feet)
  - Lake is **dimictic**: mixes (turns over) 2 times/year; early spring and late fall
  - Lake remains thermally stratified between mixing events and develops anoxic hypolimnion (bottom layer)

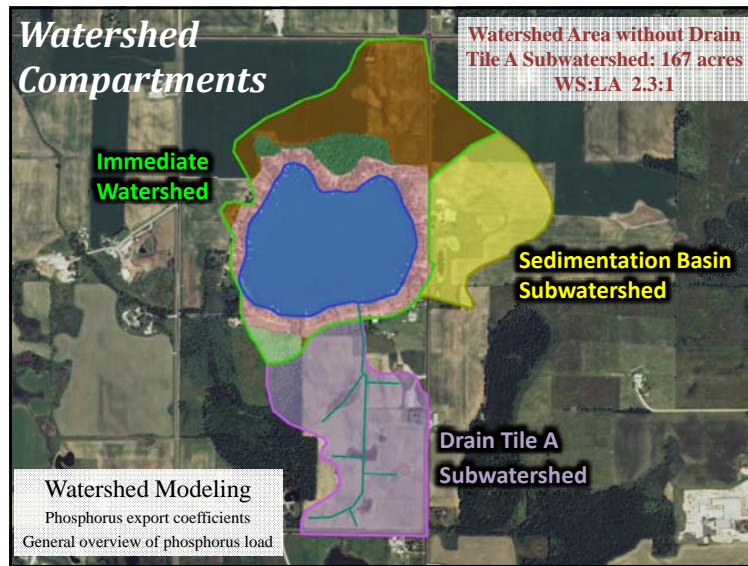

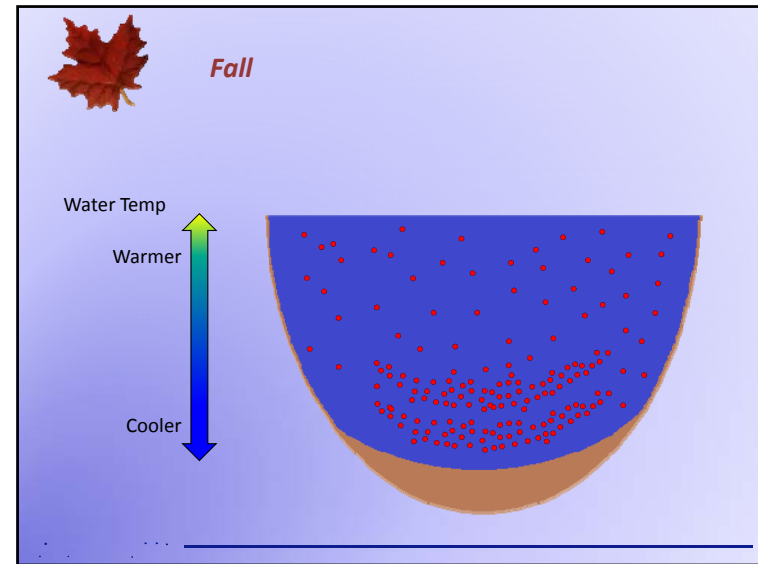

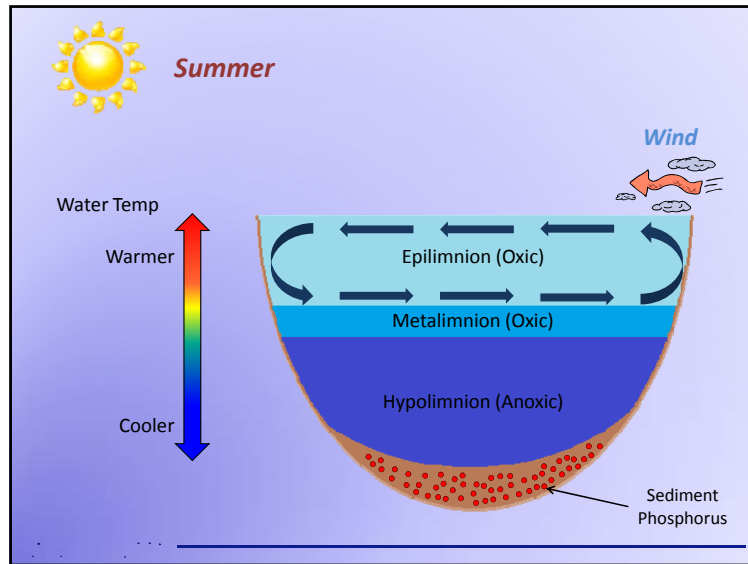

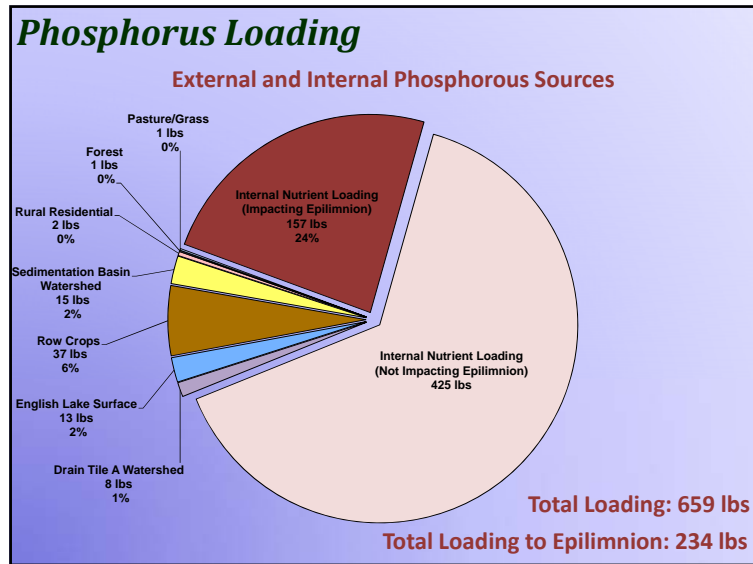

### Discrepancy between WiLMS watershed modeling predicted phosphorus and 2010 field measurements

#### • Unaccounted source(s) of phosphorus

- Likely due to internal phosphorus loading from bottom sediments
  - When lake is stratified, anoxic hypolimnion (bottom layer) causes release of phosphorus from sediments
  - Bottom phosphorus levels increase throughout the summer while surface levels decrease
  - Phosphorus from the bottom diffuses throughout the water column in early spring and late fall
  - Late fall epilimnion phosphorus levels may persist through winter
  - Additional diffusion in spring leads to higher algal growth rates throughout summer

### Species List

- 13 Native Species
- 1 Non-native Species
  - Eurasian water milfoil
  - Curly-leaf pondweed?

| Life Form  | Scientific Name                                 | Common Name                                | Coefficient of Conservatism (c) |
|------------|---|--|---------------------------------|
| Emergent   | <i>Sagittaria latifolia</i>                     | Common arrowhead                           | 3                               |
|            | <i>Scheuchzeria palustris</i>                   | Hardstem bulrush                           | 5                               |
|            | <i>Scheuchzeria palustris</i>                   | Three-square rush                          | 5                               |
| FL         | <i>Najas variegata</i>                          | Spatterdock                                | 6                               |
