

Region <u>WCR</u>	County <u>Adams</u>	Report Date <u>9/2000</u>	Classification <u>(FAL)</u>
Water Body: <u>Wisconsin River, Trib to</u>			
Discharger: <u>Chula Vista</u>			

If stream is classified as Limited Forage Fish (LFF) or Limited Aquatic Life (LAL), check any of the following Use Attainability Analysis factors that are identified in the classification report:

- Naturally occurring pollutant concentrations prevent the attainment of use
- Natural, ephemeral, intermittent or low flow conditions or water levels prevent the attainment of the use, unless these conditions may be compensated for by the discharge of sufficient volume of effluent discharges without violating State water conservation requirements to enable uses to be met
- Human caused conditions or sources of pollution prevent the attainment of the use and cannot be remedied or would cause more environmental damage to correct than to leave in place
- Dams, diversions or other types of hydrologic modifications preclude the attainment of the use, and it is not feasible to restore the water body to its original condition or operate such modification in a way that would result in the attainment of the use
- Physical conditions related to the natural features of the water body, such as the lack of a proper substrate, cover, flow, depth, pools, riffles, and the like, unrelated to water quality, preclude attainment of aquatic life protection uses
- Controls more stringent than those required by sections 301(b) and 306 of the Act would result in substantial and widespread economic and social impact

Supporting Evidence in the report (include comments on how complete/thorough data is)

- Biological Data (fish/invert) _____
- Chemical Data (temp, D.O., etc.) _____
- Physical Data (flow, depth, etc.) _____
- Habitat Description _____
- Site Description/Map _____
- Other: _____

Historical Reports in file:

9/7/2000 - Marc Haruga

Additional Comments/How to improve report:

-insufficient data, SD memo recommends FAL class'n.

SUBJECT: Justification of Removing from NR104

Currently, the unnamed tributary to the Wisconsin River that would receive a discharge from Chula Vista is listed as an addition to NR104. The current proposed classification for the tributary is Limited Aquatic Life (LAL).

After reviewing the facility file, there is insufficient data available to add this tributary to the list of variance streams in NR 104. According to Joe Behlen, the facility will also be discharging directly to the Wisconsin River and will no longer discharge to the unnamed tributary.

Therefore, the LAL classification for the unnamed tributary in NW SE T14N R6E S28 should not be added to NR 104, resulting in the default classification of Fish and Aquatic Life to remain in effect.