|            | <i>Najas odorata</i>                            | White water lily                           | 6                               |
| FL/E       | <i>Sparganium eurycarpum</i>                    | Common bur-reed                            | 5                               |
| Emergent   | <i>Chara</i> sp.                                | Muskgrasses                                | 7                               |
|            | <i>Ceratophyllum demersum</i>                   | Cornell                                    | 3                               |
|            | <i>Elodea canadensis</i>                        | Common waterweed                           | 3                               |
| Submergent | <i>Myriophyllum sibiricum</i> x <i>spicatum</i> | Northern x Eurasian water milfoil (hybrid) | Exotic                          |
|            | <i>Hydrilla verticillata</i>                    | Spine-root                                 | 5                               |
|            | <i>Potamogeton foliosus</i>                     | Leafy pondweed                             | 6                               |
|            | <i>Stuckenia pectinata</i>                      | Sago pondweed                              | 3                               |
|            | <i>Vallisneria spiralis</i>                     | Wild celery                                | 6                               |

FL = Floating Leaf  
FL/E = Floating Leaf and Emergent

### Eurasian water milfoil

- First discovered in 2009 by district members
- Onterra mapped ~13 acres of EWM in 2009
- Proposed whole-lake liquid 2,4-D treatment for 2010
- Herbicide applications completed by Bonestroo on May 17, 2010
- Residual herbicide monitoring at 4 sampling locations

### 2010 Treatment Results

- Initially, treatment appeared highly effective
  - Quantitatively, EWM decreased in occurrence by a statistically valid 44.9%
- Later in summer, EWM rebounded; increased density

### 2010 Treatment Results Continued Residual Herbicide Monitoring

- 0.277 ppm 1 day following treatment
- 0.300 ppm 16 days following treatment
- Likely mixed to 15 feet
- With concentration/exposure time, should have seen better EWM control (60-75% reduction)
- Treatment deemed unsuccessful
  - High pH?
  - Filamentous algae?
  - EWM genetics?

### 2011 EWM Monitoring

- No treatment conducted in 2011 due to unknown reason(s) as to why 2010 treatment was unsuccessful
- Repeat of whole-lake PI survey found EWM occurrence same as in 2010
- DNA testing revealed EWM is hybrid (Northern x Eurasian)
- ~600 live EWM specimens sent to SePRO & USACE for resistance testing
  - Results expected in winter 2012
- Once we have results, move forward on specific future treatment strategy

### Conclusions

- Water quality is fair.
  - High phosphorus values resulting mainly from internal nutrient loading.
  - Remedies for internal nutrient loading need to be considered after more specific studies are completed.
- Watershed
  - The district has made great strides at reducing external phosphorus sources.
  - Need to continue to reduce sedimentation from runoff which maintains internal load capacities.
  - Majority of shoreline is in urbanized condition; restoration may improve water quality and increase wildlife habitat.
- Aquatic plant community
  - Based upon standard analysis, native community is of lower quality than other lakes within the ecoregion and the state
    - Likely a result of water quality, EWM infestation, and human shoreline development.
  - Eurasian water milfoil is the primary concern.

### Shoreland Assessment

- Shoreland area is important for buffering runoff and provides valuable habitat for aquatic and terrestrial wildlife.
- It does not look at lake shoreline on a property-by-property basis.
- Assessment ranks shoreland area from shoreline back 35 feet

|                                  | <b>43</b>    | <b>100.0</b> |

**#2 How many days each year is your property used by you or others?**

|                    |       |
|--------------------|-------|
| Answered Question  | 38    |
| Average            | 162.1 |
| Standard deviation | 153.0 |

**#3 How long have you owned your property on English Lake?**

|             | <b>Total</b> | <b>%</b>     |
|-------------|--------------|--------------|
| 1-5 years   | 9            | 22.5         |
| 6-10 years  | 5            | 12.5         |
| 11-15 years | 8            | 20.0         |
| 16-20 years | 3            | 7.5          |
| 21-25 years | 4            | 10.0         |
| >25 years   | 11           | 27.5         |
|             | <b>40</b>    | <b>100.0</b> |

**#4 What type of septic system does your property utilize?**

|                           | <b>Total</b> | <b>%</b> |
|---------------------------|--------------|----------|
| Holding tank              | 23           | 59.0     |
| Conventional system       | 11           | 28.2     |
| Mound                     | 3            | 7.7      |
| Do not know               | 2            | 5.1      |
| Advanced treatment system | 0            | 0.0      |
| Municipal sewer           | 0            | 0.0      |
|                           | 39           | 100.0    |

**#5 How often is the septic tank on your property pumped?**

|                       | <b>Total</b> | <b>%</b> |
|-----------------------|--------------|----------|
| Multiple times a year | 16           | 43.2     |
| Once a year           | 5            | 13.5     |
| Every 2-4 years       | 12           | 32.4     |
| Every 5-10 years      | 0            | 0.0      |
| Do not know           | 4            | 10.8     |
|                       | 37           | 100.0    |

**#6 How many years ago did you first visit English Lake?**

|                    |      |
|--------------------|------|
| Answered Question  | 41   |
| Average            | 32.6 |
| Standard deviation | 21.2 |

**#7 For how many years have you fished English Lake?**

|                    | <b>Total</b> | <b>%</b>     |
|--------------------|--------------|--------------|
| Never              | 15           | 35.7         |
| 1-2 years          | 2            | 4.8          |
| 3-5 years          | 3            | 7.1          |
| 6-10 years         | 2            | 4.8          |
| More than 10 years | 20           | 47.6         |
|                    | <b>42</b>    | <b>100.0</b> |

**#8 Have you personally fished on English Lake in the past 3 years?**

|     | <b>Total</b> | <b>%</b>     |
|-----|--------------|--------------|
| Yes | 22           | 64.7         |
| No  | 12           | 35.3         |
|     | <b>34</b>    | <b>100.0</b> |

**#9 How would you describe the current quality of fishing on English Lake?**

|               | <b>Total</b> | <b>%</b>     |
|---------------|--------------|--------------|
| 1 - Very Poor | 5            | 16.1         |
| 2 - Poor      | 12           | 38.7         |
| 3 - Fair      | 10           | 32.3         |
| 4 - Good      | 3            | 9.7          |
| 5 - Excellent | 1            | 3.2          |
| U - Unsure    | 0            | 0.0          |
|               | <b>31</b>    | <b>100.0</b> |

**#10 How has the quality of fishing changed since you started fishing on the lake?**

|                       | <b>Total</b> | <b>%</b>     |
|-----------------------|--------------|--------------|
| 1 - Much worse        | 7            | 23.3         |
| 2 - Somewhat worse    | 11           | 36.7         |
| 3 - Remained the Same | 3            | 10.0         |
| 4 - Somewhat better   | 0            | 0.0          |
| 5 - Much better       | 2            | 6.7          |
| U - Unsure            | 7            | 23.3         |
|                       | <b>30</b>    | <b>100.0</b> |

**#11 What types of watercraft do you currently use on the lake?**

|  | <b>Total</b> |
|--|--------------|
| Paddleboat                               | 30           |
| Canoe/Kayak                              | 22           |
| Pontoon                                  | 18           |
| Motor boat with greater than 25 hp motor | 15           |
| Rowboat                                  | 8            |
| Motor boat with 25 hp or less motor      | 6            |
| Jet ski (personal water craft)           | 4            |
| Do not use watercraft                    | 4            |
| Sailboat                                 | 3            |
| Jet boat                                 | 0            |

**#12 In general, would you say the safety practices of boaters on English Lake are:**

|               | Total | %     |
|---------------|-------|-------|
| 1 - Poor      | 3     | 7.1   |
| 2 - Far       | 11    | 26.2  |
| 3 - Unsure    | 1     | 2.4   |
| 4 - Good      | 22    | 52.4  |
| 5 - Excellent | 5     | 11.9  |
|               | 42    | 100.0 |

**#13 When, if at all, are you aware of unsafe boating practices?**

|                        | Total | %     |
|------------------------|-------|-------|
| 1 - On holidays        | 19    | 37.3  |
| 2 - On weekends        | 20    | 39.2  |
| 3 - During the daytime | 3     | 5.9   |
| 4 - All the time       | 0     | 0.0   |
| 5 - Never              | 9     | 17.6  |
| 6 - Some other time    | 3     | 5.9   |
|                        | 51    | 100.0 |

**#14 Do you believe adoption of slow-no-wake hours are needed to improve boater safety on English Lake?**

|                    | Total | %     |
|--------------------|-------|-------|
| 1 - Definitely yes | 9     | 21.4  |
| 2 - Probably yes   | 8     | 19.0  |
| 3 - Unsure         | 7     | 16.7  |
| 4 - Probably no    | 9     | 21.4  |
| 5 - Definitely no  | 9     | 21.4  |
|                    | 42    | 100.0 |

**#15 When, if at all, would you suggest that slow-no-wake restrictions be applied?**

|  | <b>Total</b> |
|--|--------------|
| Within a certain distance of the shoreline | 16           |
| On Sunday                                  | 15           |
| During certain hours of the day            | 13           |
| During high water levels                   | 11           |
| Some other specific day of the week        | 2            |
| During low water levels                    | 1            |
| Under other conditions                     | 1            |

**#16 Please rank up to three activities that are important reasons for owning your property on or near the lake.**

| 4             |            |                      | Would Like to see only cottage/home owners on Sunday. No Outsiders |                             |  |             | Snails (don't know what kind) |  |  | Many years ago a property owner sprayed in front of each home and weeds were controlled. This year it is almost impossible to get a boat away from dock to open water due to excessive weeds and green algae. On top of this, it also prohibits swimming from shore to raft. We need to get weeds under control!! Some of the boats on the lake on the weekends do not belong on a small inland lake. Some pass in front of the property and waves just about knock you over if standing on shore and if children or adults are in water, the wake scares you to death. Motors need to be limited to HP size and Size of boat. Many that come are made for Lake Michigan, not our lake. |
| 5             |            |                      |  |                             |  |             |                               |  |  |   |
| 6             |            |                      |  |                             |  |             |                               |  |  | We need a day off from high speed boating, preferably on Sunday. 6 days a week should be enough for fast boating. We also need a constable with ticket writing authority for boating infractions.   |
| 7             |            |                      |  | before 11am, after 6pm      |  |             |                               |  |  |   |
| 8             |            |                      |  |                             | Leave as is, if it ain't broke don't fix it! |             |                               |  |  |   |
| 9             |            |                      |  |                             |  |             |                               |  |  | Closing the lake is not an option, but I think I would like to see more opportunities for the property owners to have the lake to themselves and not have to fight all the other boat traffic.  |

| 37            |            |                      |  |                             |  |             |                               |  |  |   |
| 38            |            |                      |  |                             |  |             |                               |  |  | I feel the overall water quality has declined drastically in the last 5 years   |
| 39            |            |                      |  |                             |  |             |                               |  |  | We Love the lake and the people that live on or own property. We are blessed with some good dedicatedhard workers. We would like to see less wake hours and more no-wake hours. The lake is small. We would like to see some people who live in the english lake inn on union road-CLEAN UP.  |
| 40            |            |                      |  | 6pm - 11am                  | more monitoring of public use.               |             |                               |  |  | As a kid living on the lake algae and plant growth was maintained with chemical application every spring and possibly in 2 more times during summer. There was more fish and clear water and that was even with farm run-off, imagine that! Now the lake seemsto be filling in with plant growth under and shoreline overgrowth around. It is starting to close off the lake which is I suppose the "natural" process. But, if this is allowed eventually it will all be like living on a swamp. We need Chemical treatment to stunt the growth. With owning a small pond and using more natural chemicals, I know this is possible.  |
| 41            |            |                      |  | 5pm-11am                    |  |             |                               |  |  |   |
| 42            |            |                      | Saturday   | noon-3pm                    |  |             |                               |  |  |   |
| 43            |            |                      |  |                             |  |             |                               |  |  | Would like limit on motor sizes and much shorter hours for motor boats can wreck the lake more than it already is.  |

### Watershed Analysis WiLMS Results

**Date: 11/3/2011 English Lake Current**

Lake Id: English\_Current

Watershed Id: 0

**Hydrologic and Morphometric Data**

Tributary Drainage Area: 81.0 acre

Total Unit Runoff: 7.60 in.

Annual Runoff Volume: 51.3 acre-ft

Lake Surface Area &lt;As&gt;: 51.0 acre

Lake Volume &lt;V&gt;: 1836.0 acre-ft

Lake Mean Depth &lt;z&gt;: 36.0 ft

Precipitation - Evaporation: 3.2 in.

Hydraulic Loading: 86.6 acre-ft/year

Areal Water Load &lt;qs&gt;: 1.7 ft/year

Lake Flushing Rate &lt;p&gt;: 0.05 1/year

Water Residence Time: 21.21 year

Observed spring overturn total phosphorus (SPO): 112.0 mg/m<sup>3</sup>Observed growing season mean phosphorus (GSM): 46.8 mg/m<sup>3</sup>

% NPS Change: 0%

% PS Change: 0%

English Lake, Herbicide Residual Summary 2010 – Draft v.1

## **Draft: English Lake, Manitowoc County, Residual Monitoring Results, 2010**

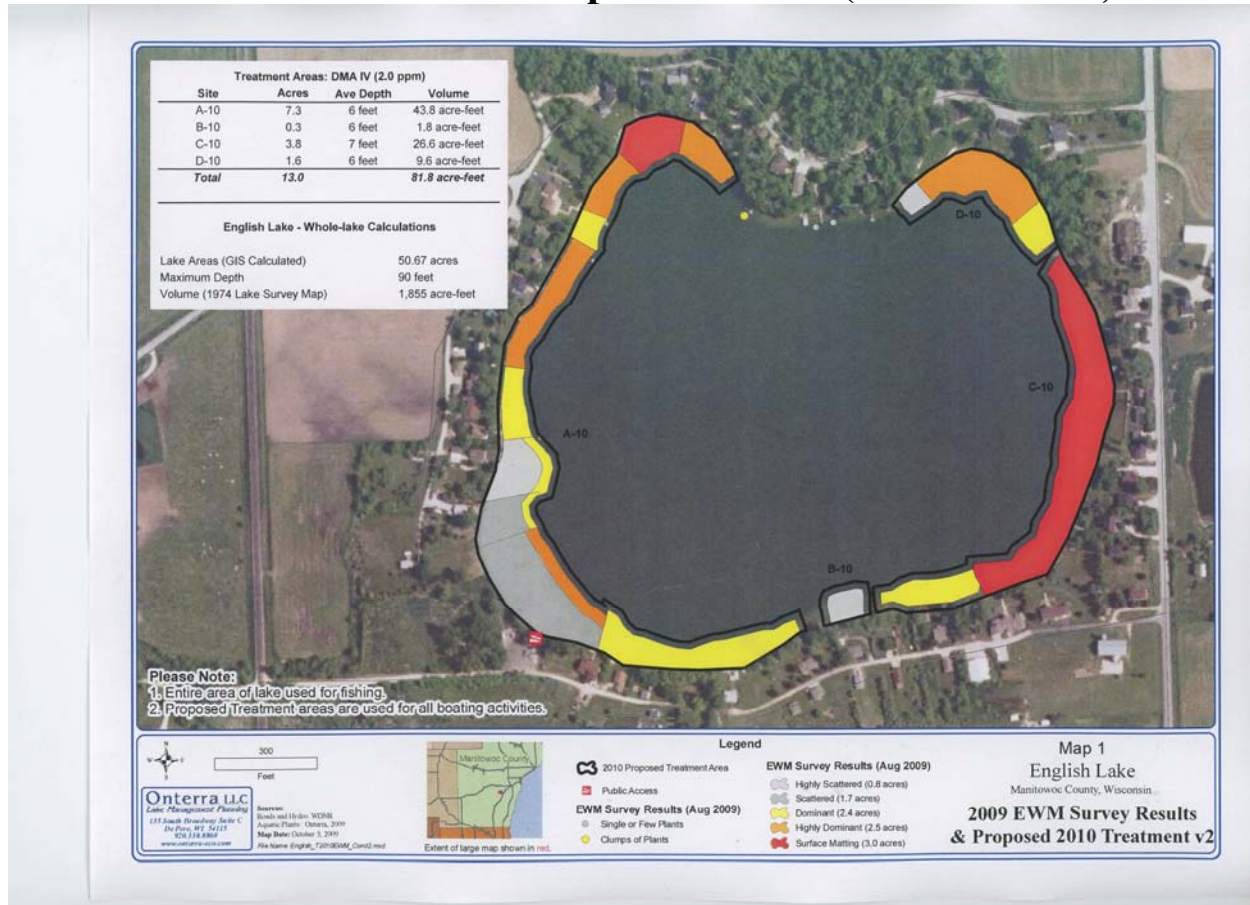

**John Skogerboe  
US Army Engineer Research and Development Center**

A liquid formulation of 2,4-D was applied to English Lake at a target concentration of 2000 ug/L ae (Figure 1) on 13 May 10. English Lake is 49 acres and has a maximum depth of 90 ft. Based on water temperature and dissolved oxygen data collected by Onterra LLC, English Lake was stratified at 25 to 30 ft. A target whole lake concentration was calculated to be 300 ug/L ae assuming no dissipation of 2,4-D below 25 ft. Four herbicide residual sample locations were located in the lake, three in treated areas (ENG2, ENG3, and ENG4) and one in a deep untreated location (ENG1) (Figure 2). Sampling was conducted by lake volunteers at pre-determined sample intervals (Table 1). Water samples were collected at mid depth in the shallow, treated locations (ENG2, ENG3, and ENG4). Water samples were collected at depths of 5, 15, 25, 35, and 55 ft at the deep sample site (ENG1). Following completion of each sample interval, 2-3 drops of muriatic acid were added to the sample to fix the herbicide.

Concentrations of 2,4-D in treated and untreated areas were similar by 1 day after treatment (DAT) (Figure 3). Concentrations at depths  $\geq 25$  feet were at the detection limit of 10 ug/L ae indicating that 2,4-D did not dissipate beyond the target depth (Figure 4). The mean lake wide concentration at 1 DAT was 277 ug/L ae compared to the target concentration of 300 ug/L ae. The mean lake wide concentration for all sites, 0 to 9 DAT was 286 ug/L ae and did not reach the irrigation restriction limit of 100 ug/L ae until approximately 26 DAT.

Based on point intercept data collected by Onterra LLC, percent control of Eurasian watermilfoil was only 49% which was less than might be expected given the 2,4-D concentrations and exposure times. Eurasian watermilfoil was reported to be heavily covered with filamentous algae which may have adversely affected control. Other factors that should be investigated are hybrids, and water chemistry such as pH.

WDNR 2006 Fisheries Survey Report

DATE: [Click [here](#) and type date]FILE REF: [Click [here](#) and type file ref.]

TO: English Lake File

FROM: Steve Hogler  
Steve Surendonk

SUBJECT: Fall 2006 Electrofishing Survey of English Lake

**Background of English Lake:**

English Lake is a 51 acre lake located seven miles southwest of the City of Manitowoc that experiences heavy boating and moderate angling activity. It is a seepage lake with a maximum depth of 80 feet. Its water is clear and hard, and the lake bed is mostly muck with scattered gravel deposits. Much of the English Lake shoreline is developed with cottages and year-round residences.

**Fish Survey History:**

The fishery of English Lake has undergone substantial changes in the past sixty years as documented by past surveys. Surveys in the 1940's found that bluegill were the dominant panfish and that they exhibited excellent growth. Walleye were the dominant gamefish, and grew near statewide averages. Few northern pike and no largemouth bass were collected. It was recommended to discontinue stocking bass into this lake. Surveys conducted in the late 1950's found fair to good numbers of northern pike and bass, but fair to poor numbers of walleye. It was felt the walleye population was maintained by stocking because of the lack of suitable spawning habitat. Yellow perch was the dominant panfish. Electrofishing surveys in the 1960's found good numbers of walleye, but low numbers of bass, bluegill and crappie. A large number of yellow perch were collected, but were small in size.

By the 1970's small, slow growing black crappie dominated the fishery. During 1977, fyke nets were used to thin the populations of black crappie and black bullhead found in the lake. A total of 57,049 black crappie, and 5,609 black bullhead were removed during this effort. Following the removal effort, yellow perch, largemouth bass and walleye were stocked to add predation pressure on young of the year crappie. Surveys conducted in the 1980's found that largemouth bass and walleye were the most common gamefish. Black crappie were numerous and dominated the panfish catch. Bluegill, yellow perch and black bullhead were also captured but in much lower number.

In 1995, a comprehensive fish survey was conducted to assess the fish populations of the lake. Largemouth bass were found to be the dominant predator. Northern pike and walleye were also captured during surveys but in low numbers. Black crappie were the dominant panfish catch in this survey and were small in size. Bluegill and yellow perch were also captured but in substantially lower numbers.

**2006 Survey Results:**

The entire 1.13 mile shoreline of English Lake was electroshocked on the night of October 9<sup>th</sup> using pulsed DC current. An attempt to net all fish was made and all captured fish were measured to the nearest 1 mm. Scales for age analysis were collected from largemouth bass and bluegill at the rate of 10 per centimeter group.

During the 31 minutes of shocking, 181 individual fish representing nine species were captured (Table 1). Total CPE was 362 fish per hour or 160.2 per mile shocked. Largemouth bass dominated the catch with substantially fewer individuals of other species captured. CPE for largemouth bass CPE was 280/hour or 123.9/mile shocked. Bluegill, the second most abundant species, had a CPE of 66 per hour or 29.2 per mile shocked.

**Table 1. Length frequency of captured fish from English Lake caught during electroshocking on the night of October 9, 2006.**

| Length (mm) | Largemouth Bass | Northern Pike | Walleye | Bluegill | Rock Bass | Yellow Perch | Green sunfish |

## Gamefish

Largemouth bass were the dominant gamefish captured. The 140 bass ranged in length from 77 mm to 437 mm and had an average length of 243 mm. Fourteen bass (10.0%) of captured bass were greater than the 14 inch minimum size limit. When scales were aged, age classes from young of year to age 8 and age 10 were detected (Table 2).

**Table 2. Age distribution of largemouth bass in English Lake.**

| Length (mm) | Total | 0+   | 1+   | 2+   | 3+   | 4+   | 5+   | 6+   | 7+  | 8+  | 9+ | 10+ |

Age 2 fish were the most common age bass captured, but age 3 and age 4 were also common. When compared to statewide length at age averages, bass in English Lake grew at less than average rates at all ages (Table 3). Younger aged fish showed the largest departure from average length, while older fish were closer to an average largemouth bass of equal age.

**Table 3. Average length at age for largemouth bass and bluegill captured in English Lake during fall electroshocking. Statewide average lengths at age for largemouth bass and bluegill are in (). Since little growth will occur until January 1, fall fish are placed into the next whole age category (1+ fish are placed into the age 2 category) for comparative purposes.**

|                 | Age        |              |              |              |              |              |              |              |
|-----------------|------------|--------------|--------------|--------------|--------------|--------------|--------------|--------------|

| Largemouth Bass | 91<br>(97) | 147<br>(165) | 195<br>(229) | 269<br>(290) | 323<br>(338) | 380<br>(383) | 400<br>(414) | 400<br>(447) |
| Bluegill        | 87<br>(64) | 128<br>(97)  | 160<br>(122) | 180<br>(147) |              |              |              |              |

Northern pike and walleye were also captured, but in low number. Captured walleye averaged 493 mm in length and the single northern pike was 520 mm in length.

### Panfish

Bluegill were the most common panfish captured during this survey. The thirty-three bluegill ranged in length from 75 mm to 210 mm and had an average length of 152 mm (Table 1).

When scales were aged, age classes 0+ through 3+ were detected in the sample (Table 4). Age 2+ was the most common age bluegill and these fish had an average length of 160 mm. Only five bluegill were older than age 2+.

**Table 4. Age distribution of bluegill captured on English Lake during fall electroshocking.**

| Length (mm) | Total | 0+   | 1+  | 2+   | 3+   |
|-------------|-------|------|-----|------|------|

When compared to statewide length at age averages, bluegill in English Lake were longer at each age than an average bluegill from other lakes in Wisconsin.

Other captured panfish included rock bass, yellow perch and green sunfish. The lengths of these fish were 130 mm, 280 mm and 180 mm respectively.

## **Discussion and Conclusions:**

### Gamefish

Largemouth bass were the dominant gamefish captured during electrofishing in 2006. This was similar to the 1995-96 comprehensive survey when during fall electroshocking bass dominated the gamefish catch. Unlike the previous survey in which YOY bass dominated the catch, in 2006 ages 2, 3 and 4 were the most common ages. In addition, average length and the number of fish greater than 14" increased in 2006 from what was measured in 1995-96. It is likely catch and release and 9 more years of the 14" minimum size limit increased average size and the age of bass in English Lake.

Length at age of bass in 2006 was less than in previous surveys. With more bass protected by the 14" size limit, increased predation pressure on limited forage may be causing growth to slow. The bass population should be monitored to see if current population trends continue.

Walleye and northern pike continue to be present in the lake but in low numbers. This is similar to what was seen in 1995-96. Limited spawning habitat will always limit their populations in English Lake.

### Panfish

Bluegill dominated the panfish catch in 2006. Bluegill in 2006 were young in age, but were fast growing. It is likely that predation by gamefish has reduced bluegill number thus reducing competition for food resources. Because English Lake has a small littoral area that limits the reproduction of bluegill and other panfish, we should monitor panfish numbers to determine if predation is too great to maintain a healthy bluegill population.

Clearly there is marked difference between surveys conducted in the 1970's and the present. Earlier surveys found a lake that was dominated by slow growing overabundant panfish, chiefly black crappie. Major predators in the lake were walleye and northern pike. Largemouth bass were infrequently collected. Black bullhead were also abundant in the system. This survey and the comprehensive survey of 1995-96 have documented a shift in the primary predator from walleye to largemouth bass. Panfish which were overabundant and slow growing are now much lower in number and exhibiting good growth.
